I'm a software engineer specializing in Macintosh development, and I've been a ham since 1982. I was first licensed at age 14, and I now hold an Extra class license. My expertise is in antenna-building and theory, CW (Morse Code), DXing, SWLing, and HF operating practices in general. I also operate mobile in a '96 Ford Ranger pickup. I'd be happy to help any new or aspiring amateur radio operators.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

The Netherlands CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

* Volunteer Examiner (WCARS VEC)

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emeregency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Cordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

* Radio Officer and Chairman of Operations Committee for Lycoming County, Pennsylvania ARES/RACES/SKYWARN program
* Assistant EC for my local district, and Pennsylvania State Director for NACEC

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a

Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

Send me an E-mail message with the words "HAM FAQ" on the subject line
(or packet with your E-mail address) if you want the FAQ text file
sent to you as an attached 120 KB file.

Send me a formatted disk with SASE disk mailer if you want the FAQ
text file sent to you on disk. PC or Mac formats are fine.

(The majority of the original content of the FAQ remains the same, but
now it's a hypertext document with hundreds of links to radio-related
sites and is a significant resource to all students of amateur radio -
regardless of their license status.)

Maintainer of Digital Storage Scope FAQ

http://www.primenet.com/~ke7gh/

Owner of BitBucket Mailing List

BitBucket is a mailing list (reflector) devoted to specialized amateur radio communication techniques such as:

* SSTV, ATV, FAX, APT, DSP
* Packet, Pactor, GTOR, Clover, RTTY
* R/C, Telemetry, Balloons, Rockets, Robotics
* homebrew, modifications, interfacing, widgets, etc

To subscribe, send E-mail to:

majordomo@primenet.com

and in the BODY of the message, write:

SUBSCRIBE bitbucket

As we encourage the free exchange of ideas, if you pay for E-Mail service by the byte you may want to consider carefully before subscribing.

BitBucket has NO organizational sponsors (I pay for it myself).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio
examinations on-line. The written examinations for all five classes,
novice through extra, can be generated complete with figures, filled
in on-line, and then graded. The results are presented
question-by-question, and also graphically by subelement, so that
users can identify areas which require further study.

More advanced options include saving the results of each examination a
user takes on-line. These results can be used to monitor progress and
also as a basis for generating exams tailored to a user's needs,
ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the Hamband DX'er for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

+
+ I have scratch-built all my antennas for all bands, written antenna
+ programs, and experimented with many types of antennas over the past
+ 38 years. I have been a ARRL VE for 5 years now, as well as team
+ leader. I started in computers by building the Altair in about 1968,
+ later switched to Radio Shack. In 1982, I started assembling Clones,
+ and still do to this day (for a living). I have written code in Basic,
+ Quick Basic and C.
+
+ I have built power supplies, both low-voltage-high-amperage and
+ hi-voltage-low-amperage. I have wound my own transformers, one of
+ which still runs my VHF station after 20 years of use.
+
+ It is very hard to pin-point what one knows, as we are constantly
+ learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting
tapes (especially Callsign tapes) from the Department of Commerce
National Technical Information Service (NTIS) or wanting other info on
callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise,
really!

My job is currently System Administrator for a large UNIX site so I
know a little bit about day-to-day UNIX operations and UNIX
installation :-) I also have much experience with constructing E-mail
paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software
interfacing and machine control.

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration,

sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

2307. Group to split

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-05 00:00:00 UTC
From: Al Gerheim <gerheim@sonalysts.com>
Message-ID: <336DEC9D.7DE8@sonalysts.com>
Source record: 199025

For those of us with Netscape news readers, who cannot use
kill files, I would like to propose that this group be split.

We would be forming 2 new groups:

rec.radio.amateur.misc.cw
rec.radio.amateur.misc.burt

The first one would be used by those wishing to debate the
usefulness of CW, and the other would be used by Burt and
MNManiac.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* What is an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* How may I contribute to the Elmers List?

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I

really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the

novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of
rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

QEX Editor

Digital Signal Processing (DSP)

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at
this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases

floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

Code is the core of the hobby? I don't think so. It may be the core of what ham radio is to you, but it certainly isn't the core of what ham radio means to many other people.

As for simply dropping the code discussion because you demand so, goodness, that is a level of arrogance that even I haven't attained yet ;-).

>www.edns.net and let me know if you are interested.

I registered the .ham top level domain and am offering free registration
for those of you who have your own servers (real or virtual). For
instance, if you are presently www.n1lsj.org you can now be
www.n1lsj.ham. If you have access to a mail server you can be something
like ron@n1lsj.ham .

Also, if one of you (or an organization out there) is running a mail
server and want to volunteer (I don't have the time) to do mail
forwarding for people, let me know!

Take care,
Ron N1LSJ

>When CW diminishs to be a popular HF mode, surpassed by other modes
>(such as up-and-coming digital modes) then it is entirely reasonable to
>replace the CW examination with an examination on another mode.

Well then I guess it should have been replaced by a SSB test series quite
some time ago then - in view of the fact that SSB is at least twice
as popular as CW. But since rules and laws are not written pursuant to
the results of popularity contests, there must be another explanation for
the persistance of the code exams.

I would suggest the real reasons are stubbornness and fear. Are we going
to allow ourselves to be guided into the future by relying upon such
ignoble traits? Have we so little self-esteem as a group, and so little
faith in the integrity of the service that we can never rid ourselves of
the vestigial residue of an earlier time? Our we so unimaginative that we
cannot properly define a relavent set of operator qualifications?

I think the answer to both questions is certainly NOT! We need only put
aside our emotional attachments to the past, and look toward the future in
fullfilling the charter goals of the service. Hams are no longer required
to use Morse code in order to communicate, and likewise need not be
required to know it. And as long as it continues to be useful, hams will
continue to use it as an optional mode. Let us allow the era of the
telegraph operator to pass into history with quiet dignity, and not bring
about the necessity to force him kicking and screaming disgracefully into
retirement.

>and thats why most people piss and moan about it.

Pissing and moaning would not seem to be unique to those against the code test. Only difference is, one group pisses and moans about people, the other about unnecessary rules. Learning code, for most, requires no more effort and commitment than does mowing the lawn or cleaning the toilet on a regular basis. It is a remedial task which is superflous to the majority of activities in amateur radio.

I find it amazing that some still continue to insist that amateur radio must maintain some form of manual labor in it's testing requirements.

I quite prefer operating CW to cleaning the toilet, but making such a choice does not endear me to my spouse. :-)

But this is not a trial, thus such nostrums do not apply. What is being discussed is under what circumstances is the government empowered to insist that an individual must demonstrate ability in Morse code prior to being granted the authorization to operate on any of the amateur allocations below 30 MHz. Since Morse code knowledge no longer is used as a tool for the mitigation of interference, as evidenced by the lack to compulsory use by the government, the need for Morse code testing is no longer there. Now, that does not mean that there are those who think that Morse code should be mandatory because of other reasons, i.e. a method for imposing self-discipline, facilitates international communications, etc. Regrettably, these reasons that are often proferred by the pro-code testing advocates have nothing to do with the government's legitimate concerns for those who use the amateur service frequencies.

>>Business can no longer license on that band, but
>>existing business is grandfathered.

As I originally stated, the GMRS would be an EXCELLENT choice fot this guy's small business. Each operator (unless they're all family members residing in the same household) MAY discuss transmit "business" communications on the GMRS:

FEDERAL COMMUNICATIONS COMMISSION RULES
PART 95, SUBPART A
Personal Radio Services
GENERAL MOBILE RADIO SERVICE (GMRS)

GENERAL PROVISIONS

95.179 Individuals who may be station operators.

(a) An individual GMRS system licensee may permit his/her immediate family members living in the same household to be station operators in his/her GMRS system. They may communicate messages about the licensee's personal activities and about the licensee's business activities...

---and---

95.181 Permissible communications.

(a) A station operator for an individual who is licensed in the GMRS (other than an employee of that individual) may communicate two-way voice messages concerning the licensee's personal or business activities (see 95.179).

I have found a SIMPLE yet cost effective way of shielding

i have 2 pc's in my shack an the NOISE is at a bearable level..not
eliminate but bearable 2-4 to s-6 on my icom 751.

I bought some screen door screen and then went to a local factory
and procured about 5 lbs of old used LEAD..melted the lead in a lead
melter..old fishing buddy had one who makes fishing lures..

pulled cases off the monitors an puters layed screen in the cases and
tapped stainless screws so screen would stay put..then poured hot lead
on screen in side case...makes for a very heavy case an pretty well
shielded..not 100% but good enough to live with till i come up with
something better..cost about 50 bucks all togather for both..
1 is a ibm clone 8088 running a 4 mhz and the other is a ibm clone with
a pentium chip at 90 mhz and both monitors are svga..

I think jbjr was talking about a sample test over the Internet, rather
than than the real thing. You would take this to assess oneself and see
if one was ready for the actual test. Thus there are no problems with
cheating.

Masa (masa@writeme-x.com) wrote:
: if you can take a test over the internet, then the people can cheat
: easily.

I am studying right now. And my observations are ...

First, The internet is not the only place to find these question and answer things. I can not be sure that they are from the genuine list of questions, but I was told by one person that "such and such book" is just that. It is a list of all the possible questions. All I had to do was to memorize that book! Even the book I have, "Now Your Talking" has a list of questions in the back as a test to see if you are absorbing the content. Now, I do not know if those are the real questions, but I am under the impression that they are. But, that does not mean it is cheating. Remember, you only get a percentage of the full test anyhow.

This leads me to part Two. There are 550 (five HUNDRED and fifty) questions in the novice and tech tests combined! I don't know about you, but the process of memorizing that many answers was hard for me when I was young and had active brain cells. I have difficulty remembering where I put my pencil ten minutes ago. I could never memorize that many questions.

To be able to remember that many things takes more than just memorization. Or, anyhow that would be the theory. Ah, that is it, learn the thoery, and the questions will make sense, and you will know the answer by understanding it. That is not memorizing, but it is learning.

I understand your concern about giving all the answers for someone to study ahead of time. But, if some poor soul has the wherewithall to memorize that many questions and answers without understanding what they mean, I bow down to their mental powers. It is something I could never do!!

Because there are too many good coders out there and no company in their
right mind would sign a royalties agreement when they can pay a fixed
price for a software product.

> You can talk all day about "work for hire" but I still think all the talk
> about intellectual property rights is just another money grab by large corporate
> interests.

Haw haw, money grab? So during the 6 months or year that it may take to
develop a software product, who is paying the mortgage, hospitalization,
and providing the hardware? money grab?

> There would be NO talk of this if software creation was treated like an art,

Ahh yes, then we could call them "starving software artists" and they
could write their code on street corners for money. Or mabye they could
get lucky and find a good manager, he could book them a gig at Motorola
or Microsoft. Of course he get's his 10%.

> with such common niceties as CREDIT to the actual writers, and ROYALTY agreements. A
> multimillion dollar movie credits even the manufacturers of the film and cameras, but >
in a similarly sized software project any credit to anybody is hidden, at best.

This isn't Hollywood, if you don't want to write code without getting a
royalty don't write it. Someone else will be glad to do it for a steady
paycheck.

This issue has been around for years, the idea of "enforcer" cadres for
amateur radio. Maybe people have been watching too much "reality" TV
suchs Cops, Rescue 911, or Real Stories of the Highway Patrol and think
maybe what works there should work just fine in amateur radio. So let's
give our enforcer wannabes the same power as many of the alphabet soup
federal agencies and go and kick in some doors and confiscate property
without any due process constraints. One advocate of the enforcers even
called for them to have the powers of arrest and the ability to hold
those suspected of rules violations or malicious interferance to be held
without bail for up to 30 days. (supposedly useful in isolating the
source of these problems because as more people are detained, the
interferance level should drop) This same individual went on to propose
that amateurs be required to waive their 4th and 6th amendment rights as
a condition of accepting a license. The real problem with these "zero
tolerance" schemes and amateur radio SWAT teams is that in all likelyhood
they would be used to carry out cheap political agendas and personal
vendettas. Just look at the seamy world of repeater coordination,
political agendas, vendettas, and room-size egos all abound there. Now,
we're going to give these same people the power to ruin someone's life,
deprive them of their incomes, their families, and possibly more. I can
just see it, the door comes crashing down and a hoarde of helmeted
"enforcers" rushes in, "Hi, I'm Bob <callsign>, the leader of the area
enforcement team, we have it on good authority that you are causing
interferance, assume the position please, you're going to be our
"guest" for the next 30 days."

Fahrenheit 451 comes to amateur radio.

.......Fred K5ET

NEWS!!

2/2/97

N.B. MAJOR CHANGE!

Please note that MEGALIST has become TOO LARGE! The file has now been
broken down to
the following new categories (Same for the BUTTONS on my web site to
get the lists)

Sources for KITS and homebrew items may be found in the NEW FILE
MEGAKITS.TXT

Sources for PARTS and SUPPLIES and related things can be found in a NEW
FILE
called PARTSUPP.TXT

Sources for OLDER RADIOS for the ham radio community and related
information
can be found in a new file called BOATANCH.TXT

Sources for items related to antique radio receivers etc. can be found
in a NEW FILE
called ANTIQUES.TXT

Sources for items related to AM/FM/SW radios and SHORTWAVE supplies can
be
found in a NEW FILE called SHORTWAV.TXT

==========

DOWNLOAD FILES as:

antiques.txt
boatanch.txt
codehelp.txt
dealers.txt
dxshows.txt
manufact.txt
megakits.txt
manuals.txt
mods.txt
partsupp.txt
repairs.txt
shortwav.txt
swapnets.txt
tubes.txt
web-ham.txt
xtals.txt

OR click on the appropriate button at:
http://www.mnsinc.com/bry/

Why not take an EPIRB with you, instead? Various satellites (SARSAT)
monitor these beacon frequencies and can pinpoint your location for
the rescue folks.

Reminds me of a REQUIREMENT back in Texas when I was growing up. All the unwashed masses of no-coders born without a built-in beeper step to the vhf end of the bus. Nope, not allowed up front in the HF section with us lily-white beeping hams.

>who whine at the least provacation.

Well, Burt, time to call you on all your rediculous postings. You claim all these things about hams, but are unable to back any of them up. You constantly talk about guts, so why don't you show up at Dayton Hamvention and back up some of your prattle? For every ham you show me that's overweight, I will show you one in shape. For every boring ham you see, I will show you 3 that aren't. If you REALLY have the guts call in the Springfield repeater on your way through and announce that you are passing through from Massachusetts and see if you can get away without a friendly word or several. Come on Burt, put up or pipe down. Here is your chance. If I can not come through, I will publically apologize right here in front of everybody. SO, are you going to take me up on the offer? Heck, I'll even provide you a place to stay! Do you have the guts, Burt, or are you REALLY the UTH (Ultimate Typical Ham)?

It's past time to change the electrolitic capacitor, usually located in
the control box.

They are hard to find. United States Tower in Frederick, Maryland
stocks and sells them because the owner is a ham: K3LYW.

I need a small AM radio (or AM/FM) that either fits IN the ear (like a real small hearing aid) or one that hooks over the ear (the bulk of the radio behind the ear, w/an audio tube leading to the ear canal opening - like a large hearing aid). I want to be able to wear the radio without the "headset look" (just one earphone - unobtrusive). Only the AM band (560 - 1600 KHZ) is desired though AM/FM would be OK. I've been looking all over for such a radio, and I cannot find.

Any help?

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

Across the street from Hara Arena if you look closely just up the street, you will see the Orchard Lounge, aka Orchard Cultural Center. Each night at 9 p.m. Wednesday, Thursday, Friday and Saturday night during the Dayton Hamvention Dan Morgan and I will be uplinking a wild and crazy live radio show to SBS 6, transponder 13 upper, Ku band @ 6.2 wide band audio as well as to GE-1 transponder 7, C band at 7.56 wide band audio, on Thursday night. Dan and I will be taking and airing telephone calls from hams across the United States. I've heard tell that the Cultural Center will be selling breakfast and lunch as well as good food and beverage for dinner.

If you want to crash at a happenin' place during the Hamvention then walk across the street to the Orchard Cultural Center, especially at 9 p.m. each night. You can join us and we'll likely give you a chance to ham it up on a commercial broadcast satellite.

It depends on where it comes from, but here are some "first steps".

Pay attention to grounding and bonding of "floating" body parts,
such as the hood and trunk lid. Bond them to the body with a
flexible strap (coax braid works good for this). The exhaust system
often floats on rubber hanger parts.... bond it to the frame at a
couple of points, one on either side of the muffler is best, but at
a minimum ground the tail pipe.

Consider resistor type plugs and shielded plug wires.... check with
your car dealer BEFORE you try this, as it may impact your warranty.

Position your antenna away from the engine compartment as far
as practical.

Check with your dealer to see if they have service bulletins for
mobile radio interference, such as might be concerned with
law enforcement or taxi vehicles.

Good luck.

> 73,
> K4XA
> Graham Crosby

I don;t want to get invloved in this thread, but I needed to add to what
Graham has said about learning the code. I know a couple of EXTRA class
hams, who passed the code and the tests, but don;t know a damn thing about

Amateur Radio and couldn;t copy code at 5 WPM, let alone 20. Myself, on the other hand, am a General. I am working on my Advanced, but I refuse to just MEMORIZE the questions and pass the test. But that's how I am doing it. However, it's been so long since I passed my 13 WPM, I am certain that I couldn't copy code at 5 WPM either. It does take practice.

If you haven;t taken your code requirement, do it. You'll be glad you did. I have a friend who is now an Advanced who had DXCC on 10 meters as a Technician. With the sun spot cycle coming back around, it's going to get good again!

Sorry about the disappointment; that's why I always recommend anyone wanting to test, to always call the contact/phone number before going to a VE session.

There IS a regular session on the 1st Saturday at 9:00 AM at:

Clayton County Emergency Management Building
7496 N. McDonough Street
Jonesboro, GA

You could at some point want to write a program that will calculate
the time between two events. Unless the date is in a year,month,day
format, you have to reformat it before the calculation. This may
sound trivial, but I have actually been paid by companies to make
just this kind of change to their programs.

It is never a "waste" in my opinion to take a ham test.
It took me 6 tries to pass the 5 wpm test. I learned something on
every try. many good pointers were given by the various testors.
And you only need to guess the right 7 out of 10 answers to the
multiple choice questions in order to pass your exam. So go for it.
If nothing else it lessens the fear of taking the test. the more you
take it the more comfortable you get with it.

Note: write down every character you think you know and draw a line
whenever you miss one. You can go back later and "correct' your copy.
It is legal and the examiners suggest it. By doing so and looking at
the exam questions i was able to correctly "correct" one minute of
perfect code (enough to pass) and I got 7 out of 10 questions right
too.

550 questions are not overly difficult to memorize the answers to.
Perhaps "memorize" is the key word that is cause for debate -- I doubt
someone could memorize all 550 questions so they could recite them
word-for-word back to you. It is, however, very easy to become so
familiar with the material that you recognize the correct answer from
the list of 4 possible choices. In many of the exams (I don't recall if
any questions on the tech/novice are like this) there are "patterns"
to whole blocks of questions -- if you merely remember the pattern,
you'll be able to get the answer at exam time.

add more screws to the case....make sure you have copper "fingers" mounted
to the case that touch the cover where it is not held by a screw....add AL.
foil to any area that is not shielded and ground it to the chassis.....put
core filters on ALL cables leaving the back of the pc/monitor including the
power cords......the net result is a very quiet pc......note: gaps of .2
wavelength or greater can allow noise to get out of the pc for that
specific band/harmonics.........Jerry

Oh come on now, Cecil. That is a real stretch in the CW v
war. How about taking the game of golf. Probably a lot more
dips out there batting a ball around with a really obsolete
club. Why don't they just get some BIG shotguns out on the
the course and do some real ballistic golf. Why use obsolete
technology just trying to get to the 18 hole and a dry martini? Well
it's tradition mate, pure and simple. Take away the tradition of
CW and the house crumbles. Nothing else to debate.

73, Bob, KE6F and so on.

My problem is not parsing up the date/time but trying to find a 'standard'
ground zero. Unix use's 1/1/1970 stored as a long in seconds past, while
Bill & Company uses 12/30/1899 stored as a double with the whole number
being days and the fractional part being a part of day (ie .5 is 12 noon).

Any Input ?

I tried, but I have FINALLY gotten sucked into this stupid CW/anti CW debate! Damn!!

First off, if everyone on here spent their time ragchewing instead of bitching, er, I mean complaining maybe something could get accomplished, or at least opinions swayed a teeny bit.

Secondly, why can't people complain about some worthwhile arguement? Lemme see, in the utopic society CW gets abolished, then a little flood of people get their generals.... The years pass, but there is still this vocal core of whiners that never spent the effort to upgrade their writtens, after all, the advanced written IS a bear, all that theory and stuff.... Well what the hey!! You know, ALL THEORY IS RENDERED OBSOLETE DUE TO THE ADVENT OF SMT CONSTRUCTION!!! I shouldn't have to take this test! Its unfair!! If I can't work on my radio (because I don't have the tools or inclination) why should I be expected to know how and why it operates??!! So we would see this whole idiotic thread repeated, except on a slightly different subject, but probably by a lot of the same people. Wanting a true/false type test or some other way they perceive

they could pass the test with minimal effort, but of course not minimal enough so those under them could attain it without effort too.

I suppose I am trying to say that fair or not can always be debated, but these are the requirements in this country, and comparing them to the rest of the world seem to be median. Do not be so resistant to learning something new, sure its effort but when time passes the things we earned with more effort we usually value more. If you think time spent learning CW (or most other things for that matter) is wasted time, what are you doing instead? Watching television? Sure seems like some of us here are NOT spending it talking to other like-minded souls through the aether. All the anti coders in this NG, have you tried talking DX? 2M SSB? How about 6 meters, anyone fool around with that? Plenty of opportunities to learn new things, meet new people. Do that instead of complaining here, or else bite the bullet and at least 'try' to learn CW. Maybe you will find it at least a tiny bit intriguing. Or do this, find some 6 part mini series on TV, and instead of watching it devote that time block to learning CW, and I bet you will be suprised if gosh darn you don't have a firm grip on it by the end of the mini series.

I hope nobody is offended by my using the term "CW" to describe morse code since it actually means continuous wave, the media which transmits the morse code tones.

Since people are going to be looking up my callsign to see what I have or have not done, I'll tell you now I'm a coded technician, yep only 5 WPM. So why should I advocate something I don't have? Because this is supposed to be a hobby, which means something fun, enjoyable, and which you become a better person by practicing. 2 months ago I decided to finally quit talking about it and upgrade, so I passed my general written and now am working on getting my code up to speed. I am planning on taking the advanced written in 2 weeks. It is difficult, especially the code part because with a job, wife, and two year old son my commitments do not leave much time for me to do things I want or would like to do. But thats life, you can either complain or get on with it. I had been using a little homebrew 40 meter transceiver but bought a Yaesu HF rig, it makes it easier to make contacts or just to listen when I'm tired and don't want to QSO. I am hoping to pass my code elements end of June.

I do believe most everyone can do this if they put forth the effort, CERTAINLY much less effort than is wasted here on this subject.

2369. FT-5100 resetting itself??

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-06 00:00:00 UTC
From: mladair@umcc.umcc.umich.edu
Message-ID: <5koc2v$o8i$1@umcc.umcc.umich.edu>
Source record: 198956

Anybody out there have any idea why my FT-5100 would keep resetting itself??
every couple of weeks, it seems, the unit completely resets, almost like I
had pressed the [D/MR] [F/W] [REV] Keys while turining the unit on.
It shows 300.000 & 20.000 on the display and I have to totally re-enter all
memories, settings, etc.

Could it be the battery, or the way I have it wired??

Instead of wiring direct through the battery, I have the radio wired through
a high capacity relay that turns on when I turn on the vehicle. I didn't
want to run it direct to the battery because I feared leaving the unit on
and ending up with a dead battery.

It seems kind of odd to me that the radio would work fine for a coupel of
weeks, then reset itself. If it were the internal battery, shouldn't it
reset every time it was turned off??

Thanks for any help you might be able to give!!!

The ETO ALPHA 76A(pa) is quite likely the best amatuer HF amplifier ever made.(In my oppinion)

Reasons why;

(1) Simple, yet very effective design.
(2)Easy to maintain. (clean once a year, lube fan bearing once a year)
(3)Very effiecent, 70% typical, which means more of the power goes out the antenna, than out in the shack, as heat.
(4)Quiet, cool opeartion, even at full power, for long periods.
(5)The best ALC feedback system on the market, (you set it for max power, and forget it), the amp will never exceed that level you set, no matter what the drive is set at. (You must actually connect the ALC to the exciter for this to work)
(6)Desk top convinience, no bulking outborad power supplies to take up space, yet the amp delivers full legal limit power out.
(7)Easy to tune, set it up by number, never need to tune on the air again, after making up a "cheat chart".
(8)Little to no "parasitic" trouble, NEVER USE THIS AMP ON 12 METERS, without first modifing the Plate choke, or you will burn it up, (unmodified plate choke is resonante on 25 mhz). My 76 has never "spit" or "sputtered", on any band.
(9)Inrush current protection is standard, (long before most other manufacturers every put it in their amp).
(10)Grid & plate over current protection standard, (nearly "foolproof").
(11)Warm-up lock-out, you can't hurt the tubes while they warm-up, because you can't key the amp, till the warm-up period is comlpete.
(12)Many of these amps that are "old"(15+yrs), are still on the air, & still putting out full power, with the original tubes in them. My 76 has the original tubes in it and has been putting out full legal limit ++, since 1982.

These amps, give the owner the most "bang" for his buck, even an older ALPHA, can out perform most "NEW" amps.
This is my opinion, you may or may not share it.
No, I am not connectted to ETO in anyway, I just really like the ALPHA.

There are several books available with the question pool. The questions are
the actual questions that may appear on the test (answers in the same
order, etc.)

Good luck on the exam. If you prepare well you should have no problems
passing it. A good practice can be gotten over the Internet at
http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html. This page will generate a
practice exam for any of the classes of tests and grade you. That way you
can see how you are faring. I took the Tech test and passed even though I
haven't studied the material in years (I did mis many more than I did when
I got my license, however ;)

I have heard that the question pool will be changing soon so you might
check on that with a local ham group. Good luck again...

David, knock your self out. I spent a month of weekends on the 40M novice subband calling CQ about 10 years ago. I got exactly two responses. Neither stuck around the frequency long enough to make a log entry. QRS (could you please, please slow down?) is pretty much unknown also. And if you get sucked in by the wistful articles in QST about the benevolent Extra that cruises the novice subbands to lend a gently hand (or fist?) forget it. That is one of those urban myths that refuse to die. I suggest getting more code practice tapes, getting to 13 or 20wpm, and then forget all about how "swell" the code is and how the code folks are so nice (urban myth). Then use the microphone to actually talk to other people. Good luck, Brian/N0iMD

Why is everyone still arguing about CW? I thought this debate since
last year was well over, apparently not.
We all know that CW will eventually go so there's not much point
whinging about keeping it.

2375. VHF Propagation Questions

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-06 00:00:00 UTC
From: fgk@iquest.net
Message-ID: <336e6afc.6228626@news.iquest.net>
Source record: 199068

I have two questions about propagation on the VHF bands.

First, I found a chart on the web
(http://www.artscipub.com/simpleton/simp.range.html)
This chart estimates transmitter range based on power, antenna height, and frequency. I noticed that the higher the frequency (for a given power and antenna height), the shorter the range. I do not understand why this would be the case. Since VHF is line-of-sight, I would think that signal strength would be independent of frequency. Or would this be due to attenuation by water vapor, etc. in the atmosphere?

Second, I have noticed (again on VHF, 2m) that I get better connections on packet at night. Using an HT with a J-pole antenna, I can get a reliable connection to a certain station about 10 miles from my QTH after dark, but usually not during the day. I have listened to the frequency as I transmit, and it is not (for example) more people using the frequency during the day. The results hold even when I and the other station are the only ones on the frequency. I am confused by this. Again, I cannot see why there would be a difference between day and night for line-of-sight reception (maybe there is more background noise from the sun during the day?).

Any insights appreciated.

If you're looking for a Windows 95/WindowsNT program to control your Yaesu FT-990 radio, I've decided to offer my MasterControl 990 as shareware. The features are noted on my MasterControl 990 home page at http://prairie.lakes.com/~medcalf/

You'll need an RS-232 to TTL adapter to talk to the FT-990, and one available COM port on your computer (the program supports COM 1 through COM 9). The shareware registration is only $25.00 and I'll be happy to consider all suggestions for improvements from registered users.

Eimac type YC156. This is the same basic tube as a 4CX5000. It is a high mu triode with beam forming cathode and grid that provides the gain of a tetrode. Power gain is 15 db.It was designed for the medical industry and has a rating of 6500 volts at 4 amps (67 amps peak in pulse mode !) This tube will operate with full output to 110 Mc. No socket is necessary for this tube, it will mount in a 3 1/2 inch diameter clear hole, and the grid ring will bolt to the chassis. Height overall is 8". I have all data sheets. Tubes are used but emission is guaranteed for full output. $325 each.

Nice idea if your e-mail is limited to fellow amateurs, but I suspect
the real world would raise an eyebrow or two at a .ham domain. More
than likely, they would think the initiator of the message had gone
balmy. To the majority of cyberspace's inhabitants, after all, a ham
is something one cooks and digests.......I think I'll stick with .net;
it has a dual meaning, after all :-)

The SAD part is that hams not only DO NOT carry the ball in that part
of the reasons for the AMATEUR RADIO SERVICE (not hobby) to

even exist, that is to carry forward an ever-advancing state of the art, (Which does not mean supporting Japanese electronics firms).

SADDER STILL is the fact that if someone DOES try to start a discussion of radio qua radio, he/she is likely to be derided, and/or buried in trivia.

I've seen it several times.

2387. Atlanta VEC Sites

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-06 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <336f35ef.2249707@news.mindspring.com>
Source record: 199080

I need info on any VEC test sites in the Atlanta metro area (404, 770, 706, etc) (within 1 hour of Atlanta).

The following test sites have been cancelled (without notice):

1st Sunday in Lawrenceville, GA
1st Monday in Marietta, GA

Several people turned out to both the above sites this past Sunday and Monday to test. Some for their first license and some like me for upgrades. neither site posted any notice that the site was closed.

There needs to be a way we can let people know where to check for site info on the day of the testing.

Will assume you are talking about an AM Broadcast Staion. The GE Super
Radios are an oustanding AM Radio for around $40.00 or so. Try the
K-Marts and other Mart stores. Also Radio Shack has the same radio with
their "Realistic" label.

Mine receives AM from all across the country both with the built in loop
antenna and outdoor antenna.

Good Luck

: what I was saying that other people can help internet examinee out.
: then it is cheating. 1 year old girl CAN get a license...

No matter how many times you study, you will not be able to memorize the whole 550 questions. Just because you memorized a sample of them seen on the internet, does not mean that is the same sample you will get on testing day. IHMO knowing what the list of qeustions before hand is is not cheating. If you knew the 30 that you will be taking, now, that IS cheating, and should not be tolerated.

BTW: The 1 year old can not read, and hence will not pass the test without a DR's certification of inability to take the test (I don't remember seeing age as a valid handicap). And, she also could not memorize all the questions.

Anybody who actually does memorize ALL the questions, would obvoiusly have learned something from it. Now is that so bad either? If you know the stuff so well that you can memorize all the answers, you have still learned. Cheating or not. (I still feel it is an amazing feat to do this though.)

Well, Burt would just crosspost to both of the new groups (and add others completely unrelated to amateur radio), and the Code Warriors won't pay any attention either. So if you don't want to see this stuff, then get a better newsreader than Netscape. There are plenty of them out there. Forte's Agent is popular. It supports killfiles and other filters which almost measure up to what a good unix newsreader can offer.

The hams we have here in the Fairbanks area are the type that Hossie mentioned. We help in running several community activities as well as international ones like the Yukon Sled Dog Race. We volunteer our time and radios to make these events safe for the participants and to keep others informed of what's going on. If it weren't for Ham Radio, no one would have helped Anchorage, AK when the Easter Quake hit in '64. We are

respected here!

Again, they're taking advantage of the available technology AND helping to
advance our hobby. One of our repeater repair technicians is a lowly
No-Code Technician and he is one of the main ones responsible for keeping
over 30 repeaters up and running.

> >Today, I listen to the legion of no-code techs, and hear competent

Come to Fairbanks and have a listen. Very polite and very professional
operators, always willing to help each other out. If it weren't for the
poeple in the Arctic Amateur Radio Club, I would probably just carry a
radio for emergencies and auto-patch but, I enjoy conversing with fellow
members here.

> >I see, with the
> >expansion of the hobby, Radio Shack getting re-involved with equipment

>
I was in Atlanta a couple of weeks ago and when the salesperson behind the counter at HRO found that I was only a No-Code Tech, he didn't want anything to do with me. Maybe that's why they're closing their doors. Radio Shack is always willing and able to help us out up here in the frozen north.

> --
> -- Ted Kennedy has killed more people with his car than I have

> -- If you don't like my opinions, that's just too damn bad.
>
Now, to code or not to code... I choose not to code because I can't spend $1000 bucks for a radio and $300 for an antenna but, if one were to become available as cheaply as my two 2mtr radios did, maybe my wife and I will consider upgrading. But, for now, 2 mtr is just fine.
I think the main thing we need to concentrate on is getting more people upgraded no matter what it takes so that we can say "Hey FCC, don't take that band away from us, we've got xxxxxxx number of people that are using it." At least that's the way I see it.

I have a question on the behalf of a friend of mine.
How do you connect a serial communication interface (cable) to
an ICOM IC-P2E? I have two cables connected from the radio (mic and
speaker) to the modem. I have a Baycom micro-modem, that is connected
through a 9 pin serial con. I wonder which treads from the two cables
should be connected to which pins (in the 9 pin serial)?

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am realatively new to working any HF (I just passed my 5 WPM 2 weeks ago) and am trying to learn how to work 10 M SSB. I am pretty sure my SWR is ok (don't have a meter or tuner yet. I am waiting until next week and am going to pick one up at Dayton Hamvention). My question is that I need to adjust my mic gain so that I can lower the power out to about 200 Watts PEP. According to the rig's manual, you do this with the mic gain. I know this is really hard to do with out a power meter, but even if I can get it close (say 190 or heck even less), that would work for now. Also, does the Carrier Knob do anything on SSB?

When will people learn to separate their private interests from the legitimate uses of regulatory power?. Because the government does not set the rules for the *sport* of golf. Just as it doesn't set the rules for the sport of fly fishing or other arbitrary sports that do not impinge on public safety. Even government intervention in baseball pertains to union/managment labor relations and not to the rules of the game itself.

Hams acting for their own pleasure are engaged in sport and are free to define the rules for arbitrary pursuits such as DXCC. The FCC does not, nor should it, care what conditions or limitations are applied to make the sport activity "fun" in the eyes of the participant. No FCC regulations pertain specifically to the sport aspect of ham radio, except as some regulations make certain sports infeasible - just as murder laws make hunting people wrong. But otherwise, hams who don't care to pursue DXCC are not required to do so.

When hams are acting to fulfill the requirements of the Amateur Radio *Service*, as defined by government regulation, using regulatory power to enforce the concept of "tradition" or the "sport" rules of a limited segment of the regulated population is not legitimate.

Hello Everyone,

I have for sale an Icom T7-A dualband handheld. It is five months old and is excellent condition. Comes with 3 watt battery, duck, charger, manual, and box. This unit will RX: 50-199, 300-399, 400-599, 600-999 mhz. Also, the TX has been expanded. I will even throw in the softcase. ($30 value)

This is a good radio, but I am selling it because I want a dualbander w/ 2 vfo's. E-mail me w/ an offer if you are interested and we can talk.

Thanks,
Adam / kc7ljq@hotmail.com

Mastering Morse code is a very difficult task. It takes many long hours of practice to gain the necessary degree of proficiency to pass the 20 wpm test in all it takes approximately 80 hours of practice over about 8 months.

It takes another 5 years of practice to begin to approach the proficiency required to communicate with all but the very best operators on the air.

Some day I hope to master the code, but I fear it is another 5 years away.

I don't know the answer to your question but a 9-pin to 25-pin RS-232
conversion chart might help you:

25 9
PIN PIN
--- --- ---
TXD 2 3 Transmit Data
RXD 3 2 Receive Data
RTS 4 7 Request To Send
CTS 5 8 Clear To Send
DSR 6 6 Data Set (modem) Ready
GND 7 5 Signal Ground
CD 8 1 Carrier Detect
DTR 20 4 Data Terminal (pc) Ready
RI 22 9 Ring Indicate

This has been discussed for the TM733 as well, but nobody has done
it... It seems like all restrictions as to out-of-band operation,
xband repeater, 1750Hz tone etc. Is only present in the "control head"

Hi Christopher, not that I'm talented, but if you take the privileges
in kHz and divide by the wpm requirement, you will see that the advanced
class license gives the most privileges for the least amount of effort.
I could pass the extra written exam and probably pass a 20 wpm multiple
guess Morse code exam but why bother?

I memorized all basic questions and answers on Canadian Amateur Radio
Question Bank... I didn't even read the questions when I wrote the
test. I got 100% on the portion of question bank's questions. (In
Canada, you will get some questions that are not on the question
banks) I guess I memorized around 500 question + answer sets.

I have been working mobile of and on for almost 20 years and have generally been able to eliminate most noise. I have a 1990 Ford ranger pickup now and although the noise blanker on the TS-440-S is effective on ignition noise, there is still a lot of engine noise left. I am told that the fuel pump may be the culprit.

Any one else have trouble with Ford product engine noise? Any good solutions?

Please e-mail to either of the following:

Hi Cecil
Well sorry to report that the house is sound and not ready to
fall down on my head. I just thing that if we pull too much
tradition out of the hobby/service, then the mystique will also
evaporate with it,,, nothing more. To apply a little hard logic
I would say that all testing regarding ham radio licensing is
a rite of passage--not just the code segment.
What most of the critics of code requirements seem to miss
or dismiss is the highly romantic nature of the hobby. Even the
technical side is steeped in romanticism and all you have to do
is read someones source code comments to see it creeping into the
thought process.
Perhaps ham radio has seen its time come and now it is time
to hang it up.. I am quite serious on this point. The tecnhical
requirements beyond regulatory items, are nearly all a priori
exercises and mean little after the test is completed--much like
your commentary on the alleged obsolete code requrirement.
You can cite anecdotal events where this person or that
person did some slick engineering in the amateur radio venue, and I
guess we all can and often do so. But in the main most hams just want
to get the ticket and get on the air and chat about radios and
computers and what ever else seems to come to mind. If their
silicon toy from Japan goes on the fritz, its off to the factory. All
the Smith Charts and Software in the world are not going to fix the
thing. So why bother to learn reactance formulas and return loss
calculations, and front end noise temperature calculations and
so on...Never gunna use it. The ham who cant copy his own call sign
probably can't calculate the inductive reactance of a capactor
let alone the noise temperature of an LNA using Y factors and dual
temperature terminations. But it does not matter. Those that can do and

enjoy doing it..a rite of technical passage to go with the rite of code passage..a nice little package for all who want to play in the ham radio sand box..
I really don't see what the problem is once you rationalize the whole mess. Just dues, Cecil. Code is just the dues you must pay for admission just like useless technical dues...

Keep up the fight for what you belive, but please don't mix the metaphors so much...you will be happier.

Adios es 73

Bob,KE6F

The others who showed up did get the list from HRO recently. The
problem is that the VEs didn't tell HRO or the other major area ham
clubs to remove the site listing from their newsletters.

I went to the Clayton site. Nice setup, with one exception. It was my first time and there were no signs indicating where the room was or how to get into the large building. I just missed my Advanced test by 3 questions. the reason why i wanted to try again right away the next two days before i forgot anything.

I spoke with Kenwood's Technical Representative today and he related that within a week or so - perhaps in time for the Dayton Hamfest, Kenwood will have a Windows 95 program that will allow file uploads and downloads from the TM-V7A. It will enable alpha numerics for and load the memories with frequency and PL tones. No other remote programmability is planned. The program is supposed to sell for $39.95 and use the data port & PG5A connector.

This will certainly take the pain out of loading memories - especially after a CPU reset!

Sorry about the disappointment; that's why I always recommend anyone
wanting to test, to always call the contact/phone number before going
to a VE session.

There IS a regular session on the 1st Saturday at 9:00 AM at:

Clayton County Emergency Management Building
7496 N. McDonough Street
Jonesboro, GA

contact George White, KN4NG at 361-6850.

My daughter also took a test at the Stone Mountain VE session
recently.

Check for a list at HRO also.

Mike:

Congratulations to your successful upgrade! I just like to throw in my
1 cent worth of opinion to code drilling. Although some people will
take =

the code issue very personally, I don=92t mean to convince anyone to =

agree with me anyway. After all, this is a newsgroup on the internet.

Back to the subject. I didn=92t use any tape at all when learning code;
instead,
I used the "Super Menu Driven Memory Keyer" from MFJ. I figured that it
would be more cost effective to get a piece of hardware as part of my
station
build up. Computer software and tapes can only serve one single purpose =

and are not all that flexible. Moreover, I can connect the Memory Keyer
to =

my computer and I have an instant computer program for me to verify text =

copied. I can customize my passage and words to drill on, especially =

those punctuation marks. On the investment side, the keyer (or
equipment =

alike) has better resale value than tape or software. =

Anyway, I used the thing to get myself from General, Advance, to Extra
in =

3 months. Although it was a little clumsy, I brought it along
everywhere I =

went. Forget about "Morning Edition", "All Things Considered", and my =

favorite audio tapes. I boosted my code speed from 0 to 25 WPM in =

conjunction with listening on HF and WA1W, in a matter of 3 months! It =

took me one shot on the first 20 WPM test and the rest was just plan =

studying.

I use the MFJ box as a station identifier on VHF (yes you can program
the
box to transmit your callsign every 10 minutes), at times, I use it as a =

beacon generator on HF as well. When I am lazy, I use my computer
to transmit CW via the box. =

Anyway, good luck to your venture in your advanced tickets. =

Best 73!

Will assume you are talking about an AM Broadcast Staion. The GE Super
Radios are an oustanding AM Radio for around $40.00 or so. Try the
K-Marts and other Mart stores. Also Radio Shack has the same radio with
their "Realistic" label.

Mine receives AM from all across the country both with the built in loop
antenna and outdoor antenna.

Good Luck

No matter how many times you study, you will not be able to memorize
the whole 550 questions. Just because you memorized a sample of
them seen on the internet, does not mean that is the same sample you
will get on testing day. IHMO knowing what the list of qeustions

before hand is is not cheating. If you knew the 30 that you will be taking, now, that IS cheating, and should not be tolerated.

BTW: The 1 year old can not read, and hence will not pass the test without a DR's certification of inability to take the test (I don't remember seeing age as a valid handicap). And, she also could not memorize all the questions.

Anybody who actually does memorize ALL the questions, would obvoiusly have learned something from it. Now is that so bad either? If you know the stuff so well that you can memorize all the answers, you have still learned. Cheating or not. (I still feel it is an amazing feat to do this though.)

Subject: Orchard Lounge across from Hara

Across the street from Hara Arena if you look closely just up the street, you will see the Orchard Lounge, aka Orchard Cultural Center. Each night at 9 p.m. Wednesday, Thursday, Friday and Saturday night during the Dayton Hamvention Dan Morgan and I will be uplinking a wild and crazy live radio show to SBS 6, transponder 13 upper, Ku band @ 6.2 wide band audio as well as to GE-1 transponder 7, C band at 7.56 wide band audio, on Thursday night. Dan and I will be taking and airing telephone calls from hams across the United States. I've heard tell that the Cultural Center will be selling breakfast and lunch as well as good food and beverage for dinner.

If you want to crash at a happenin' place during the Hamvention then walk across the street to the Orchard Cultural Center, especially at 9 p.m. each night. You can join us and we'll likely give you a chance to ham it up on a commercial broadcast satellite.

I don;t want to get invloved in this thread, but I needed to add to what Graham has said about learning the code. I know a couple of EXTRA class hams, who passed the code and the tests, but don;t know a damn thing about Amateur Radio and couldn;t copy code at 5 WPM, let alone 20. Myself, on the other hand, am a General. I am working on my Advanced, but I refuse to just MEMORIZE the questions and pass the test. But that's how I am doing it. However, it's been so long since I passed my 13 WPM, I am certain that I couldn't copy code at 5 WPM either. It does take practice.

If you haven;t taken your code requirement, do it. You'll be glad you did. I have a friend who is now an Advanced who had DXCC on 10 meters as a Technician. With the sun spot cycle coming back around, it's going to get good again!

DOCUMENT TITLE: A Common Date-Time Standard for Amateur Radio - A Proposal.
AUTHOR: Ian Galpin, G1SMD.
LAST REVISED: 1996-Jul-28.
FORMATTING: 78 Characters per line + <cr> + <lf>.
FILE NAME: Y2KHAM.TXT
==========

A Common Date-Time Standard for Amateur Radio:

Proposal: * ~ #
--------- See Notes !
1. That the provisions of the:
- 'full basic' * and
- 'full extended' * formats
within the International Standard ISO 8601 ~, for representation of:
- Calendar Date in the Gregorian Calendar #, and for
- Date expressed as Ordinal Day of Year #, and for
- Time of Day expressed in 24-hour format
be adopted as defacto standards for all facets of the Amateur Radio hobby.
2. That an unofficial variant to the ISO standard, that allows the month to be written as the common 3-letter English abbreviation be included within this proposal, when a Calendar Date is intended for human reading.
3. That the UTC time scale be used whenever possible in Date and Time representations.

Scope:

The usage of these formats can apply to each of the following:
- The internal workings of Computer Programs.
- Computer Printouts (Satellite Tracking, Log Books, Packet Radio, Contest Scoring, etc).
- Computer Screens.
- Data Storage.
- Data Interchange (on Packet Radio: both within the headers, and within typed messages; Log Book Files, Contest Log Files, Satellite Pass Data, etc).
- QSL cards.
- Membership Cards, Certificates, Invoices, Receipts, Magazine Issue Dates.
- Any other computer, or paper, based documentation, data, or correspondence.

Benefits:

- The ISO format completely avoids the American / British date format ambiguity.
- Data and programs become internationally portable, with no possibility of misinterpretation.
- The usage of the ISO format for the internal workings of computer programs usually ensures more compact code, and therefore faster operation.
- The logical left to right Year-Month-Day Hour:Minute:Second precedence makes computer programming easier. Certain date-related algorithms become trivial when using this style.

- Using the ISO format and 4-digit years should ensure that software transitions correctly from 1999-12-31 to 2000-01-01 (programs using only a 2-digit year may produce wrong results).
- Having only one date format allowed on computer program screens and printouts means that the program works the same for everyone everywhere in the world; only one program version is required for all markets.
- It removes the need for a whole load of 'Date Format' menu options, making programs smaller, and easier to write. It reduces the scope for making mistakes.
- Using a fixed format for dates and times makes looking down lists of dates and times easier.

Background:

Dates have caused many problems to computer programmers. The tradition in the past has been to use the dd/mm/yy form in Britain, and the mm/dd/yy form in America. The problem is that programs from abroad may 'work backwards' to how the user expected them to. In addition, messages written abroad from the eventual reader, may be misunderstood: e.g. 1/12/96 is read in Britain as 1st December, but if written by an American it is likely that January 12th was intended. The ISO Year-Month-Day format solves this problem.

Where only a 2-digit year is used within a computer program, there may be problems when year '99' (1999) rolls over to '00' (2000); in addition to the problem that a date like 31/06/96 may be 1896, 1996, or 2096!

The full ISO format (with 4-digit years) removes all of these problems at the same time.

The Standard was originally adopted in Britain as BS 4760:1971, and as BS 5249:1976 and later superseded by BS 7151:1989. Latterly, and as a result of European harmonisation, BS 7151 has been renumbered as BS EN 28601, so implementing the European Standard EN 28601, which is identically worded to the ISO 8601 Standard. International Standard ISO 8601 replaced the ISO 2014, ISO 2015, ISO 2711, ISO 3307 and ISO 4031 Standards which have all been withdrawn; but which you may see referred to in some older documentation.

The ISO 8601 Standard has now been adopted in most countries of the world.

Summary of the ISO Standard:

Gregorian Calendar Date:

- Use 4-digit years when storing or printing dates.
- Use the order Year-Month-Day i.e. biggest first (e.g. 1999-12-31).
- Use Leading Zeroes on digits 00 - 09 for the Month and for the Day number.
- Use the '-' separator. Do not use the '/' separator, this has a different meaning within the standard.

Ordinal Day of Year ('Ordinal Date'):

- Use 4-digit years when storing or printing dates.

- Use the order Year-DayNumber.
- DayNumber is a 3-digit Number from 001 to 365 (366 in a leap-year).
- Use the '-' separator between the year and the Day Number (e.g. 1996-250).

Time of Day:

- Use the 24-hour format.
- Use the order Hours:Minutes:Seconds i.e. biggest first.
- Use Leading Zeroes on the digits 00 - 09 for each data field.
- Use the ':' separator (e.g. 23:59:59).

Time Zones:

- Specify Dates and Times in UTC whenever possible, following the Date and/or Time by the letter 'Z'.
- For Zones other than UTC the Local Date and/or Local Time is followed by a Zone Designator, where East of Greenwich is Positive, and West of Greenwich is Negative. It is a 4-digit number expressing hours and minutes difference to UTC; where '+0100' means one hour ahead of UTC (e.g. Central Europe), '-0500' means five hours behind UTC (e.g. East Coast USA), and '+0430' means four and a half hours ahead of UTC (e.g. India).

Various Comments:

When combining Dates and Times, always put the Date BEFORE the Time.

The formats described above are the 'Full' format. The ISO standard also specifies formats for various 'Truncated' and 'Reduced Precision' forms. For the Full Format Calendar Date of '1996-05-25', the Truncated version of '96-05-25' says year 96 in any century, and the Reduced Precision '1996-05' form, just specifies the Date down to month level. The Full Format is the most relevant here; the other forms may cause problems of misinterpretation in some instances (especially problems when a 2-digit year is used).

For each definition within the Standard, there is a 'Basic Format' and an 'Extended Format' style. The Extended format (1996-05-25) includes the separators, and is intended for human reading. The Basic format does not include the separators (19960525), and is intended for data storage (e.g. on Hard Disk), or for Data-Interchange, and can be an ASCII string, packed BCD, a binary number, or whatever you choose.

The Standard defines that a Date and/or Time expressed in the UT or UTC time scale should be followed by the letter 'Z'. For Amateur Radio operators it may be prudent to also allow the letters 'UT' or 'UTC' be used.

For a Date and/or a Time expressed in a Local Time Zone, the standard defines a sign and 4-digit numerical format for expressing that Time Zone relative to UTC. For Amateur Radio purposes, I propose that the established 3-letter abbreviation for Zone, where already defined and in common usage, also be allowed (e.g. EST, PST, PDT, CET, CST, etc).

The ISO Standard allows Dates and Times to be expressed in only fully numeric form. For human reading of dates and times; and to help those people who may

not have come across the ISO Year-Month-Day way of specifying Dates and Times before; and for the purposes of this proposal, it would be wise to also allow, within the definition for Calendar Date and Time, the usage of the common English three letter abbreviation of the Month to be used, such that the date 1996-05-25 can also be written as 1996-May-25.

Notes to this Proposal:
----
* that is, as opposed to the truncated and reduced precision formats.

~ ISO 8601 is adopted throughout Europe as EN 28601.
EN 28601 is adopted in Britain as BS EN 28601.
ISO 8601 is adopted in America as an ANSI standard.
ISO 8601 is the Default National Standard in Denmark, Sweden, most East European countries, China, Korea, Japan, and many others.
The Title of the ISO Standard is 'Data Elements and Interchange Formats - Information Interchange - Representation of Dates and Times'.

ISO 8601 also has other provisions for Date expressed as Week and Day of Week, and for specifying Periods of Time. These are not especially relevant to Amateur Radio, and are not covered by this proposal.

Ian Galpin, G1SMD 1996-Jul-28.

I had email to/from the company that is actually doing the work on this project. I put a bug in their ear that since they had the interface to communicate with the V7, gee, wouldn't it be a great way to make a cheap remote base? A single card computer talking to the V7 and all you would have to do is plug in a control receiver... simple and cute.

Major hint. The control head is just that, a control head. Four wires (ground, power, data in and data out) are all that will be used. Someone want to figure out how to interface it? Or make new software other than the cloning software?

NORTHERN NEW YORK - PLATTSBURGH

Champlain Valley Amateur Radio Club
Presents its 2nd annual ARRL Sanctioned

International Hamfest and Computerfest

Saturday June 7, 1997
Clinton County Fairgrounds

Buyers at 8AM !! RAIN or SHINE !!
Paved walkways, Lots of lockable indoor space with power, Large tailgate area.
Most Facilities Handicapped Accessible

Directions: I-87 to Exit 37, left on Rt 3 for 1 mile,
bear left onto route 22B, 1/4 mile on left.

ACCOMMODATIONS: The DAYS INN of Plattsburgh at exit 37 of I-87, has arranged
special rates for hams. Tell them your here for the Hamfest.
DAYS INN phone 1-800-325-2525

TALK-IN on CVARC club repeater, W2UXC 147.150 + mhz. Talk-in contact prize.

On Site Camping: Friday evening $15 incl 3-way hookup. $5 w/o hookup.

Food: Fri nite: All U Can Eat Spaghetti, Sat. Breakfast buffet, lunch specials.

Prizes: Drawings every 1/2 hour, Talk-in prize at 1PM, must be present to win.
2 band mobile, 2 band HT, 2m HT at 2PM - Need not be present to win.
20 mtr RCVR kit, Kids-R-Us giveaway, must be under 18 yrs old to win.

DISPLAYS: APRS INTERNET KIDS-R-US AMSAT

FORUMS: RACES CONTESTING ARRL SKYWARN

Exams: ARRL/VE Session, registration & testing begin at Noon. Walk-ins welcome.
Contact - Les Schmarder, WA2AEA (518) 873-2189

Donation: Includes stub for prize drawings - Advance (received by May 31) $4.00
$5.00 at the gate.

No charge for indoor or outdoor flea market space - first come/first serve.
Tables available for a $10 refundable deposit.

The above is all good advice. The exact type of noise will give you a clue where it's coming from though. Is it a "pulse" type noise? If so, does it vary in pitch with the engine speed or the road speed?

If it varies with engine speed it could be either spark plug noise or, if your car has EFI, fuel injector noise.

If it varies with road speed, it could be from the speedo sensor (if your car has an electronic speedo) or even from the tyres! I know of one case where the only cure for the interference suffered was to fit a new set of tyres of a different brand (unless your tyres are due for replacement though, treat this as a last resort).

In-car computers (trip computers, engine management computers etc) can also be sources of noise although they'll tend to throw up birdies on specific frequencies rather than broadband noise across the spectrum.

I am looking for a company called Omnitek Inc, they were in Trevose
Pennsylvania and made amplifies, mixers, oscillators etc.
I have some equipment made by them and want to modify it and need some
information and data about it.
Any help gratefully accepted, sorry if this not exactly amateur radio but I
am hoping someone know of the company..

thanks

Mike Barrett

requirement.

Cecil:

I'm curious...why do you think that having "many, many more extras" (sic)
is a good thing? Personally, as an Amateur Extra-class licensee, I don't
think that there is any discredit due to an amateur who does not achieve
this particular license class. It's not for everyone; and the
requirements
are geared so that it won't be. These requirements are, of course,
easily achieveable, so it is truly up to the individual whether or not
he/she
will ever gain Amateur Extra-class operating privileges.

>I've been away from this group for a few months. Coming down from a

>To all who don't fall into that catagory, I'm not talking about you.

Cecil, try to comprehend one important piece of information...this is the
AMATEUR radio service. We do things differently than professional
radio services, for a good reason. We retain the Morse code requirements
to ensure that AMATEUR radio operators have this capability in perpetuity.

It is deemed an important skill, the very basic form of electronic
communication.

As long as someone knows how to create a transmitter, and knows how
to use Morse code, communications over long distances can take place.
Its beauty, its value, and its who reason for being is related to its
SIMPLICITY.

There is simply no more logical requirement in the ARS than the code requirements, mainly because they are clearly defined, have a specific purpose, and have numerous side benefits, e.g. creating disciplined, achievement-oriented operators.

: what I was saying that other people can help internet examinee out.
: then it is cheating. 1 year old girl CAN get a license...

After thinking about your comment, I think I may understand why you said this. Are you thinking that the actuall test is being given on the internet? By this it is meant that after you take it, you get a ticket? If this is what you read into it, then ... Yes that would be a problem. The 1 year old would not actually be taking the test. Somebody could be keying it for her.

That is not the case. These are sample tests to get an idea if you are ready or not. Nobody that I know of gets a license out of it. The rules are that a VE must administer the test. I don't think very many would read that as not being able to see in person the person taking the test. If they couldn't see them, I agree taht cheating would be a real problem.

ATTENTION HAM RADIO OPERATORS: During my spring cleaning this past week I found
50 copies of the 1996 edition of the N2RWE Amateur Radio Modification Database which
is a software program that I created in 1994 and have updated yearly as a one-stop
source for Ham Radio and Scanner Modifications! The package contains over
1150 Mods and Service bulletins.

Asking Price: $10 SHIPPED!!

Info:

1996 Hamfest Leftovers!!! Hurry!!! Only 50 Copies Left!!!
Dealer/Volume Discounts Welcome!
Features:
- Over 1150 Entries!
- OVER 1000 MODS for Ham Radio and Scanner Equipment!!!!
- Over 100 Service Bulletins!
- Fast Retreival with the Easy-To-Use Database Software!!
- Database Software Allows On-Screen Viewing, Printing, and Exporting
- Version 5.01 - 1996 Edition
- Printed Documentation
- 1996 Hamfest Price $15
Mods Available for Over 20 Manufacturers Such As:
- Icom
- Yaesu
- Standard
- Alinco
- Realistic
- Bearcat
- Regency
- Kantronics
- AEA
- Azden
- Many, Many More!
Requires:
- DOS 3.3 or Higher
- 640k RAM
- 4 Megabytes Free Hard Disk Space
- 3.5" Disk Drive

I'd you'd like to get one, or for more information please
visit my web site at http://mypage.ihost.com/unitedsound
or e-mail me at srwhite@ibm.net

If you're a dealer and would like to sell these copies at a
hamfest, the price for 10 is $50 ($5 ea), for 20 the
cost is $80 ($4 ea) and shipping is free!

Thanks,
Steve White

>Mike, you DON'T get it. We are not whining, we are making
>the effort to eliminate code testing. The question is WHY
>should anyone now be orced to learn morse code? That is
>the issue. Morse code only has value an an entertainment
>mode for personal use...and as such has no reason to be
>a requirment.

Bill:

You're the one who doesn't get it, and as far as I can tell, you never did.

First, nobody is being "forced" to learn the Morse code. They either learn it, or they live without the operating privileges it confers. No "force" is being applied at all.

Second: Morse code has much more than "entertainment value" for personal use. It has unmistakably advantageous attributes as the simplest, most basic, lowest power, highest S/N form of electronic communication available. Morse DOES do all the things you "anti-coders" claim it doesn't, and that is an undeniable FACT.

Third: We're talking about the AMATEUR Radio Service. We're not competing with commercial communications systems at any level for any purpose. They are being used as a basis of comparison, but that comparison is intentionally self-serving and misleading. Ham radio is about learning and service, and is centered on gaining and exploiting the most basic, fundamental concepts in electronic communication, for one very important reason: to ensure that these skills are not lost in the mad rush toward higher "throughput."

"Throughput" is fine, and to the extent that I'm also an advocate of the amateur digital modes, I'm all for it. But Morse code, and its testing requirements, exist for their own good, practical reasons. The fact that this debate is ancient shows us that there is good reason for retaining the Morse requirement, and at present speed levels.

Obviously, the regulatory bodies have agreed, through the entire history of the Amateur Radio Service, that Morse code proficiency is a valuable part of ham radio.

>There's no safety reason for morse, no technical reasons
>at all. Morse is not used in any manner that suggests any
>need for all HF licnesees o know morse.

This is only your misleading, self-serving opinion, Bill, and nothing else.
It is not the truth. It is not the last word. It is not even very clearly
thought-out.

Probably it's an over-reaction to the condescention, even hostility, evident to those who post to these newsgroups and are mere no-code amateurs or indeed are not even licensed. Such over-reaction is utterly inappropriate, I am sure....

No, that is not true. We retain Morse code because our respective governments, as well as most other governments, have not undertaken to modify their certification regimes in spite of the ITU Radio Regulations. Regardless, Roll's viewpoint only emphasizes the point that the welfare state

mentality that is evidentiary, because Roll believes that without a government sponsored program, ensuring such skills testing, that Morse code would die off from lack of interest.

> It is deemed an important skill, the very basic form of electronic
> communication.
>

No it is not an important skill, otherwise the government would be taking steps to ensure that each and every one of use that use the HF and MF amateur allocations is capable of using Morse code at a certain standard.

> As long as someone knows how to create a transmitter, and knows how
> to use Morse code, communications over long distances can take place.

All subjective judgements, of course; but, the fact that once a Morse code examination is passed, there is no compulsion for the individual ever to have used that form of communications.

Hi
I made a similar comment on the local repeater here in phoenix.
the topic was no-code vs. know-code.
except adding to the "number" what have they done to promote
ham radio. even the novice 20 years ago did his part.
built kits , learned electronics,and code.
now the newbies want it all for free.

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket
than junk mail, which has an almost 100% probability of getting
delivered. Routing to the bit bucket is automatically performed
by mail-transfer agents, news systems, and the lower layers of
the network.

3. The ideal location for all unwanted mail responses: "Flames
about this article to the bit bucket." Such a request is
guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bit bucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

If you have any questions or problems, please contact:

Brian,

I am sorry to hear your bad experience and deeply regret that
you feel left out by the "Extra Class" fists.

I guess you've missed my point here. I am not pushing people
to believe that CW and Extra Class are everything, rather, I am
merely trying to mention an option of getting the code tests
done. I made it in one way, but others might have made it in a
different way.

It's true that I love code; moreover, I also love that little extra elbow-room that advanced tickets can enjoy. Maybe it is me who like to go after a personal goal (Extra ticket in this case) or finding something that I think has batter resale value. It really doesn't matter! All we (HAM) care is to make QSO's and enjoy our hobby!

I shall leave the discussion on the existence of code test for other people to argue. I got my Extra ticket by passing the test because it is TODAY'S requirement. TOMORROW's requirement has itself to worry about. But for now, I play it by the rule. It's something I've earned and been enjoyed doing.

I know there are no-code fans out there, don't bother to flame me.

Best 73!

De AF4BH aka VS6UE/W4

Hi Dale, you must be a newcomer. There is no "anti-code crowd" and there is no push to "drop the code". You must have mistaken such for the anti-code-test crowd and the push to drop the code-testing. It's an easy mistake to make.

This assumes that we are talking about real antennas with significant
gain over a dipole, like properly fed parabolic dishes. This doesn't
hold for small lossless antennas where the gain can never drop below 1. :-)

Yes, you do get more background noise during the day--usually from
radio transmitters and businesses. Do you see the same effect on
holidays and weekends? FM detectors aren't terribly useful for
seeing this increase in noise level--an AM detector would be much
better. Also, signals off frequency can degrade your reception
significantly, particularly if your HT has a little in the way of
RF filtering. Some people have bought filters to improve reception.

Standard HX-240U, UHF 16 chnl/4 watt HT, 420-470 MHz, programmable,
all original accessories and boxes, software and field programming
instructions, digital display, simplex/duplex, hi/low power, scan,
CTCSS tones, drop-in-charger, spkr/mic, power cords, bottom covers,
extra alk battery pack, lighted LED, mobile mag mount ant, and manuals.
Excellent condition, $300.

Realistic DX-380 Portable Communications Receiver.
150 kHz-30 MHz AM and 88-108 MHz FM. Digital display.
Has local/dx and narrow/wide AM reception switches.
Stereo/mono FM switch. Also, hi/low tone and fast/slow
tune switches. AM external antenna, dc power, and headphone
jacks. Tunes by direct entry, up/down button, or rotary dial.
Original box and manual, like new, works great. $100

I will pay shipping via UPS ground.

Contact Doug, KG8EP at dknife@worldnet.att.net

Aloha,

FB = Fine business, literally; actually is used in place of the slang:
OK.

Wait until you hear an old sea salt CW operator working the ham
bands, and he sends "ZUT" and at the end of his transmission,
"UP". The exact meanings of these two are sort of shrouded in
the mists of CW's past at sea. There are various meanings, but
the present meaning might be, I really AM an old timer at CW!

In addition, the pro-code-testing camp is usually the ones moaning about
going to hell in a handbasket. There are several that post regularly to
this newsgroup that hold those licensed after 14-Feb-1991 as not worthy
of being amateurs radio operators. Those opposed to the code tests have
generally been concerned that amateur radio is just going to go away.

FORDHADR@jmu.edu (D.R. Fordham) writes:
>Do this things make a hum when they are operating?
>For example, if you are using one inside a tent, will
>it disturb a person sleeping in the tent by humming
>(60hz AC hum)?

The answer is "it depends". Some inverters switch the low voltage
at 60 Hz, then step it up using a transformer. These will hum (actually
more like buzz, since the waveform is usually a square wave).

Other inverters switch the low voltage at high frequency (50 kHz for
example), rectify it to DC, then generate AC using 4 transistors in
an H-bridge configuration. These are pretty silent - the magnetics
are running at ultrasonic frequencies, and the stuff running at 60 Hz
doesn't make noise.

The easiest way to tell the difference between the two is weight.
If your 300 VA inverter weighs about as much as a 300 VA linear power
supply, it's a low-frequency unit. If it weighs about as much as a
300 VA switching power supply, it's a high-frequency unit.

Oh, also: large inverters have fans, and they make noise too.

Dave

The Audio Engineering Society will hold its 14th International Conference entitled "internetaudio.aes.org" in Seattle, June 13 - 15, 1997. This conference will examine the technology shift toward computer-based, networked environments and its impact on the audio and
multimedia industries. This technical conference will feature presentations and demonstrations,
discussion and interaction to chart the future of the internet audio industry.

The 14th International Conference is chaired by three internet audio authorities: David Johnson
(New Media Designs, Inc.), Aurika Hays (Progressive Networks) and Ken Pohlmann (University of
Miami). The full three-day program will include ten technical Symposia and nine Discovery sessions, featuring more than 50 invited presenters, each an industry expert. Scheduled topics
include: open platform audio standards, audio policy and delivery, music and radio distribution
over packet networks, server push technology, point-to-point audio, workstations and editing
systems, online content development, perceptual coding for computer environments, binaural and
multichannel listening environments, virtual 3D audio, simultaneous multi-location recording,
internet copyright and the economics of internet commerce.

Nonmembers: $475
Full AES members: $395
Student AES members: $295

The conference venue is the Bell Harbor International Conference Center, 101 Stewart Street,
Seattle, WA 98101. This newly-opened waterfront facility offers a prime location near downtown
Seattle.

Please consult "http://internetaudio.aes.org" for complete conference information, and to complete
your online registration.

A neat post, I thought. Enjoy,
Jim, KH7M

THE REWARDS OF UPGRADING!!!

When I was a "newbie" to ham radio (a looong time ago), I got my novice license and tried real hard to work on my code and electronics knowledge so I could upgrade to the magical general license and beyond. There were many times when I just wanted to give up---seemed like no matter what I did, I just couldn't make enough progress.... But something always came along to help keep my interest and motivation up. I heard stories from other hams about all the interesting and exotic places they talked to, the interesting people they met and got to know, the excitement they experienced when they got through a pileup or had a particularly interesting QSO and of course my drooling over the new QSL's brought to club meetings.

It seems to be harder now to have those conversations, we're all so busy with the details of our lives. So it occurred to me that maybe I should share some of my excitement of operating, in the hopes that my enjoyment and pleasure might help motivate someone else to stay focused, to put out that little extra effort, to upgrade their license, join us on the HF bands, and share in that still wonderful "magic of wireless".

So here's a synopsis of a recent 9 days of my operating and some of the results and memorable experiences I had. I hope that they will excite and motivate you to stay on the upgrade trail and join us.

My normal operating times are an hour or so in the early morning, usually between 0530 and 0730, what time and for how long depends on how late I was up the night before and how early I have to be in the office. The band of choice in the morning is 40, roaming around between 7000 and 7050. Two or three evenings a week, I can often steal a little time after chores. If I'm real lucky sometimes I can sneak in a little operating right after I get home from work between 1800 and 1900. When that happens, I try to haunt 20 between 14000 and 14050. Later in the evening, I'll go wherever I think there might be interesting stuff going on--- 40, 20, 30, even occasionally 15 or 10.

And then there are weekends---sometimes I'll be able to get in some real concentrated time in a contest like the recent European dx contests or state QSO parties, or I'll just spend a few hours prowling the bands. The big advantage of course, is that I can get on in the middle of the day, when propagation is good to places like Africa that are hard to reach from Southern California. All together, I average a total of perhaps 15 hours a week on the air.

So here's what happened starting April 29th and ending after the morning session on May 6th. Altogether I had 52 QSO's, all CW. 34 of them were on 20, 1 on 30, and 17 on 40. There were 48 different stations and the number of stations by continent was Asia=14, Oceania=12, Europe=10, North America=6, South America=4 and Africa=2. The duplicates for the week were 3D2RW (on 20 and 40), T30WP (on 20, 30, and 40), and JA4CYG/MM (twice on 40). The shortest QSO was probably about 15 seconds long (after an hour of pileup bashing) and two longest ran almost an hour each. Incidentally, while the three mentioned were multiple QSO's with the same station during the week, 10 of the other 45 were stations I had worked before (the record was QSO number 12 with my good friend Jun, JA7SSB).

There are two things I love more than anything else in ham radio. One is dx'ing and the other is ragchewing. This was good week for both. DX-wise, it was a great week with 5 new "countries" added to my current total of 145 worked (only 53 confirmed, but I've only been at it since September of 96). The prime one was BS7H on Scarborough Reef, but I'm equally happy about T30WP in Western Kiribati out in the Pacific (that one I got on 3 bands, 'cause my long term goal is DXCC on 40 only).

And ragchewing was just as great--- excellent QSO's with PP6CW in Brazil, JA3OVQ, CE3AWY, JA8BGR on Hokkaido, JR3GWI, JH1GNU, VK5FOX in Adelaide, my 40 meter dx'ing buddy K7GT in the San Francisco area, and then for the first time meeting W6ALO (whose QTH is only a few blocks from my office) and W6HJ, originally licensed as "1HJ" in the 20's, who lived in my town for 36 years and now lives in Florida.

Some other highlights--- QSO's with Masa, JA4CYG who is the "sparks" on a 50,000 ton freighter, whom I'm now following on a second voyage between Australia and Japan with QSO's almost every day amounting to 7 or 8 contacts; a fascinating chat with VE6EPK about the effect of aurora on propagation conditions up in his neck of the woods; listening for half an hour to, and then working, Ron (ZL1AMO) as 3D2RW, one of the best CW ops around in my book; discovering a 20 meter band opening at midnight into Australia; and sharing a common interest in Captain James Cook with Drew, VK3XU in Melbourne.

So those are some of the fine and memorable experiences I had during a few days in May. "Ah," you're probably saying to yourself, "the guy probably has the California version of a superstation with lots of towers, beams, linears and all the rest. I couldn't do that with my little peanut whistle!" Not so---

My station is average I guess, sophisticated in some ways, modest in others. The transceiver is a several year old TS-940S that I bought used from a friend (WK6C)...it's an excellent CW radio (that's my real love) but with just 100 watts out---not a powerhouse (no money and too many really close neighbors, I live in a condominium). I've got an MFJ-941E antenna tuner (from the local swap meet) that is the link between the 940 and my antennas.

Antennas are three dipoles---one for 40/15M and two for 20M. All three are strung on the edges of a triangle on my roof whose three sides are about 40

feet, 60 feet, and 75 feet. None of the antennas is more than 5 feet above the roof. The two 20 meter dipoles are oriented perpendicular to each other so that I can cover both Asia and Europe.

A computer is in the shack and the only really current technology involves interfacing the 940 with the computer, so that with a couple of different logging programs I can keep my log on the computer and automatically pick up frequency and mode from the rig (and date and time from the computer)and in contests control the rig and send CW from the keyboard.

And finally, my trusty Vibroplex bug. I've tried keyers and paddles, but nothing ever gave me the same satisfaction as using that bug in long, pleasant CW QSO's.

So, in summary, if you'd like to chase a little dx, meet some great people, and do some serious ragchewing, get back to those books, and back to that code practice.... it's all out there, just waiting for you. It doesn't take an arm and a leg in equipment and antennas, and if all that's there now, just wait 'til the sunspot numbers hit the 100's!!

See ya on the bands!!!

:From: jmclaugh@cscc.edu
:Subject: Adjusting Mic Gain for SSB on a Kenwood TS-430S
:
:I am realatively new to working any HF (I just passed my 5 WPM 2 weeks
:ago) and am trying to learn how to work 10 M SSB. I am pretty sure my
SWR
:is ok (don't have a meter or tuner yet. I am waiting until next week
and
:am going to pick one up at Dayton Hamvention). My question is that I
need
:to adjust my mic gain so that I can lower the power out to about 200
Watts
:PEP. According to the rig's manual, you do this with the mic gain. I
:know this is really hard to do with out a power meter, but even if I can
:get it close (say 190 or heck even less), that would work for now.
Also,
:does the Carrier Knob do anything on SSB?
:
:Joel McLaughlin
:N8VQJ
:--
No problem, Joel. Here we go.....

Get a tuner with a meter in it - an MFJ Model 949E is ideal for your
application.

The CAR knob controls power output on ALL modes.

The MIC control only controls mic gain. With PROC OFF, you will need
more gain than with PROC ON. Unless you have a super mic, keep the PROC

ON. Ask others how it punches thru and how it sounds with it ON and OFF.

To adjust your rig, first get everything hooked up to the tuner and from there to the antenna. The MFJ 949E has a dummy load that can handle full power - the max. the rig can put out is 100 watts anyway.

1) Turn CAR all the way CCW (min.output)

2) Press CW. This gives you a solid output, not SSB. Always tune up on CW.

3) Press the ALC button on. This will let your ALC meter measure the Automatic Level Control.

4) Press SEND. This is the same as pressing the code key.

5) Turn CAR CW until the ALC needle just moves a bit.

4) Adjust your tuner for minimum SWR. As you do so, the SWR needle will fall to 1 and the Forward power will give an indication.

5) Now increase CAR until the ALC is about 1/3 to 1/2 scale.
You should see 100 watts (or thereabouts) on the Forward needle of the tuner.
If curious, switch the rig's meter to IC and look at the current draw. It will be close to 20 amps.

6) Press REC. (don't run for more than a few seconds on SEND until you get tuned up).

7) If you want to work code, you are now all set to do it.

7) If you want SSB, press LSB on 80 or 40M, or for all higher bands press USB.

8) Your rig has VOX, but put that switch so the VOX is off and use the mic switch to start. Talk at a normal level into the mic. Increase the MIC knob until you kick the ALC needle, but not beyond the right end of the stripe on the rig's meter. Any more and you will distort.

What you have now done is get the rig's power set with a solid CW signal, using the CARrier level control, and watching to see the ALC is not exceeded, and that you are seeing about 20 amps of Ic and 200 watts out on the tuner's meter. Next,
you have decided what mode to operate. If you pick CW, have at it. If you pick SSB, keep the ALC within the stripe by using the MIC gain control. If you turn the speech PROC ON, you will need less MIC gain, and you will see that as you talk, the ALC, Ic, and output power stay at a rather high average level. With PROC off, you will sound more mellow, but the meters will sway in direct proportion to voice power, and some added MIC gain will be needed. Use the hand mic or some wide range mic if you plan to operate carrier-current AM.

You can run QRP by lowering the CAR control any time you want.

If you run digital with a TNC, never run the rig over 30 watts SSB. That means you should set the ALC on CW so the needle just touches the left end of the bar on the meter. Check your output power - it should read about 30 watts. That is safe for continuous operation like digital is. Also do not use the speech PROCessor if you are running digital or AM or FM. It has no effect on CW.

To calibrate your CW so you can zero beat, here is the trick (Kenwood is too stupid to put a "spot" switch on the rig). And your sidetone will no doubt not match the zero-beat tone. The trick: Tune in WWV or pick CHU on 3.330MHz. Carefully tune the signal on AM, then switch to both USB and LSB until you get the tone to sound the same on all three. Now, go to CW, and listen to the note. If you tune CW sigs to that note, you will be zero beat with them. Since it is hard to remember the audio tone note, push in NOTCH. Adjust the NOTCH knob until the signal is the weakest. It will be at about 3 or so, probably. Leave the NOTCH knob there - even mark the cabinet with a ball-point pen where that notch knob makes the CW signal the weakest. Now, when on CW, you can find the guy you want to work, punch in the NOTCH button and tune across the signal until it is weakest, then release the NOTCH button again. The tone should sound just right.

Now all you have to master is the memory controls! Leave that until last.

Good luck, and let me know how it all works!

I normally ignore your "welfare" rhetoric, but this is
just too much. I'm guessing you're writing abou the
Technician license without code as a welfare license.

Free clue: code was dropped from the Technician license
over 6 years ago.

Ham radio has not, despite your colorful descriptions to the
contrary, gone to hell in handbasket.

Do you research your facts, or save the trouble by just making them
up? ;-)

The IC-T21A 2 meter radio and T41A UHF radio. Both had a bonus band receive. the T21A could receive on UHF and the T41A could receive on VHF so both radios required a dual band antenna.

>that signal strength would be independent of frequency. Or would this
>be due to attenuation by water vapor, etc. in the atmosphere?

Signal strength is independent of frequency *if* antennas of equal effective aperture are used. The *apparent* increase in path loss with frequency is an artifact of using antennas of constant electrical size rather than constant physical size.

As you know, signal strength falls with the square of the distance from the source. The reason for this is that the spherical angle subtended by the signal energy expands with distance. In other words, the signal spreads over a greater area with increasing distance. To capture that energy, an antenna has a certain capture area or effective aperture. That area is a function of *physical* size. Thus a halfwave dipole at 70 cm has only 1/3 the effective aperture of a halfwave dipole at 2m. But if you use an antenna of constant physical size, such as a parabolic dish of 5 meters diameter at both frequencies, the effective path loss will be the same at 2m and at 70 cm.

>day and night for line-of-sight reception (maybe there is more
>background noise from the sun during the day?).

This is most likely the result of temperature inversion. Variations in atmospheric density with height can refract radio signals. Cooler air is denser than warm air and thus refracts radio signals to a greater degree. When a temperature inversion occurs, cool air overrides warm surface air. In strong inversions this can form a duct, essentially a waveguide, which can trap radio waves. If you are trying to access a node whose antenna

is above the layer, the signal can't reach it, or at least not as much signal will reach it. The signal is trapped in the duct. Now ducts can carry signals to great distances, but signals travelling outside the duct are attenuated. At night the inversion breaks up, and this extra attenuation disappears.

Date: 1997-05-08 00:00:00 UTC
From: FORDHADR@jmu.edu
Message-ID: <5ksmt9$k39@owl.jmu.edu>
Source record: 198924

Preparing for a solo field day trek, I have a question
regarding 13-volt-DC to 120-volt-AC power inverters...
the small ones (<300 watts).

Do this things make a hum when they are operating?
For example, if you are using one inside a tent, will
it disturb a person sleeping in the tent by humming
(60hz AC hum)?

The rechargers for the computer batteries do not hum
audibly unless your ear is within a foot of the transformer.
But will the inverter hum?

(No, no need to reply asking why we're using rechargers...
the question applies to LOTS of inverter uses... such as
electric blankets, etc.)

The sharing of your experiences would be appreciated.

That would be true if and only if there was no testing whatsoever in order to be an amateur. In contradiction to Roll's notion that one is "not forced" to learn Morse code, then would he be kind enough to show us that one would not be liable to government sanction if an individual were to operate on the HF frequencies without having proven that one can demonstrate proficiency in the amateur bands? The threat of monetary fines or even imprisonment for the unlicensed operation of a station would likely seem to an exercise of government power. That is indeed a "threat" - if you don't play the game by the government's rules, they will threaten you with sanctions.

> Second: Morse code has much more than "entertainment value"
> for personal use. It has unmistakably advantageous attributes as
> the simplest, most basic, lowest power, highest S/N form of
> electronic communication available. Morse DOES do all the things
> you "anti-coders" claim it doesn't, and that is an undeniable FACT.
>

No, Roll in incorrect - it has been shown theoretically and practically Morse code no longer has those attributes as what Roll believes. Moreover, since there are better modes to use, that can operate in conditions that make Morse code inoperable, the simplicity characteristic holds no value either. In other words, so what if it is simple - it can't get the job done like these better modes.

> Third: We're talking about the AMATEUR Radio Service. We're not
> competing with commercial communications systems at any level
> for any purpose. They are being used as a basis of comparison, but

> skills are not lost in the mad rush toward higher "throughput."
>

Yes indeed we are talking about the AMATEUR service. Yet it is the pro-code testing advocates who continue to proclaim that Morse code capabilities should be maintain by a government sponsored welfare program for the support and continuation of a mode of communications; a mode of communications that is acknowledged by all other services to be ineffectual. If those other services, whose raison d'etre is to render safety and distress communication has abandoned Morse code for their communications infrastructure, one can only imagine the mirth that would be generated in the fora outside of amateur radio of the notion that amateurs with there out-dated notions and lack of capabilities are about to save the world. Perhaps Roll doesn't give a damn about their opinions, but the rest of us amateurs should. Don't forget that the amateur spectrum is not inviolate, meaning what the government giveth, the government can taketh away. The representatives of these other services will have an impact on any questions as to whether amateur radio is capable of supporting other services during times of emergencies. Morse code isn't involved in these situations now, even with amateur participation, and maintanence of a skill with which amateurs are peripherally involved is only wooden headed. Wooden headedness is that behaviour that an individual or organization even though that behaviour is not in the interest of that individual. Continuing the Morse code testing program is wooden headed because that program does not make our case any easier when the tough decisions are being made for the re-allocations of spectrum.

> "Throughput" is fine, and to the extent that I'm also an advocate of
> the amateur digital modes, I'm all for it. But Morse code, and its
> testing requirements, exist for their own good, practical reasons.

Fine. Let it survive on its own merits, rather than having to depend on a government program forcing individuals to have to learn that encoding scheme prior to being authorized access to the amateur allocations below 30 MHz.

> The fact that this debate is ancient shows us that there is good reason
> for retaining the Morse requirement, and at present speed levels.
> Obviously, the regulatory bodies have agreed, through the entire
> history of the Amateur Radio Service, that Morse code proficiency is
> a valuable part of ham radio.

>

No, that is incorrect. Morse code testing was demanded as a tool to mitigate interference between amateurs and commercial stations when they shared the same spectrum. Once amateur were allocated their own piece of the pie, so to speak, there was no need to stipulate that an individual must learn how to learn how to use a spoon, if indeed they would rather use a fork.

> >There's no safety reason for morse, no technical reasons

Don't be so sure... I've known people who have memorized the entire bible.
Word-for-word. That's much more than the equivalent of 550 test questions.

And what about people who perform live theater? They have to memorize the
entire script. And I'm sure there are other examples of memorization that far
surpass that.

Better check the lawbooks, dude. If YOUR name is on the account and YOU
give someone the password to YOUR account, you then accept responsibility
for their actions. The "possible litigation" for misuse will be filed
against YOU!

2491. Help with RFI problem / Garage door opener

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-09 00:00:00 UTC
From: N7LN@qsl.net
Message-ID: <5kvtld$5j4@esnews.corp.es.com>
Source record: 198789

Hi.

I've currently got an RFI problem with my garage door opener. Actually, it's kind of amusing, but nonetheless, I want to eliminate it.

I have a G5RV dipole strung up in the rafters of my garage. I have the feedline at the apex of one side of my garage, and the lines run down the sloped roof and then runs parallel to the ground along the sides of the roof. This new antenna seems to get out rather well and I've been _quite_ pleased with it, except for one problem: when I transmit, my garage door opener starts wigging out. It will go up and down and up and down a few inches and just annoy the heck out of me.

My wife first noticed the problem and thought we had prowlers and called me up to investigate. But obviously as soon as I came up from the shack, the problem stopped. After a few days of this we finally figured out what it was.

The garage door opener is in the middle of the garage and is surrounded on three sides by the dipole antenna. The antenna is just pounding the opener receiver with RF waves and giving my garage phantoms. I would really like to end the RFI problem rather than fiddling with the power to the opener, as I don't currently have a switch on it.

Has anybody ever experienced anything like this and come up with a good solution? Will a simple low-pass filter work for me? I think the garage opener frequency is 139 Mhz -- about 2 meters. Shouldn't that be easy to filter?

Anyway, ANY suggestions on solving my problem would be greatly appreciated.

Thanks,
Darvell (N7LN)

archives given to museum; FCC appointments

BS7H SHUTS DOWN EARLY

A big disappointment for DXers hoping to put a new one into the log: the BS7H 1997 DXpedition shut down just three days after it got under way. The DXpedition went QRT on May 3 at approximately 0645 UTC, a victim of international politics involving the People's Republic of China and the Philippines. The DXpedition had planned to be on the air for a week. Scarborough Reef is undisputed Chinese territory, but the Philippines claims the shoal is within its 200-mile exclusive economic zone (EEZ). That situation set the stage for trouble.

DXpedition spokesman Tim Totten, N4GN, reports that he got details from several of the BS7H 1997 team members who were still in Guangzhou, China, as of earlier this week. On April 28, just hours after the BS7H ship departed from Guangzhou, the Philippine government announced that three Chinese military ships were spotted in the Spratly Islands near Mischief Reef, which is claimed by both the Philippines and China. Philippine President Fidel Ramos lodged a diplomatic protest with China and ordered an increased military presence in the area. Although the Spratlys are some 300 miles south of Scarborough Reef, the BS7H crew and the Chinese research team (in separate PRC Ocean Bureau vessels) soon found themselves embroiled in the

escalating tensions.

On April 30, the first day BS7H was on the air, two Philippine military reconnaissance jets flew over the reef at low altitude. The next day, Totten relates, a Philippine Navy ship arrived at the reef, followed by a second military vessel a bit later. Totten says Philippine Navy officers visited each of the three BS7H operating sites. "They were reported to be very friendly," he said. But in discussions with the BS7H team and the captain of the lead Ocean Bureau ship, the visitors asserted the Philippines position that Scarborough Reef was within the Philippines EEZ. The Chinese stated their position that Scarborough Reef is in PRC territory and provides the basis for a 12-nautical-mile territorial sea surrounding the reef. Totten says the Philippine Navy officials seemed satisfied that the DXpedition did not constitute "economic activity" subject to treatment under an EEZ claim (such as commercial fishing or oil drilling), but the Navy officers insisted that while it was okay for the Chinese ships to pass through, they could not stop in any one place for a prolonged period of time. Totten said that when the Chinese Ocean Bureau captains were unable to reach any agreement with the Philippine Navy officers on this point, they decided to leave the reef and return to Guangzhou rather than risk escalating tensions.

Immediately following the premature BS7H shutdown last weekend, no one would talk publicly about the reasons behind it. A DXpedition Web site bulletin simply said it was "not entirely clear at this time" but that everyone was safe and in good health. Totten said he held off on a formal announcement because he wanted to get the facts first. But press reports fueled speculation. A story in The Manila Times on Tuesday said that Philippine military authorities deployed a patrol ship to Scarborough after "two Chinese ships" were spotted near Scarborough.

For more information, visit the BS7H 1997 home page at http://www.iglou.com/n4gn/sr/ or contact Tim Totten, N4GN, e-mail n4gn@iglou.com; fax 502-239-7766.

HAMS MAINTAIN FLOOD EFFORTS

North Dakota Section Manager Bill Kurtti, WC0M, reports that the need for ham radio assistance "is pretty well over" in that state's flood zones along the Red River, but some hams continue on duty. "People are going back home to clean up the mess and, for many, it will require a new start," Kurtti said. In some cases, he said, homes and jobs are gone.

Kurtti said hams continue to assist the Salvation Army with flood recovery efforts, and he plans to visit the station in Grand Forks. He said the Salvation Army station has continued to be very busy.

The Salvation Army's presence has become more long term as the organization continues to operate four canteens to feed those displaced by the flooding and looks toward the clean-up effort. Maj Jim Garrington in Grand Fork said the Salvation Army has been using ham radio volunteers so the feeding centers can stay in touch with the control center. "They've been just as good as gold," he said of the ham-volunteers. "It's been a real, real

fruitful relationship." The relief effort is feeding upward of 2700 people a day (one of the Salvation Army staff members at the Grand Forks center is Capt Cliff Mackey, KB0TXE, of Leavenworth, Kansas). Garrington said some hams are doing double duty--helping with driving or serving meals as well as with communication needs. He said the need for volunteers in general--not necessarily hams--is "huge." Both Kurtti and Garrington anticipate the need for ham radio assistance will increase once evacuees are allowed to return to their homes and the cleanup gets into full swing.

Minnesota SEC Gary Peterson, N0ZOD, his wife, Gladys, KB0TUT, and several other hams from Southeast Minnesota visited the flood zone earlier this month. He described a communication facility at the Crookston, Minnesota, Salvation Army distribution center that "consisted of a small operating position with a dirt floor in a dark, cold corner of the warehouse," where local hams staffed the center all day long. The group included several newly licensed hams. Peterson said East Grand Forks, Minnesota, ARES members at one point even dispatched fire units in that city when the 911 system went down.

Peterson cited several clubs for special mention, including the Rochester ARC, the Winona ARC and the Redwing ARC. Overall, it's estimated that hundreds of hams pitched in during the flood emergency and recovery effort. Peterson also had words of praise for East Grand Forks (Minnesota) ARES EC John Engle, WA0LPV, and Grand Forks (North Dakota) ARES EC Gerald Nies, N0NGW, who manned ARES operations from their respective positions on opposite sides of the Red River during the flood.

Peterson said he was impressed by the dedication and hard work hams were putting out to help others, taking time off from their jobs and using their own gear. "It is such a pleasure to be associated with these people," he said.

DAYTON 1997!

Reputedly the world's largest Amateur Radio gathering, the Dayton Hamvention for 1997 gets under way Friday, May 16, and continues through Sunday, May 18, at Hara Arena, Dayton, Ohio, sponsored by the Dayton Amateur Radio Association. The flea market opens at 8 AM on Friday and at 7 AM on Saturday and Sunday. Exhibits open at noon on Friday, and at 8 AM on Saturday and Sunday. Hamvention advance tickets ($13, valid all three days) will be available at the Hara Arena ticket office until May 14. Tickets at the door ($15, valid all three days) will be sold starting at noon Thursday, May 15. Tickets for the Hamvention banquet are $25 and available only in advance. The banquet is Saturday night at the Convention Center in downtown Dayton, and ham-astronaut Ron Parise, WA4SIR, will be the featured speaker. During the banquet, World Radio Laboratories (WRL) founder Leo Meyerson, W0GFQ, will receive the award as the Dayton Hamvention's Amateur of the Year. The Technical Excellence Award will go to Al Ward, WB5LUA, an accomplished VHF, UHF and microwave specialist. The special achievement award will be presented to Joseph J. Fairclough, WB2JKJ, a pioneer in using Amateur Radio in the classroom.

Of course, the League will be represented, offering a wide variety of ARRL publications and products, volunteers and HQ staff members to answer questions or just to hear your views. Some staffers will be doing programs during the Hamvention. Antenna guru Dean Straw, N6BV, will be on the Antenna Forum, Friday, 1:30 PM, in Room 5. He'll be talking about what's new in the new Antenna Book. Rosalie White, WA1STO, will take part in the SAREX portion of the AMSAT Forum, which gets under way Saturday, 12:45 PM in Room 5 (the SAREX segment begins at 1:45 PM). Panelists include Ron Parise, WA4SIR; Frank Bauer, KA3HDO; and Will Marchant, KC6ROL. Jay Mabey, NU0X, will be one of the presenters at the ARES forum on Saturday, 9 AM, in Room 2. He also plans to attend the National Frequency Coordinators Conference (NFCC) meeting Saturday, 11:15 AM, in Room 5. ARRL First Vice President Steve Mendelsohn, W2ML, will take part in a panel discussion, "The Future of Ham Radio," Saturday, 3 PM, in Room 5.

The ARRL forum will be Sunday, 10:15 AM, in Room 5. ARRL President Rod Stafford, KB6ZV; First Vice President Mendelsohn; and Great Lakes Director George Race, WB8BGY, are among those expected to be on hand.

For more Hamvention information, set your Web browser to http://www.hamvention.org/.

FIVE HAMS ABOARD FOR MAY 15 SHUTTLE-MIR MISSION

NASA has set May 15 as the official launch date for space shuttle Atlantis' sixth docking with the Russian Mir space station and a trip back home for ham-astronaut Jerry Linenger, KC5HBR. The STS-84 launch window opens at about 4:08 AM EDT on May 15. STS-84 is the sixth in a series of docking missions between the shuttle and Mir and the third involving the exchange of American astronauts. Linenger, who has been a Mir crew member since January 15, will swap places with Michael Foale, KB5UAC, who will spend more than four months on the station before returning to Earth on the STS-86 Atlantis/Mir docking mission in September. Astronaut Wendy Lawrence, KC5KII, will replace Foale in September.

Several other hams will be on the STS-84 crew. They include Commander Charles Precourt, KB5YSQ, and Mission Specialists Edward Lu, KC5WKJ, Carlos Noriega, KC5WKK, and Jean-Fran*ois Clervoy, KC5WKG.

Late last month, Linenger--more than 100 days into his four-month research mission aboard Mir--conducted his first spacewalk. He was joined by Mir Commander Vasily Tsibliev. It was the first time a US astronaut conducted a spacewalk while wearing a Russian space suit.

Dave Larsen, N6CO, reports that Foale has received FCC approval to speak with unlicensed third parties via ham radio during his stay on Mir. Foale also has permission to use the German Space Amateur Funk EXperiment (SAFEX) equipment on Mir in addition to the 2-meter gear. The STS-84 ham-astronauts also may use the Mir equipment during the docking mission.

Matt Bordelon, KC5BTL, of NASA said Foale has promised to keep the packet system on as much as possible. "He enjoys talking with people and looks forward to experimenting with ham equipment onboard Mir," Bordelon said. Jay Apt, N5QWL, shares an office with Foale, and Bordelon says Apt shared his

experiences of visiting the Mir station with Foale. "Mike will be busy the first few weeks onboard Mir, but after that he will be on-the-air," Bordelon said.

For more information on STS-84 (and pictures of Foale and Linenger), check out NASA's shuttle Web site at http://shuttle.nasa.gov/index.html/.

OL' SOL STUCK IN THE DOLDRUMS

Solar observer Tad Cook, KT7H, Seattle, Washington, reports: Geomagnetic conditions became progressively quiet over the week, after disturbed conditions began the month. Last week's report contained an erroneous average A index: the actual average was 7. The A index this week averaged 9.6. Solar flux and sunspot numbers were still the same, stuck in the doldrums with no sign of increased activity from a new solar cycle.

A new projection from the NOAA Space Environment Service Center forecasts a smoothed solar flux of 100 for this July, but so far the predicted values have been increasingly ahead of actual measured values. It shows the expected smoothed solar flux for January through April of this year as 77, 80, 84 and 87, while the actual monthly averages have been 74, 73.8, 73.5 and 74.5. The projected smoothed flux for May is 91, but combining the

actual flux for the first eight days of May with subsequent projected values for the month shows an average of only 71.4, so the gap between the actual average values versus the projected smoothed values has grown over January through May from 3, 6.2, 9.5, 12.5 to 19.6. This same forecast projects a smoothed solar flux of 149 and sunspot number of 99 one year from now. One can only hope that reality will catch up with the projection.

Values for May are expected to stay the same, in the low 70s for solar flux with minimal sunspot numbers. Possible disturbances could appear around May 13-21, with the worst periods around May 14, 15, 18 and 19, and disturbances again around May 28 and 29.

As the days get longer, expect noise on the lower frequencies to rise, and less of the good low band propagation that we experienced on winter nights. Look for longer openings to the west on 20 meters in the evening, particularly if we see a rise in solar flux.

Sunspot numbers for May 1 through 7 were 0, 0, 13, 11, 11, 11 and 11 with a mean of 8.1. The 10.7-cm flux was 72.2, 72.1, 71.1, 70.9, 72.3, 72.1 and 72, with a mean of 71.8, and estimated planetary A indices were 20, 16, 9, 7, 6, 4, and 5, with a mean of 9.6.

RAC BOARD MEETS IN OTTAWA

The Board of Directors of Radio Amateurs of Canada (RAC) elected the RAC Executive for 1997 at its annual meeting in Ottawa April 18 and 19:

* President and Board Chair: J. Farrell Hopwood, VE7RD
* 1st Vice President: Douglas E. Leach, VE3XK
* Vice President of Government Affairs: James G. Dean, VE3IQ
* Vice President and General Counsel: Timothy Ellam, VE6SH
* Secretary: David Evans, VE6DXX
* Treasurer: Dr. J. Kenneth Pulfer, VE3PU

The Board honored the passing of two of Canada's extraordinary Amateurs, Noel Eaton, VE3CJ, president emeritus of the International Amateur Radio Union (IARU); and Robert Bishop, VE3JAB, a former director of the Canadian Amateur Radio Federation (CARF) and, until May 1996, an RAC Director for the Ontario North Region.

Board members learned that Industry Canada Assistant Deputy Minister Michael Binder has promised to move forward on the joint effort to delegate the administration of the Amateur Radio Service in Canada to a nongovernmental service company affiliated with RAC (see The ARRL Letter, Vol 16, No 9). The effort was halted earlier this year, pending the establishment of long-term funding process by Industry Canada. Binder has said he would phase-in as many aspects of the plan as possible over the next several years.

The full text of the minutes of the RAC board meeting will be available on the RAC Web page, http://www.rac.ca, and in a future edition of The Canadian Amateur magazine.

IN BRIEF:

* This weekend on the radio: The Oregon and Nevada QSO Parties, and the ARRL VHF/UHF Spring Sprints for 902, 1296 and 2304 MHz are scheduled for this weekend. For the Spring Sprints, please see April QST, page 98 for details. For the two QSO Parties, please see May QST, page 97 for details.

* W1DG departs HQ staff: Mike Gruber, W1DG, the ARRL Lab test engineer for approximately the past 7 years, left the League May 2 for a new employment opportunity. The good news is that Mike has agreed to be appointed an ARRL Technical Advisor, so we at HQ will continue to have the benefit of his expertise and experience. Mike Tracy, KC1SX, the former TIS coordinator, has assumed the job of test engineer.

* W1AW on air for CT QSO Party: A contingent from the Candlewood Amateur Radio Association visited W1AW during the weekend of May 3-4 to put the Maxim Memorial Station on the air for the Connecticut QSO party. W1AW counted as a five-point contact for the annual event. The CARA group logged 209 QSOs, including some on 6 and 2 meters.--Joe Carcia, NJ1Q

* Vanity program still popular: During April, the FCC in Gettysburg, Pennsylvania, reports that it received 739 applications for the vanity call sign system: 315 paper and 424 electronic.

* SETI League honors Indiana ham: The SETI League has honored Daniel Boyd Fox, KF9ET, of Bloomington, Indiana, by presenting him with the second annual Bruno Memorial Award for significant technical contributions to the SETI League's Project Argus search for intelligent radio signals from elsewhere in the universe. The Bruno Award honors the memory of Giordano Bruno, an Italian monk who was burned at the stake in 1600 for daring to contemplate the existence of other inhabited planets. Fox has developed a basic radio telescope block diagram that's been duplicated by dozens of other experimenters and built one of the first amateur listening stations. In December, the SETI League reports, he received "an interesting (though unconfirmed) candidate signal"--among the first detected in the SETI League's Project Argus search. Fox's SetiFox computer program is widely used by project participants.--SETI League

* Marconi archives given to museum: Guglielmo Marconi's archive of scientific equipment and documents relating to his years developing the first practical wireless system early this century is to be given to the Science Museum in London by GEC-Marconi, the present owner. Earlier this year, plans to auction the archive, valued at more than $1 million, were scrapped after complaints from Marconi's daughter and others that the archive was too historically important to be broken up and sold off (see The ARRL Letter, Vol 16, No 9). Among other things, the collection of more than 1000 items includes Marconi's first patent for improvements to wireless telegraphy, a letter from Queen Victoria and a radio message transmitted from the sinking Titanic. Part of the archive will be displayed in a Marconi center to be set up at the Chelmsford site where Marconi built the world's first radio factory.--Electronics Weekly

* FCC appointments: David E. Horowitz has been appointed chief of the Private Wireless Division in the FCC's Wireless Telecommunications Bureau. Lisa M Higginbotham has been appointed deputy chief (Legal) of the Private Wireless Division. Richard "Rick" Engelman, N4COP, has been named chief of the International bureau's Planning and Negotiations Division.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

* The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Give me a break! To comply a Ham must remember the answers long enough to pass the test. Most can't tell a resistor from a diode from bandwidth from a line cord. Biggest technical ability is cranking up the mike gain then asking how things sound. Sorry, for the most part this an appliance operating hobby not a technical hobby. The technical exam is nothing more than a rite of passage.

Remove the wire that runs from you opener switch and see if that cures
the problem. If it does then you will have to use some kind of troid to
get rid of the rf.
If that doe not work you may be up a stump.

Yep. Things may be different now, but when I was a novice back in
1976, I filled up a couple of logbooks with contacts made in the
novice bands on 75, 40, and 10 meters. My first contact as a new ham
was with a nice Advanced ham in Montana. He was quite polite,
helpful, and sent nice and slow. In fact, many of my best CW QSOs
were with higher class ticketed hams. The other novices tended to be
even worse operators than I was, heh heh.

I certainly hope times have not changed that much in ham radio. I
made a lot of good friends on the novice CW bands, and enjoyed my time
there. Besides, you can always answer somebody else's CQ if nobody
will answer yours.

Whether or not this person does what is suggested, has nothing to do with his Ham radio hobby or scanner hobby for that fact. Because what one does in their personal life is no ones business. From listening to Hams on my scanner & SW radio I am sure there are those who live on the wild side, but when it they operate on the radios, they are the most repectable people. I do not think Hams will care what one does in their personal life, as long as they carry themselves in the correct manner here or on Amateur radio.

>70 cm.

Aha! That explains it. I just couldn't picture why more power would
be lost at a higher frequency then at a lower frequency. After all,
the power has to go somewhere! What you say makes sense. While I
will receive less power with a given type of antenna at a higher
frequency, the antenna will also be smaller, so I would be able to
have several antennas in the same space required for one antenna at
lower frequencies. Thus no power has actually been "lost".

I have 2 different types of commercial HTs (approximately from 1983 or so) which I would like to modify for our ARES group. They are:

Voice Patrol
model: HVP11

current freq: 39.90 MHz
visible markings: a circle with the letter F inside and a lightning bolt which starts in the upper left and finishes in the lower right.

ComCo
model: 802

current freq: 153 MHz
visible markings: none

Any information would be greatly appreciated.

I find it completely unbelievable that you can continue to make these
assertions with a straight face. Any competent communications text
written in the last 50 years puts the lie to these Morse Myths. That
you still claim them as "fact" says either you are entirely ignorant of
everything learned about communications since Shannon's 1948
paper, or that you are in strong denial of reality for ulterior purposes.

That's true. By concentrating the transmitted energy in the direction of the
receiver, we deliver more energy per square meter at the receiving location.
But that's equivalent to running more transmitter power, and doesn't directly
address the issue of path loss.

The point I'm trying to address is that receive effective aperture is traditionally
included implicitly in path loss figures because the equations *assume* a receiving
antenna of constant electrical size at the receiving location. That gives the misleading
impression that the medium of the path has greater losses as frequency is increased.
But that isn't so (at least until the upper microwave frequencies where absorption
does become a factor). It is an artifact of the assumption of constant electrical
size for the receive antenna. Once we recognize that implicit assumption, we see
that LOS path loss is a simple matter of geometry, and frequency drops out of the
path loss calculation if we use a receive antenna of constant physical size.

Unless the receiver is pretty poor, and there are a lot of business band transmitters in close proximity to the receive site, this should be a non-issue. It can happen at some busy commercial sites, but is unlikely to be the explanation for the dirunal variations he is experiencing. Inversion layer trapping is a more likely explanation. This is very common when one site is high and the other low, a typical situation with packet users and a packet node. (It also happens a lot with FM voice repeaters for the same reason.)

If you don't want to get caught, don't try it! Maybe if you know a cop or an ambulance driver who's an amateur radio operator you can talk to them over ham radio if they have one with them while on duty (some do in the Columbus, Oh area).

SB SPCL @ ARL $ARLX012
ARLX012 Hams maintain flood relief efforts

ZCZC AX12
QST de W1AW
Special Bulletin 12 ARLX012
From ARRL Headquarters
Newington CT May 9, 1997
To all radio amateurs

SB SPCL ARL ARLX012
ARLX012 Hams maintain flood relief efforts

North Dakota Section Manager Bill Kurtti, WC0M, reports that the need for ham radio assistance ''is pretty well over'' in that state's flood zones along the Red River, but some hams continue on duty. ''People are going back home to clean up the mess and, for many, it will require a new start,'' Kurtti said. In some cases, he said, homes and jobs are gone.

Kurtti said hams continue to assist the Salvation Army with flood recovery efforts, and he plans to visit the station in Grand Forks. He said the Salvation Army station has continued to be very busy. And he anticipated that the need for ham radio assistance could increase once evacuees are allowed to return to their homes.

Minnesota SEC Gary Peterson, N0ZOD, his wife, Gladys, KB0TUT, and several other hams from Southeast Minnesota visited the flood zone earlier this month. He described a communication facility at the Crookston, Minnesota, Salvation Army distribution center that ''consisted of a small operating position with a dirt floor in a dark, cold corner of the warehouse,'' where local hams staffed the center all day long. The group included several newly licensed hams. Peterson said East Grand Forks, Minnesota, ARES members at one point even dispatched fire units in that city when the 911 system went down.

Peterson cited several clubs for special mention, including the Rochester ARC, the Winona ARC and the Redwing ARC. Overall, it's estimated that hundreds of hams pitched in during the flood emergency and recovery effort. Peterson also had words of praise for East Grand Forks (Minnesota) ARES EC John Engle, WA0LPV, and Grand Forks (North Dakota) ARES EC Gerald Nies, N0NGW, who manned ARES operations from their respective positions on opposite sides of the Red River during the flood.

Peterson said he was impressed by the dedication and hard work hams were putting out to help others, taking time off from their jobs and using their own gear. ''It is such a pleasure to be associated with these people,'' he said.

ARLP019 Propagation de KT7H

ZCZC AP19
QST de W1AW
Propagation Forecast Bulletin 19 ARLP019
From Tad Cook, KT7H
Seattle, WA May 9, 1997
To all radio amateurs

SB PROP ARL ARLP019
ARLP019 Propagation de KT7H

Geomagnetic conditions became progressively quiet over the week, after disturbed conditions began the month. ARLP018 mentioned an erroneous average A index though, with the actual average as 7, not 49. The A index this week averaged 9.6. Solar flux and sunspot numbers were still the same, stuck in the doldrums with no sign of increased activity from a new solar cycle.

A new projection from the NOAA Space Environment Service Center forecasts a smoothed solar flux of 100 for this July, but so far the predicted values have been increasingly ahead of actual measured values. It shows the expected smoothed solar flux for January through April of this year as 77, 80, 84 and 87, while the actual monthly averages have been 74, 73.8, 73.5 and 74.5.

The projected smoothed flux for May is 91, but combining the actual flux for the first eight days of May with subsequent projected values for the month shows an average of only 71.4, so the gap between the actual average values versus the projected smoothed values has grown over January through May from 3, 6.2, 9.5, 12.5 to 19.6. This same forecast projects a smoothed solar flux of 149 and sunspot number of 99 one year from now. One can only hope that reality will catch up with the projection.

Values for May are expected to stay the same, in the low seventies for solar flux with minimal sunspot numbers. Possible disturbances could appear around May 13 to 21, with the worst periods around the 14th and 15th and the 18th and 19th, and disturbances again around May 28 and 29.

As the days get longer, expect noise on the lower frequencies to rise, and less of the good low band propagation that we experienced on winter nights. Particularly if we see a rise in solar flux, look

for longer openings to the west on 20 meters in the evening.

Sunspot Numbers for May 1 through 7 were 0, 0, 13, 11, 11, 11 and 11
with a mean of 8.1. 10.7 cm flux was 72.2, 72.1, 71.1, 70.9, 72.3,
72.1 and 72, with a mean of 71.8, and estimated planetary A indices
were 20, 16, 9, 7, 6, 4, and 5, with a mean of 9.6.

I'll bet it's coming in on the manual pushbutton cable. Most
garage-door openers have a little pushbutton hard-wired to the
mechanism, and the wire makes an excellent receiving antenna!

Try some Radio Shack choke cores on it, as close as possible to the
opener. (not the button) Actually, a quick check would be to simply
unhook the wire (again, at the opener, not at the button) and see if
the problem goes away.

It might also be necessary to put some chokes on the AC power cord.

> Frank KG9H

For some reason the ICOM 756 Has dropped in price BRAND NEW AT DEALERS
to $1920 such as ROSS DISTRIBUTING COMPANY. I think the arrival of the
Yaesu FT-920 is what is causing the price decline. Remember that the
Kenwood TS-870 went for $2600 and now costs $2200 brand new ! If I was
one of the original buyers I would be hopping mad!

HALO Rockoon Flight

Location: Hampstead, NC (20 miles northeast of Wilmington, NC)
Date: May 10th
Time: 6:15 am EDT (Balloon liftoff)
Time: any time after 8:15 am EDT (Rocket Launch from 105,000 feet)

Transmitters:

On Rocket:

Callsign: KE4ROC
1280 MHz FM ATV (3 watts into vertical antenna)
441.050 MHz FM (packet radio with APRS formatted GPS data)

Coverage range: 700 miles from apogee (entire East Coast, Southeast and
part
of Midwest)

On Launch Gondola:

Callsign: WB8ELK
434.00 MHz AM ATV:(live color camera view of rocket liftoff)
Horizontally
polarized.

Coverage range: 400 miles at launch altitude.
(Southeastern states and on up to New Jersey and Pennsylvania.)

HF coordination nets:

3.871 and 7.155 MHz... W4HTB and WA3USG net controls.

Raindate: May 11th or 12th.

That would be helpful. Myth and mystery are the antithesis to sound
science and engineering because they are based on false premises.

>To apply a little hard logic
>I would say that all testing regarding ham radio licensing is
>a rite of passage--not just the code segment.

That would be a mighty small (vanishingly small) amount of hard logic.

> What most of the critics of code requirements seem to miss
>or dismiss is the highly romantic nature of the hobby. Even the
>technical side is steeped in romanticism and all you have to do
>is read someones source code comments to see it creeping into the
>thought process.

Some people do have an unfortunate tendency to romanticise inanimate
objects. It tends to blur the vision, however, and impairs understanding
of the physical principles being employed. There is a rightful pride and
excitement about developing something, and there is the classic Ah Ha!
experience of suddenly grasping how something really works, but to
romanticise inanimate hardware serves only to distort and dilute those
genuine emotions.

> Perhaps ham radio has seen its time come and now it is time
>to hang it up.. I am quite serious on this point. The tecnhical

>requirements beyond regulatory items, are nearly all a priori
>exercises and mean little after the test is completed--much like
>your commentary on the alleged obsolete code requrirement.

I disagree completely. To comply with the regulatory items, an
amateur must have an understanding of the technical issues
which can cause improper operation. It doesn't matter if he is
operating homebrew or commercial equipment, either can exhibit
improper operation in certain situations. The technical exam is
to determine if the amateur is mentally prepared to note and
respond to those situations. For example, an amateur must
understand the occupied bandwidth of the signal he transmits
so that he can ensure it stays within the amateur band. He must
be able to recognize the signs of overdrive which cause splatter.
Etc.

> You can cite anecdotal events where this person or that
>person did some slick engineering in the amateur radio venue, and I
>guess we all can and often do so. But in the main most hams just want
>to get the ticket and get on the air and chat about radios and
>computers and what ever else seems to come to mind. If their
>silicon toy from Japan goes on the fritz, its off to the factory. All
>the Smith Charts and Software in the world are not going to fix the
>thing.

Probably not, of course the Smith Chart is most useful for solving
transmission line and antenna problems, not for fixing radios. And
amateurs do run transmission lines to antennas, and most amateurs
construct and install antennas for their Japanese toys.

Of course an amateur *should* be able to troubleshoot and repair his
radio. That's part of the continuing self-training amateur radio is supposed
to foster. But if he doesn't wish to do so, sending it out for repair is Ok, once
he determines that it does have a fault. We aren't *required* to repair our
radios, though we are encouraged to do so. We aren't *required* to build
anything, but we are encouraged to do so. And if we accept that encouragement,
we need the technical knowledge tested on the exams to ensure we don't make
matters *worse* and cause more interference and problems for other radio users,
or in some cases cause direct harm to ourselves or others.

> I really don't see what the problem is once you rationalize
>the whole mess. Just dues, Cecil. Code is just the dues you must
>pay for admission just like useless technical dues...

That's a pretty shocking thing for an amateur to say. One might expect
it from a CBer, but not from a member of a technical service like amateur
radio. I suppose it just illustrates how low some amateurs have sunk into
mysticism, romanticism, and other pseudoscience nonsense. I bet you fully
buy into the Morse Myths too.

Exactly. Until you get into the upper microwave region, the atmosphere
is basically transparent to RF. There are no significant *real* path losses
involved, just geometric dispersion. And that dispersion is not frequency
dependent.

(Note, this ignores D layer absorption at lower HF. That's another matter
entirely.)

Nope, not new at all and certainly not mistaken. I just enjoy watching
the anti-code crowd twist the argument to fit the agenda.

Then Linux tain't for you. I do think Linux is the way to go, put it is
up to you to dig it out. You don't have to be a guru to learn it (it
helps tho', heh heh) but it definately isn't spoon fed to you.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #215 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 16-May:
-
1. STS-84 Atlantis to Dock with Mir after Thursday Launch
2. Hams Still on Duty Providing Relief Communications after Flood
3. Marconi Artifacts Donated to London Museum, Not Auctioned Off
4. FCC Still Processing Gate 2, Makes New Staff Appointments
5. 1997 Dayton Hamvention Begins This Friday
6. "This Week" to be Pre-empted, Next Uplink is Monday, May 19
7. BS7H 1997 DXpedition Ends Early Due to Government Tensions
8. Upcoming Special Event Station Report
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Weekly Propagation Forecast
11. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
amateur radio club or repeater operator if "This Week in Amateur
```

Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

> built kits , learned electronics,and code.
> now the newbies want it all for free.
> aa7qa
>

The "newbies" and "would-be newbies" are NOT "wanting
it all for free" ... many are technical professionals that this
service desparately needs and all they want is the ability
to participate and contribute without having to waste large
amounts of their valuable time on developing "skill" in an
obsolete technique dating to 1847 when they're employed
at the leading edge of technology and want to experiment,
develop, and build systems using new technologies.

Ham radio would be FAR better off for welcoming these people
with open arms than by trying to keep them out with ridiculous
hazing rituals. The main problem is that most of the incumbents
are so technically inferior to the types of folks I'm talking about
that they can't begin to understand the benefits that they could
bring. And lack of understanding breeds fear, resentment, and
discrimination ... ham radio is in it's "dark ages" ... we need
major changes in licensing requirements/structure, technical
regulations, and ATTITUDES to create a rennisance ...

Carl - wa6vse

Speaking of spam Jeff. I had a Dejanews peek at your offerings on .dx
Of 16 posts by you none were on the topic of DX. I'll give you partial
credit for a couple addressing CW questions but none for the flames or
netcop stuff. You loose credit for recommending participation in bad
operating practices.

Read what you post before throwing stones. BTW how on earth do you swim
with those feet of clay.

Not cross posting to .dx Jerry

Actually Dale you are rather new. The ink is hardly dry on you upgrade
to general (congrats BTW) and you have not been a presence on the news
groups all that long. To get an idea of how long Cecil has been around
find out what OOTC means.

What Cecil says is true those who oppose continued code testing do not
call for an end to CW as an operating mode. Only the pro code testing
crowd seems to make this leap of faith. Let's try it again. We do NOT
advocate an end to code as a communicaions method only to stand-alone
code TESTING. Get it?

Jerry

May I suggest that you review a little bit of history and perhaps read,
maybe for the first time, Pascal, Descartes, Kepler, Newton,
Voltaire--the great minds who brought our planet fighting and
screaming into the age of romanticism--the foundation of what we
consider the age of scientific discovery and so on. You are
confusing my references to mysticism. It is the mystery of the
art of our hobby that catches the emotion of would be amateur radio
operators and the quest to understand and wipe away the mystery that
keep us all interested. The Ah Ha! As one of the fellows noted. None
of us understand it all and once the quest of the Ah Ha! Falls out
of the equation, then it gets real boring and interest wanes.
The Ah HA! Applies to both theory and code.

> > What most of the critics of code requirements seem to miss

Says Who? Do you speak to such emotional issues ex cathedra. What
evidence do you bring to the table that hams don't express or have
emotional attachments to inanimate hardware? Have you hugged your
radio today?
> > Perhaps ham radio has seen its time come and now it is time

> Etc.
>
Oh really! On one hand the regulatory demands for code proficiency
are to be cited as archaic while on the other hand the theory
requirements, which could be strongly argued to be nothing more than
a perfunctory rite of passage, is acceptable. Hmmmmm.

1. Set mike gain to "7" and talk is the general rule of occupied
bandwidth on SSB. If no one complains too much advance to "8"
and talk some more--and so on. Verrry scientific, Huh!

2. Carson's rule for bandwidth on FM (abbreviated form). Talk loud
and if the repeater does not drop out on voice peaks the
rig must be OK.

3. Antenna theory: Keep adding coax until the VSWR drops or
add automatic antenna tuner and make the transmitter happy even
though the antenna is a piece of dung.

4. Get out of band and the radio refuses to transmit unless the
magic diode(s) have been cut to permit CB or maritime transmission.
Yeah, it takes real technical know-how to run modern rice boxes.

5. Get out of your band segment and some self appointed band segment
will surely remind you where your station in ham life exists.

Yup, modern ham radio sure requires an intense knowledge of theory.

> > You can cite anecdotal events where this person or that

1. How many hams use Smith Charts?

2. Wow! 468/Fmhz now that is a real test of antenna design

>

>
Gary, I am merely using the same lame logic that you and Cecil and
a number of the self appointed saviors have applied to the no code
arguments. If we are going to do something to help the amateur
radio service survive, then we better damn well take a listen to
our bands and carefully analyze the content and demeanor of out
fellow ham's conversations. The survival of our hobby will not
be decided on whether or not we use code or tough theory tests as
a method of selection. Me thinks that the time may be at hand where
a good psychological screening would do more good to preserve the
hobby than any kind of radio related exam.

like yourself, I make my living in the electronics engineering
arena and for the most part I still enjoy the drill. Hamming for me has
also been a technical playground in which I still enjoy puttering around
in even though at times it is a busman's holiday. But Ham radio is a
multiple venue in which there is room for a variety of interests,
technical, operational, public service, social,and so on. To force a
tough Technical exam on all players is as Draconian as forcing All
players to copy 20 wpm.

If we are going to overhaul the Ham Radio membership entry
system we had better look to it from all views rather than developing
a single minded no-code solves all mentality. Perhaps we should
make the volunteer examinations more applications oriented. Instead
of a rote memory system of exams as the sole price of entry we should

have the VECs set up scopes, multi-meters, and other assorted test equipment and test the candidates for hands-on abilities in the analysis of circuits as well as the ability to see if they can apply their critical scientific thinking skills to the products that they will be using in their hobby. I certainly would be happy to donate my time and equipment to such an undertaking. It would certainly give you the assurance you cited as necessary to the well being of our hobby. If a new ham can see the results of over modulation be it am or fm perhaps he/she will have a better appreciation for the theory they have drool out when VECs ring the starting bell.

Your turn, Gary

> > the effort to eliminate code testing. The question is WHY
> > should anyone now be orced to learn morse code?
>
> No YOU don't get it! Why? BECAUSE IT IS A REQUIREMENT!

Many things that *used* to be "requirements" for LOTs of things
are not longer ... "requirements" are not inviolate things that must
remain unchanged for all eternity ... they must remain relevant in
terms of today's technology and the needs of society (in this case
the needs of ham radio in terms of future relevance and survival, too)
in order to remain valid.

I'm sure that lots of places used to have speed limits designed to
eliminate brake-kneck horse races down (then dirt) city streets.
Today, the same boulevards are wider, paved with asphalt and
have speed limits of 45-65 mph in many places, due to the use
of autos and changes in society's needs.

Your argument is akin to asserting that our interstate highways
should be dirt roads with horse and carriage speed limits.

> You ARE whining. If
> you don't want to learn code then take your sorry ass back to channel 19.

You're the "sorry ass loser", sir ... you're so ignorant and narrow-minded
that you can't begin to imagine any progress or change from the rut that
you settled God knows how long ago ...

> But just SHUT UP about it! You want to up-grade? Learn the code. Its that
> simple. You won't EVER get it changed. There are allot more of us than
> there are of you. Get it? Now, GO STUDY YOUR CODE!

We refuse to be forced or intimidated into "worshiping the false god"
of your "Morseodist religious cult."

You have not right to try to force that on others, nor will we grant you
that right ...

And as for your idea that we'll "never get the rules changed" and that
"there are a lot more of you (code fanatics) than us (who favor and
recognize
the need for modernization)" .... DREAM on ... the olde fartz are dying off
and the majority of licensees will soon be no-coders ... LEARN TO LIVE

WITH IT ...

I'm hoping this is just a joke.
If you have a radio that lets you transmit on the police/ambulance
frequencies you shouldn't even think about transmitting.
The same time you key the mic to say "hello", an officer could be calling
for help.

> Lemme see, in the utopic society CW gets abolished, then a little flood
> of people get their generals.... T

And a lot of people who wouldn't walk across the street to pick
up FREE Morse code keys/keyers/ paddles/etc. would have
the highest class of license based on their superior technical
abilities ... that would REALLY piss off the folks whose ONLY
claim to fame is the abilty to beep real fast ...

> the years pass, but there is still this
> vocal core of whiners that never spent the effort to upgrade their
> writtens, after all, the advanced written IS a bear, all that theory and
> stuff....

Give me a break ... I've worked over the years with hundreds and hundreds
of people who could pass the advanced and the extra written on any given
morning ... the ONLY reason many of them are not active, contributing
hams is that they're unwilling to waste their valuable time and energy
"perfecting skills" in "an art" from 1847 that they'll NEVER ...

>Well what the hey!! You know, ALL THEORY IS RENDERED OBSOLETE
> DUE TO THE ADVENT OF SMT CONSTRUCTION!!!

What an absurd assertion! You are obviously in the lower reaches of
the more technically ignorant portion of current hams if you really, truly
believe this ...

> I shouldn't have to take this test! Its unfair!!

ONLY rabid procoders have raised this red herring ... I have NEVER
seen a serious proponent of elminating code testing requrements

advocate the position that theory testing was irrelevant, or that theory testing should be eliminated ... that's just a FUD-based red herring thrown out by procoders to generate a smokescreen to cover the fact that there's NO logical, rational, compelling reason to keep code testing.

> If I can't work on my radio (because I don't have the
> tools or inclination) why should I be expected to know how and why it
> operates??!!

If you can't work on your radio, you're not meeting the technical objectives of the Amateur Radio Service ... to encourage self-training, experimentation, etc. to maintain and develop a pool of radio and electronics "experts."

> Do not be so resistant to learning something new

Talk about "the pot calling the kettle black" !!! Morse hardly qualifies as "something new", since it was invented in 1847. Those of us who WANT to learn and develop truly new things through experimentation, construction, etc. have been hobbled for decades by antiquated rules requiring 1847 "skills."

It is the vast majority of pro-code fanatics who are, in fact, "resistant to learning something new" ... they're the ones who insist that "real radios glow in the dark", "real hams beep fast", "no-coders aren't real hams", etc., etc. They're ALSO the ones who complain about "all that newfangled digital stuff", have totally irrational fears about the potential for interference from new (to hams) techniques like spread spectrum that could provide many benifits, and are generally too damned cheap to invest even the price of a couple of nice dinners in a decent restaurant in modernizing their repitoir of gear and modes ... if they have packet, it's 1200 bps AFSK on 2m and it's primary use is to connect to a DX cluster for spotting purposes ...

> Since people are going to be looking up my callsign to see what I have or

> have not done, I'll tell you now I'm a coded technician, yep only 5 WPM.
> So why should I advocate something I don't have? Because this is supposed

> to be a hobby, which means something fun, enjoyable, and which you become

> a better person by practicing.

No, it's SUPPOSED to be a service (which some people participate in as an activity they enjoy ... some are actually more interested in the technical aspects than the competitive games aspects that have perverted ham radio in the past several decades ...

Most people apparently don't consider Morse to be fun (Yes, some do, and that's fine ... nobody's trying to stop them from using it if they so choose ...) even the ARRL's own surveys show that less than 40% of current hams EVER use Morse ... and of that 40% many likely only

use it occasionally ....

> 2 months ago I decided to finally quit
> talking about it and upgrade, so I passed my general written and now am
> working on getting my code up to speed. I am planning on taking the
> advanced written in 2 weeks. It is difficult, especially the code part
> because with a job, wife, and two year old son my commitments do not
> leave much time for me to do things I want or would like to do. But thats

> life, you can either complain or get on with it.

Or you can work to change things ... there is no legitimate, valid,
rational,
compelling reason to force anyone to learn Morse ... if you really want to,
fine, but you should not be bullied into it by an antiquated testing
regieme
that bears no relationship to the technical or operational realities of
today,
let alone the future ...

> I do believe most everyone can do this if they put forth the effort,
> CERTAINLY much less effort than is wasted here on this subject.

Many of us don't believe that effort expended to achieve important
change and secure the future survival and growth of amateur radio
is "wasted" ...

>more specific info on repeaters worth tuning in.
>Any info on systems like ZIA that are on our route would also be
>appreciated!
>US-151 Dubuque, IA to Cedar Rapids

Try the 147.09 machine in Cedar Rapids, Iowa. It's linked to a wide area coverage system sponsored by the Southeast Iowa Technical society.
Check their web page at http://www..circumspect.com/seits for proper ctcss tone, but I believe it's 100hz.
There are also fome 440 machines in CR, but since I don't get up that way much I couldn't tell you much about those.
Give me a call on the 147.09, though as I monitor the link quite a bit.

>I-380 Cedar Rapids to Iowa City
Iowa city tied into same link system on 145.47, I believe. Also a repeater on 146.85 in Iowa city, but even though I bring it up when my lady goes to the University hospital for checkups once a month, I've never had a qso on the thing. I guess it's like my local, unless they know you they won't talk to you.

>I-80 Iowa City to Des Moines
Here we go, I get up that way quite a bit. Try 147.03 I believe in Newton Iowa. Also try 146.67, no tone last I remember, in Mingo Iowa.
Lots of friendly folks on 146.67. When you get to Des MOines, do 146.61 at Mitchellville, 114.8 hz ctcss. For 440, try 443.575, I believe at Mitchellville, and 443.500 at Mitchellville. Not sure of the tone, but I think 151.4 for the UHF machines in the Des MOines area.
The best which has a bunch of remote bases etc on it is on 443.400 in Des Moines, west actually, but from i35 south you should hold it for awhile.
Your best bet southbound on i35 will be the club machine on 146.94 out of Des Moines.

When you get a little further south, 146.73 in Lamoni Iowa should run you quite a ways.
I'm not as familiar with that one, but from Cr to Des Moines I know quite a bit of what's available.

On your way back:

Not sure what's in Western Iowa, but the 146.94 machine has a friendly bunch in Omaha. Between Omaha/council bluffs and Des Moines there isn't much that I know of, but once you ghet back to Des Moines, all of those I mentioned earlier should do you quite well.

>Thank you very much...
>73 de N9LEA

SAme to you, and no problem. If you'd like more info than I've provided here, email me at elspider@interl.net, as I've fudged the address to foil spammeisters.

All theory will not be obsolete in a few years, but at the rate technology
is progressing, there will be a lot of new stuff to learn ... that's why I
favor
retesting at each license renewal ... too damned many hams that passed
their tests in the 30s-60s took the attitude that there was nothing more to
learn and stagnated right there ... that's why they're technically ignorant
and inept today, and that doesn't do a damned thing towards meeting our
chartered goals and purpose ... that's why our bands are being taken away
for commercial services one by one ...

Lindsay, what your experience shows is that the Bronze Age sword is
superior to a rock tied on the end of a stick. But neither can stand against
a good steel blade, and certainly not against a rifle. Some of the modern
methods available to us are as far ahead of Morse as the steel sword is
ahead of the bronze one. And some methods currently denied us are as
far ahead as the rifle is above the stone on the end of a stick. That many
amateurs insist on using stone axes and bronze swords does not alter
this.

Speed is not the only attribute of these techniques, though it is certainly
an important and useful one. Accuracy and the ability to function in harsh
signal environments are also areas where modern techniques excel.
Some modern techniques can function when OOK Morse signals are
totally inaudible. That allows us to communicate when stone axe methods
are insufficient, and it also allows us to routinely run less power, which

is to the benefit of all who share the spectrum with us.

What the Morse requirements do is pander to the lowest common denominator. That's a sure recipe for mediocrity. It reinforces the Morse Myths, and makes the highest aspiration of an amateur to be the passage of faster and faster Morse tests. That's very very bad for the future of the service. This clinging to Morse makes us look ridiculous to the regulators, the public, and the industry which wants our spectrum. It shows we don't support the goals of the amateur service and that we merely waste the valuable spectrum granted to us with anchronistic re-enactments of historically obsolete communications methods and feats.

We're failing our training purpose because we are no longer properly emphasizing our role in training amateurs in *contemporary* techniques so that we can fill our role of augmenting military and civil communications in time of national need. And we are failing our role in advancing the SOTA because of this insistence on backwards compatibility. We play radio *games* very well, but that isn't a reason that we are granted spectrum.

Not to put too sharp a point on it, but you're an example of what I'm talking about. You admit you haven't even tried modern methods. Why is that? Is it because you've bought into the Morse Myths? Is it because you stopped self-training when you completed your exams? Is it because you're lazy? I don't know, you'll have to tell me. I'm not trying to say you're a bad person. But I am trying to say that the system we have in place tends to cause people to vegetate at a level of communications knowledge surpassed over 50 years ago. It doesn't clearly encourage amateurs to advance beyond what grandpappy did. In fact it is designed to perpetuate those antique techniques as the highest aspiration of an amateur. That's bad. Must we remain stuck in the Bronze Age of radio forever?

There IS NOT "mystique" to Morse any more ... 50 or 60 years
ago when communications were somewhere between nonexistent
and primitive, folks found Morse via radio fascinating and exciting
and it HAD some "mystique" ... today when compared to cellphones,
the internet, satellite communications and other modern, every-day
technology available to the ordinary citizen, it's "ho, hum" BORING
to the vast majority of people (except those who yearn for "the simpler
days" and pursue antiquated pursuits and collect antique curiosities)

>To apply a little hard logic

Hardly ... more like narrow-minded emotionalism ...

> requirements beyond regulatory items, are nearly all a priori
> exercises and mean little after the test is completed--much like
> your commentary on the alleged obsolete code requrirement.

Testing needs to be made relevant and methodology fixed to assure
that applicants really understand the radio/electronics theory, rather
than having simply stuffed some answers into short term memory.

> You can cite anecdotal events where this person or that
> person did some slick engineering in the amateur radio venue, and I
> guess we all can and often do so.

And there'd be a LOT more of that if the Morse hazing ritual were
abandoned, technical rules modernized, and that sort of invention
and innovation were encouraged rather than looked at with fear and
distrust by a bunch of incompetent olde fartz who can't understand
the benefits and fear what they can't understand ... you know, the
"get the hell off of 'MY' frequency with that newfangled digital stuff"
crowd ...

> But in the main most hams just want
> to get the ticket and get on the air and chat about radios and
> computers and what ever else seems to come to mind. If their
> silicon toy from Japan goes on the fritz, its off to the factory.

If more hams were more technically comptent, they'd be more
able to fix their own gear ... contrary to popular appliance operator
propaganda, the trend towards suface mount construction does
NOT preclude fix it yourself, it just means you have to learn some
new techniques ... and it doesn't take thousands of dollars worth
of specialized equipment either ...

In fact, if hams were more technically competent, they might
actually BUILD more of their own gear ... either from scratch
or from kits (a resurgence of kits would certainly occur if there
were more people capable of building them).

> I really don't see what the problem is once you rationalize

Gary was, I am quite certain, talking about "how things *should* be"
(as opposed to how they *are*)

That ham radio has become an appliance operating hobby rather than
a technical pursuit to the degree that it has is a perversion ... it is not
what the service was established for, nor what will permit it to continue
to justify the allocated spectrum (both HF and VHF/UHF/+) and survive.

It is truly sad, sickening, and unfortunate that what you say is true ...
that is why Gary and I and many others are arguing for necessary
changes and modernization.

I knew a KID in Akron OH who failed his Tech test. Well, he already had an Alinco handheld. He cut the yellow wire! The one thats says Do not cut. He began to curse and hassel the local police. This went on for quite some time. One day while at a party drunk he was arrested. Well, he had his little radio with him. While in the back seat of the police car he decided to have some FUN. He began calling the officer all manner of names (none good!). Needless to say that got him busted! Stupid "YES!", dangerous "Maybe". Well, the best part is this! He passed his test and got his ticket anyway! go figure....73's

> the simplest, most basic, lowest power, highest S/N form of
> electronic communication available. Morse DOES do all the things
> you "anti-coders" claim it doesn't, and that is an undeniable FACT.

No, that's undeniable bullshit ... it is only barely marginally "simpler"
than FSK, which has at least a 6 dB advantage over OOK Morse in
weak signal performance (before you start ranting about needing
computers, etc. to decode FSK, it can be done by ear IF you're willing
to slow it down to the same rates that Morse is ususally sent at).

Please take your list of Morse Myths and put them were the sun
doesn's shine ... we're all damned sick of them ...

> Third: We're talking about the AMATEUR Radio Service. We're not
> competing with commercial communications systems at any level
> for any purpose. They are being used as a basis of comparison, but
> that comparison is intentionally self-serving and misleading.

No, we are faced withhavingto compete with commercial services for
the retention of our spectrum ... in terms of what is the "best and highest
use" in terms of public interest/public service value ... and we're failing
the test miserably because our technology has stagnated in the 1950s
or 1960s for the most part ... most hams are applianace operators who
use the radio spectrum for inane purposes like competitive games and
collecting "10-10 numbers" and similarly stupid pursuits ... that's NOT
why our bands were allocated to the Amateur Radio Service ...

> Ham
> radio is about learning and service, and is centered on gaining and

> exploiting the most basic, fundamental concepts in electronic
> communication, for one very important reason: to ensure that these
> skills are not lost in the mad rush toward higher "throughput."

That's absurd ... our purpose is to experiment, advance the state of
the art (or contribute to that advancement, rather than resisting and
impeding it as most hams do today), to grow and maintain a pool of
radio and electronics experts, and to provide public service communications
resources and operators in times of public need. Morse does NOTHING
to meet ANY of these goals ... it is backward, and is not wanted nor needed
by ANY goverment agency or emergency services organization.

> "Throughput" is fine, and to the extent that I'm also an advocate of
> the amateur digital modes, I'm all for it. But Morse code, and its
> testing requirements, exist for their own good, practical reasons.

Like what? Name one, please ... remember you said "good, practical
reasons" so no emotional, mythological bullshit, please ...

> The fact that this debate is ancient shows us that there is good reason
> for retaining the Morse requirement, and at present speed levels.
> Obviously, the regulatory bodies have agreed, through the entire
> history of the Amateur Radio Service, that Morse code proficiency is
> a valuable part of ham radio.

Actually the FCC wanted to blow off Morse years ago, but the ARRL
raised a stink and the FCC rolled over ... then the ARRL resisted the
FCC's idea for no-code tech ... this pissed off the FCC and contributed
greatly to the loss of a big chunk of our 220 band ... and probably other
losses since then ...

Spoken like a true technocrat.

Both of you are "right". Yes, there are more "efficient" modes in amateur
radio. However, they hardly exist in terms of the number of people using
them.

Well, it had to happen sooner or later. I mean the smart ass
remark about sniffing and so on. Why can't you rascals maintain
any kind of decorum with your commentaries. You tout technical
progress yet you argue with the mentality of gutter rats with
your crass insults and innuendo. You might make a little more
headway in you case for a no code ham system if you in fact
paid more attention to the tradition and less to half baked
arguments. All I've seen so far is glittering and less than glittering
generalities and snide cheap shots with very little substance.
Please! Tell all how the technical level of our hobby will
rise like the Phoenix when code is no longer part of the entry
mechanism. Give me three solid examples. Hell, give me at least one
that is not full of vague and apocryphal rankings. What I have
said about our technical testing is true and it needs more than
a little fixing. Both of us have made similar observations of the
sad state of affairs our ham operations are in--yet we seem to be
on different planets in our quest for the holy grail of radio
amateur salvation. I see a number of causal agents that are tearing
at the fabric of our hobby, you choose to take a singular and
purely emotional and often vengeful mission citing CW as
Satan incarnate without so much as a clue as to the rest of the problems
facing the hobby.

Ok fine. What would you do to fix it up? Come on now Carl. You
and your sidekicks are good at taking the cheap shots at anyone who
tries to have a civilized interchange, so how about dropping the
horseshoe facade of the almighty expert and tell us folks in the
wings how you guys want to rebuild (I guess re-engineer is the new
buzzword in the industry) the amateur radio service. We anxiously

wait your plan and just shooting the CW messenger is not good
enough. I want some tangible suggestions on how we can fix
the testing process that will ensure to a degree that our amateur radio
hobby/service will indeed serve the public's interest.

Well am I to assume from your comment that I am an incompetent
olde farte? My My. Getting a little emotional now are we. Old Fart
my fat ass. What have you contributed to the hobby as a whole in the
last two years. Have you published any articles that provided state
of the art information for your fellow hams to study and review? Have
you given any assistance, instruction or free equipment to a budding
amateur lately? Or have you accumulated enough test equipment to
set up a facility so you can fix your gear if it breaks? Or do
you just spend your every waking hour sitting in front of the PC
tapping out vitriolic dogma to entertain your droogs?

> "get the hell off of 'MY' frequency with that newfangled digital stuff"

That kind of interchange is as old as the hobby, spark v cw,
am v cw, am v ssb, ssb v am. and so on. Keeps us on our toes. Hell,
if these digital toys are so damn good they should whir right
through the cw guys with ease. Yup Yup!

I agree 10000 percent on this one. You can set up a first
class shop with nifty HP test gear and tektronics scopes and so on
for less than the price of a used HF rice box. No bloody excuse for
not taking care of your junk and learning how it works and if you

can get the parts off the board without roaching the board then go for it.
>
> In fact, if hams were more technically competent, they might

Again I agree 10000 percent. The prophets of doom say that hams can't get parts to build with. If ever there was a MYTH propagated, the no parts MYTH is it. Never in the history of the ham radio service hobby has so much good stuff been available and and microcents on the dollar. Unfortunately the so call experts intimidate a lot of the newcomers into thinking that it takes a Ph.D. to design and build complex equipment. Nothing could be further from the truth. All it takes is a good pile of old CQs, QSTs, 73,s Ham Radio mag, and so on to illustrate the accomplishments of our amateur radio service to give them the needed exposure and hopefully sink the metaphorical magic hook into their emotional centers. That is what I have not been able to put across in my prior postings. I am not proposing that we should cloak the hobby in mysticism, just invoke the magic that pulls us into the hobby be it technical or even Morse if it works for them. A simple concept that is difficult to explain when everyone is too busy ranting from their high altitude soap boxes.

> > I really don't see what the problem is once you rationalize

I did not say code testing is a useless hazing ritual. It is indeed a ritual and as I study this process in more detail I have come to believe it is an excellent ritual for all hams to partake in. If it were possible I would suggest that all hams, when they passed a specific level of code and technical testing, be taken to a quiet outdoor place, bon fires would be set, drums would pound, bamboo flutes would play, and each candidate would go through a real rite of passage ceremony where the license, in the form of some metal icon, would be presented to the initiate. And with this initiation the new ham would be lauded for his accomplishments in getting to his/her current level, but he/she would be admonished as to what would be expected in the future. Technical competence would be but one continuing quest with code as another skill to master and maintain.

Carl, I would like to think that you and your buddies are sincere in your concern for the welfare of the hobby/service. It would be even more convincing if somehow the debate could be tempered with enumerated suggestions or steps by which a no code system could be worked our, or perhaps some schema that would allow the continued use of code testing

in a form that will satisfy those who would feel cheated if their dues had been paid only to have the accomplishment denigrated by saying that their struggles were meaningless. The operational relevance of CW is not an issue nor is the efficiency of our current data systems anything to shout about either. When the crap hits the fans you will find that an adhocracy of mixed modes seems to form automatically and for reasons that are too difficult to explain in this venue, ham radio just works despite all of its archaic trappings..works well.

> 1. How many hams use Smith Charts?

Hi Bob, have you checked out my web page at:
http://www.geocities.com/CapeCanaveral/8476
If I remember right, there are 16 Smith charts there. How many copies of
MicroSmith have been sold? How many copies of ARRL Radio Designer have
been sold? A goodly number of the RF designers I know are hams.

> Me thinks that the time may be at hand where a good psychological screening
> would do more good to preserve the hobby than any kind of radio related exam.

Sounds good to me. Throw in an IQ test while you're at it.

> To force a tough Technical exam on all players is as Draconian as forcing All
> players to copy 20 wpm.

I don't think either Gary or I want that. I, for one, would like to see an
entry level exam that grammer school kids could pass and an intermediate
level for junior high and high school kids. The key would be that these
licenses would have enough priviledges to make the effort worthwhile.
Presently, the novice license is just not worth the effort. I learned everything
I know about radio and electronics after (and BECAUSE) I got my conditional license
(with general priviledges) 45 years ago. It opened up a lifetime of learning for
me in the field of electronics.

> Instead
> of a rote memory system of exams as the sole price of entry we should
> have the VECs set up scopes,...

Trouble is, a good percentage of VECs don't know how to use a scope.

> Have you been sniffing that solder flux solvent again or what???

Hi Carl, it's worse than that. Most old hams that I know and knew (SKs),
chewed on lead-based solder while they built gadgets. I'll bet if older
hams were tested for lead-poisoning, it would be shown to be rampant.

Here's one: Dr Williamson (PhD in EE) would be willing to train his considerable amazing talents (amazing to me, at least) upon the problems of HF amateur communications. As it is, if ham radio wants to view him as a reject from an asylum, he says the service can just GTH without him (obviously well under way).

Hardly, The age of Reason marked a time in European culture
when the Great Chain of Being was in full control. The Age of Reason
meant that there were no holes in the way everything went together.
The entire universe was seen as a set of objects put in place by
God,complete in every way. The term Reason only signified that there
was no room to deviated from the wonderful and "Full" universe. Which
any historian would consider the antithesis of modern scientific
reasoning. The priests and their dogma were essential factors during
the Age of Reason.

Gary, you are a bigger dunce that I first imagined. My gear
is so old that I have to dip and load. And to assure you that I
don't splatter all over I keep a close eye with a state of the art
spectrum analyzer. Why do you twits twist commentaries around and
shoot the messenger at every opportunity?

> >>

The Morse code symbol set is smaller than the ASCII or Baudot sets and
there is certainly less overhead in the protocol when compared to the
7 layer ISO model

We can argue Shannon et all for days on end, but to date I have not
seen
much in the way of HF data communications technology to make me want to
shiver all over. I worked on the Goldstone/JPL DSN systems some years
and aside from the physical size of the gear--nothing new other than
price reductions has come about in getting gallons of data in quart
jars

On the other had, I have seen a number of attempts to have machines
copy
imperfect hand sent Morse fail miserably, yet human operators did quite
well. Not Myth, not really important either other than to make the
point that the Bio-Computer is still pretty capable given appropriate
tasks.

SO WHAT! When I was proofing earth stations I used a lot of nifty
math and theories in my everyday work. Front end G/T calculations, Even
Kepler's
law of a swept area came into consideration in tracking systems. It was
neat to do
a path loss calculation for a 22,300 mile path and hit the number within
0.15 db
every time just using the math and the assumptions about the path,
measure uplink
powers and calculated ERPS and so on. Now a fellow can go down to
Electric City,
buy a DDS package and have it up and running in 30 minutes watching a
menu driven
help screen on the TV. Tis difficult to impress a new ham with amateur
technology
even at it most exotic when your neighbor can set up a bona fide earth
station
in less than an hour. We need the mysticism to at least trap em' into
the hobby.

> >If we are going to do something to help the amateur

And the FCC has said time and time again. Regulate yourself or else.
They cannot
and will not regulate us anymore. They say they do not have the money
and staff
and they are so busy riding herd on the cable TV industry crooks to have
any
time left for us. I restate a need to restore an atmosphere in which
the
entrants are looking for adventure and mystery rather than quick
gratification.
I keep hearing the argument that the "Very Technical Competent" cannot
waste their
"Valuable" time to learn the code and therefore must deprive the amateur
service of
their valuable contributions. If these folks cant muster up the 15
minutes a
night to get over the small pebble in the road the CW emulates, I really
don't
want the lazy jerks in my play pen. Call that anything you like. If a
fellow or
gal cannot invest a small amount of time to uphold a tiny bit of
tradition, then
they are not worthy of consideration. No one in this world is so
important that they
should be allowed special dispensation for no other reason than being
technically
inclined.

> > like yourself, I make my living in the electronics engineering

Having taken and passed every FCC written examination, commercial 1st
class telephone, Radar endorsements, commercial 2nd
class exam and the CW test more than 30 years ago when some questions
were still essay and you had to draw diagrams, the main study mechanism
was the Kaufman Q and A and yes I memorized hundreds of questions that
spoke to rules and regulations to pass the exams. I also had the
limited theory sections nailed prior to taking the tests so I could
deal with real questions with variations. But that was a long time
ago and as I have pleaded earlier, I am ready for someone to come
up with a theory testing system that is relevant today. Theory is Theory

and it does not change--just the applications evolve.
Again, if we could just express our concerns in a civil manner
and somehow deal with the less than perfect world we live in and perhaps
bow towards CW from time to time to recognize its past accomplishments
as well as its role in current amateur affairs rather than taking
broad brush strokes painting ALL pro code supporters as dead wood who
are dying out and who contribute nothing but obstacles to the
recruitment of new blood. Get proactive on both sides and sell the
code as a traditional trapping that can become a vestment with only
15 minutes practice a night. Tis true in nearly every case. Think
about it fellows.

I wanna see pirates who do such things get caught and lose any hope of
having a ham license forever. And I probably will see it happen too.

That IS why the HTX-242 was pulled off the market by R/S last week.

Well how can I contact Dr. Williamson to get his views on the subject.
Again, Cecil, your refernce to a presumabley nice fellow is again
an apocryphal statement lacking any foundation other than your
hearsay testimonial. Perhaps Dr. Williamson could get on the net
and speak for himself and perhaps enlighten us all with his observations
and how the code has prevented him from contributing to the amateur
radio service. The reject from an asylum is your metaphor and your
lopsided analysis, not mine.

What say we now, Cecil?

2575. NARCC problems (part deux)

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-10 00:00:00 UTC
From: Tom Sharples <sharples@hooked.net>
Message-ID: <33750DD4.129D@hooked.net>
Source record: 198780
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Here are some of the comments I got back to my prior posts about Narcc. First some background: A couple of weekends ago, a fellow repeater owner and friend, who had attended the recent Narcc meeting in Concord, sent me an e-mail to tell me that without any real discussion and with no prior warning, Narcc revoked the
sanctions for the 224.160 south bay repeater which I (WA6HAS) am 1/3 owner of:

"They simply stated that the coordination for the UUM and Zeppa repeaters
was to be revoked. It was put up for a vote of the membership, voted on and passed. The board seemed to have had their minds made up in advance."

However, the board failed give me or my associates KB6XN and N6UUM any advance warning whatsoever. Instead, they apparently made several statements at the meeting indicating that they were taking this action because they had problems with the content of the traffic on the repeater, including specifically the playback by some users of the repeater, of previously recorded death threats made by a mentally-disturbed local ham on another frequency (even though I failed to see how the owners can reasonably be held responsible for the behavior of their users). Two days later I received a letter signed by Don Smith, president of Narcc, ordering us off the air and threatening various legal and civil penalties, if we did not comply.

Before I write a formal response to Narcc, I made the posts several of you have seen over the week, because I wanted to see if other repeater owners were being subjected to this kind of high-handed, arbitrary,and tortuous action. Here are some of the responses. Since these were sent to me privately, I have deleted the names of the senders in most cases. Any sender who wishes to make his identity known is, of course, free to do so.

"Narcc has been a pain in the side of repeater operators for far to long.
There is another group now doing NARCC's job with better speed and accuracy. Check out Sharkk's web page at sharkk.com to see what's really
going on in Northern California."

"Contact your ARRL rep to let them know that NARCC should not be the only
coordinator they use exclusive as Narcc has failed us all for to long."

"This is insane! As you said, they are a frequency coordinating body only, not a morals police force....Please keep me posted on this. I've been involved with NARCC off and on for the past 25 years or more, (since Jay O'Brien started it.) I would even like to go out of my way to
attend the next meeting if you were to be there bringing this up."

"...At the last meeting where narcc president Don Smith w6nkf asked the membership to take away the sanctions off uum and xn... HE DID NOT FOLLOW THE NARCC BYLAWS or the policy and procedures of coordination. The trustees should have had a couple hearings at the very least. Don Smith has no legal right to ask any amateur or station to 'get off the air'."

"I think what they are doing is highly unconstitutional, denies everyone of a lot of their rights, and is also quite discrimitory, and since when did they become the fcc, especially without any prior warning?"

"It is well known, that through the years Narcc has assisted who they choose and ignored others... I have yet to find ONE individual who believes Narcc is doing an acceptable job of frequency coordination."

"Maybe we could sell tickets to the next narcc meeting/circus."

"...I have had problems with ... the 440 coordinator. He seems to be very quirky...(For lack of a better term.) I think he has a "God" complex."

and lastly:

"Tom,
Part of the problem has been repeater owners not wanting to voice their concerns publicly about NARCC. Why whine in private?. Send me what
you get. BTW, congrats on becoming SHARKK's 100'th member...

C'ya, Mike WU7Q/6 "

I'll be sending my official response to Don Smith in the next few days. Stay tuned! 73's Tom WA6HAS

2576. Newsline's bent to the LEFT

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-10 00:00:00 UTC
From: "Jonathan (KE6YZZ)" <jd@caprica.com.no-spam>
Message-ID: <33755E40.6709@caprica.com.no-spam>
Source record: 198781
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc

To whom it may concern:

In recent weeks I have seen newsline going more in a liberally biased direction stereotypical of the news media.

Such was not the case until recently. Even if they had such inclinations, at least they kept them to themselves enough to actually APPEAR to be unbiased over the past few years that I've been listening to Newsline.

Now, they have not only changed, but I have notice that the more they beg for money, the more what they publish has a bent to the left.

Please note that I have never had an anti-Newsline sentiment until recently. In fact, the sysop of the W6TRW Amateur Radio Club BBS can verify that I even tried to get them to provide a phone line for Newsline when Newsline lost their number in area code 213 a couple of years ago because I thought Newsline was such a good and valuable service. I even suggested the same to folks at Newsline,(just in case they have yet to go back over their voicemail to see where they might know my name from). I still feel that if Newsline were to abandon incorperating their recently made-evident liberal bias into their stories that it still can be as valuable a service to the ham community I had ever esteemed it to be.

This week they have decided to publish an attack on militia people, even though militias are constitutionally protected organizations which are legal to discuss on Amatuer radio, both in nets and in normal QSO,(when all part 97 rules are obeyed), and even though a coordinated use of amateur radio for a militia event is no less legal than a coordinated use of amateur radio for the Los Angeles Marathon which has as little or less to do with radio as a militia, and yet events such as that have amateurs providing communications whenever possible without Newline reporters bashing them for it.

I feel the need to point out here and now that there are many law-abiding, licensed hams who either are members of legal militias or who endorse legal militias,(I know because I am one of the latter), and who don't keep how they feel about the matter a secret on the air. Apparently, liberals at newsline don't keep their anti-militia sentiments a secretr on the air either, but that's their exersize of their right of free speech, just as this is mine. I have to wonder if each of them would risk their lives for my right to say this, as I would risk mine to defend their constitutional rights.

I see NO legal reason why a law-abiding licensed amateur radio operator who is either a member of any law-abiding militia or para-military group, or who vocally endorses the latter as a sign of moral support and traditional patriotism should not be permitted to use any amateur frequencies and modes that they are licensed for, if they do so without violating anything in FCC Part 97 rules, which nowhere restricts licensed hams from the discussion of militia subject matter.

It is my personal guess that W6RCL was injecting his own anti-militia sentiments into his story,(in Newsline report #1030), perhaps hoping that someone might misinterpret this report from "a reputable news source" to be implying that it is somehow less than legal to even mention para-military subject matter on amateur radio, when in fact, such discussions of the subject are not illegal at all,(no matter WHO might wish they were). This reminds me of the anti-religion "thought police" out there who would love to see groups like the ACJ Net,(ACJ = Action for Christ Jesus), in Southern California be kicked off the air for daring to host a Christian devotional net each morning on 146.850 MHz,(obviously I also endorse the ACJ Net).

I would not have seen a need to write any of this had W6RCL seen fit to clearly distinguish between militia people and supporters who obey part 97 and those who don't, the latter of which are no better or worse than any other radio pirates,(both in my opinion as well as from legal perspective).

I think that Newsline needs to be reminded that sensationalism is most unbecoming to the ham community's reputation for reliability and accuracy in communications. When you suppress some of the facts and stretch or emphasize only select parts of a story in order to draw more attention, it is bad journalism, shows a lack of personal integrity, shows a lack of respect for the constitution and it is bad for ham radio.

In the past, I have seen Newsline as an award-worthy News service. I hope they will someday be able to return to that status in my perception. I do allow in my opinions, room for the people that my opinions are about to improve and am willing to update and alter my opinions as they change, be it for better or for worse. I also am willing to give credit where credit is due, otherwise I would not have mentioned that until recently I had a high esteem for Newsline. I really do hope they will improve, because it would be a hard thing for someone else to start a new such service to amateurs should Newsline continue to do such things and cause themselves a further loss of popularity and support.

Bottom line: If we wanted "junk-journalism", to coin a phrase, we could always go watch crap like Hard Copy or Oprah or Jeraldo Rivera or Strange Universe or tune in the radio broadcast versions of such garbage.

To the folks at Newsline I say this: The idea of good journalism is to stick to JUST THE FACTS and instead of being biased, to present an equal

representation of both sides of a story. As we all know... there ARE two sides to EVERY story... and this, gentleman, is a call for the return to balanced, unbiased reporting.

All of the above opinions are my own personal opinions and are solely intended to stimulate improvement, not to defame, slander or libel anyone at or associated with Newsline.

73 and God may bless you as you glorify Him.

It is my opinion, Masataka, that the only part of that disclaimer on
your webpage that is really needed are the first 5 words, "The author is
not responsible"... that says it all and the rest of that same paragraph
after that you can rest assured would be better off if deleted.

>UNIX guru to get working.

>Am I asking for too much?

Have you ever played with Unix or Linux ?

I'm rather new to HAM and packet radio and I have just bought my first set.
For 3 years I have run Linux now and it seems to me the ultimate OS for
packet radio (you have to discover this yourself, NO FLAMES).
I think Linux users/developers and radio amateurs both want to have the
POSSIBILITY to control and to know every little detail.

Unfortunaty using Linux is not common practice in packet radio land. Why ?
I don't know, maybee someone else can explain it to me.

But if you don't bother what's going on, run M$ products and call your
reseller if it's not working. However, I don't think you are a real radio
amateur in that case (perhaps my interpretation of radio amateur is wrong :)).

73,

Gerhard.

Hello All,
I am looking for anyone with a manual for the Uniden Bearcat BC-1200XLT.
It's a 100 channel/11 Band Scanner. If you have manual, or any info about
this fine toy please e-mail me at wildbill@carolinacommerce.com as I
rarely have access to newsgroups.
Thanks!

Try Linux Unleased by Sam's. It walks you thru almost everything. Makes
installation a snap. Comes with Slakware 3.0 on included CD. Lists at
$50. It's the best I've seen!

>Thanks,
>Darvell (N7LN)
>n7ln@qsl.net or dvhunt@es.com

>--

I eliminated a similar problem AND gained security all at the same time!

I installed my own garage door openers and they plug into a standard AC socket with a line cord. I inserted X-10 (Radio Shack sells them too) 15 amp appliance modules between the AC socket and the opener's line cords after programming the two modules (I have two openers) with the same code.

Then I put a couple of their cheap controllers in required places (like the operating position, the bedroom, the garage). Now, if I want to do something that will interfere with the openers, I simply turn off the AC power feed remotely with the X-10 controller.

If someone has to use an opener, they first turn them on with an X-10 controller. You can turn them off at night, while away at work, on vacation AND while you are operating. You can even put a UHF wireless remote in your car to disable/enable them from there too.

The X-10 modules and controllers are pretty cheap, and can solve quite a few problems of this nature.

Of course, if your wife wants in/out while you are talking, that could still be a problem. In that case, get her a cell phone and she can call you to tell you to shut up until she gets in the house!

I cannot attend the Hamvention this year so I have one room available for 3 nights, arriving Thur., May 15,
and leaving Sun., May 18. The room is non-smoking and has 2 double beds. The motel is renting the
rooms for the 3 nights (must take 3 nights I think). The rate is $80.00 per night charged by the motel. I am
not getting anything out of this but would like to make the room available to someone who might need it..
The motel is a 15 min. drive from Hara Arena. I must cancel by Mon., May 12, so let me know ASAP if you
are interested.

Email me at: sparkes@fast.net

http://marconi.mpce.mq.edu.au/wia/federal/wianews.html

DIVISIONAL NEWS

It was with deep regret that Council, on Friday evening, reluctantly accepted the resignation of past President Peter Jensen VK2AQJ. His expertise will be greatly missed.

David Thompson, VK2NH, the next in line in the ballot, was invited to join Council - an invitation he gladly accepted.

Also at the Council Meeting on Friday evening, the Councillors were allocated the following portfolios:-

Geoff McGrorey- Clark VK2EO - President, NTAC & QSL Bureau
Michael Corbin VK2YC - Vice President, Federal Councillor,
Deceased Estate Officer, Southern
Zone Representative
Brian Kelly VK2WBK - Vice President, Education, Northern Zone
Representative
Eric Fossey VK2EFY - Secretary, Membership, Bookshop
Eric van de Weyer VK2KUR - Treasurer, Security
Ken Westerman VK2AGW - Affiliated Clubs Officer, Western Zone
Representative
Owen Holmwood VK2AEJ - Dural Officer, Policy & Strategy.
Pat Leeper VK2JPA - Education, Trash & Treasure
David Thompson VK2NH - The new portfolio of Olympic Games and
Public Relations, VK2 Notes.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary

NEW MEMBERS.

A warm welcome is extended to the following new members approved at the Council Meeting on Friday night 09 May 1997.

Full Members:
VK2KQ James Patrick AYLING of Maroubra
VK2BSR Oscar LOPEZ of Miller
VK2ERQ Frank GLEASON of Cromer
VK2BFN Adrian CLOUT of Hazelbrook
VK2HBV Arthur MADDEN of Narrawallee

Associate Member:
David DOUGLASS of Salamander Bay

We hope you will have a long and happy association with the WIA.

--Eric Fossey VK2EFY, Divisional Secretary.

WICEN NEWS

A new event on the WICEN calendar is the Bushwalkers Wilderness Rescue Rogain, held over the weekend of 28-29th June, in the St Albans area. The contact for this quiet bushland exercise is Alan VK2YYJ, who can be reached on 015-097-217.

The Colo Classic Endurance Ride is on the weekend of 12th-13th July, Next weekend is the Hawkesbury Emergency Expo, run by Kevin VK2CKD, over the 16th-18th May. Assistance is required (as Kevin cannot possibly do it by himself) along with ideas for the display. This is an excellent opportunity to show the other emergency services just what WICEN can do and they cannot, such as portable packet radio, portable real-time video, etc.

Also next weekend is an Emergency Management course, held at the Volunteer Emergency Centre in Terrey Hills, for which Barry VK2AAB is the contact.

Next month sees the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG on the 7th June; we hope to have further information in a later broadcast.

and Blue Mountains WICEN has been asked to provide communications support. This horse endurance ride is a 24 hour event, starting at midnight on Friday 11th July, with an expected participation of 80 riders and their horses. We participated in this event last year, and it proved successful from both the organisers' and the operators' point of view. We need 13 operators to cover the checkpoints, with each checkpoint open for between 5 and 8 hours, and one operator with a 4WD vehicle would be appreciated. Why not make it a family weekend as there is an excellent camping area where the base station will be located next to the beautiful Colo River. A meal will be provided from the BBQ at the base when operators complete their checkpoint. For further information please contact Neil Fallshaw VK2XNF, at home on (047) 51-6449, at work on (02) 9342-1589, via packet radio as VK2XNF @ VK2TGB, or e-mail to

neil_fallshaw@yes.optus.com.au

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St

Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

INTERNATIONAL TELECOMMUNICATION DAY

The International Telecommunication Union, one of the United Nations agencies is 132 years old on Saturday, 17th of May 1997.

The I.T.U. was founded in Paris in 1865 as the International Telegraphic Convention, changed its name to ITU in 1947. It is the world regulator of international use of telegraph, telephone, radio and satellite communication services.

The NSW Division of the Wireless Institute of Australia celebrates ITU Day with an 24 hour special event station using the callsign AX2ITU on the usual HF DX frequencies both SSB and CW, 2 meters and 70 centimeters FM and on Packet.Activity is from 0001 local time till 2359 local time on Saturday the 17th of May 1997 as per decision of the Spectrum Management Agency. This local time translates into the following UTC day and time: 1401 hrs UTC on the 16th of May to 1359 UTC on the 17th of May 1997.

A standard size special QSL card will be sent in reply to those who make one contact and require a card. QSL Manager is VK2PS at callbook address - PO BOX 93 DURAL NSW 2158 AUSTRALIA.

When QSL-ing direct include a self addressed stamped reply envelope with your card.Overseas stations please send a self-addressed reply envelope with one IRC or one "green stamp" with your QSL card.
Alternatively QSL cards may he sent via the Bureau system to AX2ITU via VK2PS.

--Submitted by Stephen Pall VK2PS, Divisional Special Projects Officer

MAGAZINE ROUNDUP

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the May issues of the various magazines.

"Electronics Australia" continues the series on electronic warfare, and also encryption during the Second World War (which involved the first programmable computer in the world); the privacy of e-mail is discussed (perhaps your scribe was right after all?); whether those new "Pest Free" devices are really safe is debated (you've heard the adverts, now consider); an RMS current monitor is constructed; those with a nostalgic bent can

build a one-firebottle receiver; the series of projects for under $10 continues; the DDS-based HF to UHF signal generator is concluded; and a Tektronix Scope museum appears on the Web.

"Silicon Chip" builds a Teletext decoder for a PC (who will be the first to try it on ATV?); the hardware bloat for "Windows 95" is discussed; an NTSC-to-PAL converter is constructed; a lone example of where FM is superior to AM is presented; the series on digital oscilloscopes is continued; and signal tracing in the "olden days" is demonstrated.

"Amateur Radio" builds an inductance bridge for small coils; the FM-92 is converted to 6m; the L-match ATU finds another lease on life; whether the WIA is dying out is discussed; a simple power supply protector is published; and commercial cavities collect consideration. Listeners with Web access can access the contents of "AR" from the "unofficial" Federal page; the full path is:

http://marconi.mpce.mq.edu.au/wia/federal/armag.html

we don't know about other magazines.

"Radio and Communications" makes the most of CB; a poor man's Quad is constructed; once again, we are bemused as to why a radio magazine sees a need to discuss hand-guns; whether the GRN is really "up to it", especially with the Bushfire Brigade, is discussed; the KPC-3 is expanded; life on 50 MHz 50 years ago is continued; and a compact receiving antenna for 80m and 40m is constructed.

Be listening next month for another summary of the local magazines.

-- Dave VK2ZTB

ELECTRONIC EXHIBITIONS

A reminder that ATUG, the 14 th Australian Telecommunicitions and Data Networking Exhibition is being held this week at Darling Harbour from Tuesday through to Thursday.

In July - SMPTE 97 - covering the latest in radio and television broadcast and studio equipment will also be at Darling Harbour from the 1st to the 4th July.

STOLEN EQUIPMENT

Stolen from St Clair on Sunday, 27th April was an Icom dual band FM transceiver, model IC3200, serial number 36901268. Identifying mark is an Amateur licence number engraved on the base. If you are offered this radio for sale, or if you have any information, please advise St Marys police.

-- Trevor Cook VK2EC

DX NEWS

EASTER ISLAND - CE0/JA7KXD has been heard on 7004 kHz at 1000z.

ANGOLA - D2EB is active using SSB, often around 1100z, and 1730z to 1900z, on 21222 kHz, and later on 14240 Khz at 2215z.

NEW CALEDONIA - FK/F5PXQ is QRV from here for 3 to 4 years and hopes to be on RTTY.

WALES - Special Event Station GB100FI will be active from Flatholm Island, IOTA EU-124, from May 12 to 16. On May 13, GB100FI and

GB100LP will recreate Guglielmo Marconi's first ever radio transmission across water from Lavernock Point to Flatholm island.

SAUDI ARABIA - 7Z5OO is active from Riyadh, and can be found on 6 meters. He expects to be here until the end of July.

BANGLADESH - S21YE is currently active using SSB. His length of stay is unknown. S21/PA3BTQ is also active from here using SSB and Pactor on 20 meters.

SAO TOME - S92SS and S92YL, are QRT from here. After some time spent in the US, they both will move to Kavala, Greece.

MARSHALL ISLANDS - N2PC will be here for the next 4 to 5 years and will be QRV as V73AT on all bands.

MONTSERRAT - VP2MGG is now active from here operating mainly SSB but will try CW from time to time.

--ARRL DX Bulletin number 21, dated 8th May

MILLS ON THE AIR

No, this news item is not about the ubiquitous Tim Mills VK2ZTM... Today, over ninety special event stations will be activated from both water and wind mills in the U.K. and Ireland.

The following EI mills should be on the air for the day:-
EI2WRM will be operated by members of the Dundalk Amateur Radio Society from The White Rose Mill in Dunleer, County Louth;
The Blennerville Windmill in Tralee, County Kerry will be on with the callsign EI2BWM.

EI2EWM will be activated by the Midland Radio Society from The Mills in Elphin, County Roscommon;

EI2LDM will be operated by members of the Kells Radio Club from Locks Distillery Museum in Kilbeggan, County Westmeath.

At the time of writing, the callsign for the The Corn Mills near Letterkenny in Donegal has not been confirmed. Look out for it on the day.

To qualify for the associated award, you need to work ten of the special event stations which should not be too difficult with the large number taking part.

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton. Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night
all checkins are welcome.

Upgrade your morse. Classes on Thursday nights.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events
31st of May. Lecture on Microwaves and Plumbing By Dave VK2GIO.

--The Publicity officer Michael VK2E

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday 21st May, being the 3rd Wednesday of the month. Jim Ayling, VK2KQ, will tell us about his experiences in developing portable gear for a recent WICEN exercise. It is also the Society's AGM. Doors open at 7:00 pm and the meeting starts at 7:30.

The first Saturday afternoon of each month is project day, so drop in on June 7th from 1:30 onwards and get involved in some practical work or just come along and socialise. Project day has proved most useful to a number of members by helping them fix rigs with faults or just to receive assistance in the operation of modern rigs.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before the meeting.

--Simon Buxton, VK2EII, Club President

WESTLAKES AMATEUR RADIO CLUB

WESTLAKES AMATEUR RADIO CLUB ADVISES THAT IT WILL HOLD A '24 HOUR 160 METRE MARATHON' ON 17 MAY TO CELEBRATE ITU DAY. THE CLUB STATION WILL USE BOTH ITS CALL SIGNS, VK2ZL AND VK2ATZ AND WILL BE ACTIVE ON SSB AND CW.

TWO SPECIAL QSL CARDS ARE ON OFFER TO ALL STATIONS WHICH MAKE CONTACT. ONE CARD IS FOR SSB, THE OTHER FOR CW, AND WHEN PLACED TOGETHER, THEY MAKE A NICE SET. THE CARDS ARE ALSO AVAILABLE TO SHORT-WAVE LISTENERS WHO SEND SIGNAL REPORTS TO THE WESTLAKES CLUB AT POST OFFICE BOX 1 TERALBA 2284.

THE FREQUENCY ON WHICH TO LISTEN IS 1822 kHz PLUS OR MINUS FOR QRM AND EITHER VK2ZL OR VK2ATZ WILL CALL ON THE HOUR, FOR 24 HOURS.

THE DATE AGAIN FOR THE WESTLAKES '24 - HOUR 160 METRE MARATHON' IS ITU DAY, 17 MAY STARTING AT 0000 UTC.

--That item was submitted by Greg VK2CW

GLADESVILLE NEWS.

The May monthly meeting of the Gladesville Amateur Radio Club will be held on Monday evening the 12 th at the usual Lane Cove venue. The Newsletter is being prepared this weekend and will be in the post early in the week.

The May Club newsletter was posted during this past week.

The test transmissions from VK2TVG carries a page of Teletext which can be accessed on default page 100. If you have a reasonable signal from any of the transmission sources - 444, 576 or 1250 MHz - you should be able to display the page. Reception reports are welcome, either during a transmission or on telephone (02) 9427 0530 [repeat]. The Teletext page

again is 100.

--73 Keith VK2ZZO President / TV Co-ordinator.

OXLEY REGION FIELD DAY

This annual event will be held again on the June long weekend at Port Macquarie. Most activity will be on Sunday the 8th.

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

The April meeting of the club where Snow VK2IFS & Kevin VK2TKB spoke on different packet operating programs was well received by the members and visitors including a group from the Blue Mountains Club.

The next meeting of the club will be held on Wednesday week the 14th of May, at the usual location, the Scout camp on Cambridge Ave Glenfield. The lecture will be a practical demonstration on designing a printed circuit board from a distributed circuit diagram using Easy Tracks. The lecture will he given by Brian VK2TRS and is a follow up from the Protel lecture he gave last year.

The Club advises that our 146.625 Mhz repeater is temporarily off air due to an enforced change of location. The proposed new location will hopefully be free of the pager intermods. which plauged us at the Mt Razorback site. As soon as the repeater has been reinstalled we shall advise all amateurs via this broadcast.

-Submitted for the Liverpool & District Amateur Radio Club by Garry VK2TSR

BLUE MOUNTAINS AMATEUR RADIO CLUB INC.

The Blue Mountains Amateur Radio Club INC had its annual general meeting on the second of May 1997 and a new committee was elected.

President Adrian VK2-BFN
Vice President Dave VK2-IH
Secretary Guy VK2-BBF
Treasurer Mike VK2-KVC
Repeater co-ordinator Dave VK2-DPA
Education co-ordinator Neil VK2-XNF
Ragchew editor Kevin VK2-MNU

Plus three executive committee positions.

Alex VK2-ICL
Phil VK2-GPB
Neil VK2-XNF

This is a very enthusiastic team so 1997/98 will be an exciting year for the Blue Mountains.

The club meets first friday every month at Springwood High School cnr Chapman pde and Grose rd Faulconbridge.

Next month is the Trash and Treasure. Remember your trash in somebody else's treasure.

Also dont forget our 2M fox hunts second Friday every month starting at the high school. Frequency in 146.550 and visitors are welcome AND, will be given 10 minutes start over the locals.

--Submitted by Adrian VK2-BFM.

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. lnc WILL BE HELD SPECIAL ON THE 3RD SUNDAY OF THE MONTH, THAT IS MAY THE 18TH. AT 109 WIGRAM ST. PARRAMATTA 1.00 PM - NEXT WEEK

- A TECHNICAL DISCUSSION WILL BE ANNOUNCED NEXT WEEK

- NOTICE TO ALL MEMBERS, TO THOSE WHO MISSED OUT ON THE AATC CLUB DISC AND THE SPECIAL DISC, SOME WILL BE AVAILABLE FOR THIS MEETING AS WELL, BRING YOUR DOLLAR WITH YOU.

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE INTERESTED IN AMATEUR OR SATELLITE TELEVISION.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

On Friday 17 May the club will be running a Demonstration on Packet Radio for the students of the High School. Members please note that the Packet will be off the air during the day.

Also every Third Tuesday of the Month from 7.30 pm, at the Campbelltown

High School, is the General Meeting night with lectures on popular subjects.

The proposed lecture agenda Is:

May: Introduction of the Club's Web Page and a discussion on Amateur Position Reporting System (APRS)
June: The Mobile Phone Network
July: High Speed Packet
August: Practical use of a Spectrum Analyser
Sept: Fox Hunt Information Night
October: Home Brew Competition
Nov.: President Daryl's Slide Night on his USA Trip.
Dec.: Christmas party
Jan.: 2 Metre Fox Hunt

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION.

The Annual General Meeting was held fast Sunday May 4th at 11:00, and the Committee for 1997-1998 was elected.

After the various reports were read, and accepted, general business took place, where technical improvements to the network were discussed. The meeting closed approximately 1:30pm and an excellent sausage sizzle, was enjoyed by all present.

At the Committee Meeting on the evening of Thursday 8th May the members of the committee were elected to the following positions.

President. David. VK2KLX.
Vice President. Barry. VK2AAB.
Treasurer. Pat. VK2DPH.
Secretary. Jo. VK2KAA.

Committee

lan. VK2MW. Assistant Treasurer.
Geoff. VK2BQ. Assistant Secretary.
Gerrard. VK2DAA. Technical Adviser.
Jim. VK2XTN. Technical Adviser.
John. VK2AUQ. Editor, Membership Register.
John. VK2WRT. Publicity Officer.

VHF DX GROUP

THE- VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE ON THE TUESDAY 20 MAY AT AMATEUR RADIO HOUSE, PARRAMATTA.

THE MEETING WILL BE A SPECIAL LECTURE BY GARRY VK2KYP ON MODIFYING THE AM-17 TRANSMITTER FOR USE ON TWO METRES. THE AM- 17 IS AN EX-DCA HIGH BAND VHF TRANSMITTER USING A PAIR OF 4CX250Bs AND PROVIDES A SIMPLE WAY OF GETTING TO THE MAGIC 400W PEP ON 144MHz. QUITE A NUMBER OF AM-17s ARE ON THE AIR IN SYDNEY, CANBERRA, MELBOURNE AND BRISBANE.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550MHZ FM AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2AR

THE NEWCASTLE SCANNER AND SHORTWAVE GROUP (NSG) INCORPORATED WOULD LIKE TO ADVISE THAT IT'S INTERNET HOME PAGE HAS MOVED, AND NOW CONTAINS ADDITIONAL ITEMS OF INTEREST TO SCANNER AND SHORTWAVE LISTENERS, AND AMATEURS.

THE NEW URL IS http://www.swi.net/nsg

NOW ACTIVE ON THE HOME PAGE IS A TRADING POST FOR THE LISTING OF SCANNER, SHORTWAVE AND AMATEUR EQUIPMENT WANTED OR FOR SALE, AND A STOLEN EQUIPMENT REGISTER TO ALLOW LISTING OF STOLEN OR LOST RADIO EQUIPMENT. LISTINGS ON BOTH OF THESE ARE FREE.

NSG CATERS FOR SCANNER ENTHUSIASTS IN THE NEWCASTLE AND HUNTER VALLEY REGION OF NSW, AND SHORTWAVE LISTENERS WORLDWIDE. WE CAN BE CONTACTED BY E-MAIL nsg@swl.net BY FAX (049) 907751, OR BY MAIL TO P.O. BOX 728, CHARLESTOWN NSW 2290.

HORNSBY & DISTRICT ARC. INC.

The next meeting of the Club takes place on Tuesday 13th May at 8:00 pm. in the Mount Colah Community Center, Pierre Close, Mount Colah. Visitors are most welcome. (This is a get-together and general chit-chat meeting.)

The Hornsby & District Amateur Radio Club Inc. Would like to remind its members, that the Club is holding a social outing in the form of a picnic at Fagan Park, on the 18th May, arriving early as this is a very popular spot,

VK2WRT intends being there at 9:00am. Enter via the Carrs Road entrance, bring your own food and drinks, and addmission to the Park is $2. This is a social gathering. Visitors are always most welcome, come and meet us, in a relaxed atmosphere.

Training Classes.

The training classes are closed, as at this stage the class is too far advanced, for new starters to catch up. So if you would like more information on classes in the future, please ring Tony VK2BTL on 9487 3383 or John VK2WRT on 9807 2490.

The Club conducts, a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feet tree to join in. All are welcome. Listeners set your scanner or receiver to 147.250.

Should you wish to know more about the Club, or its activities, please write to H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

If the better connectivity occurs only during clear nights, I would
suggest the opposite explanation.

If the sky is clear all the time and the air is dry, the ground is
heated during the day but after sunset the ground cools rapidly, since
there is not enough humidity to trap the thermal radiation. When the
ground cools, so will the air immediately above (in contact with) the
ground, while the air temperature higher up is more constant. This
radiation inversion becomes stronger during the night giving long
contacts early in the morning. Even if there are no real radiation
inversion each night, the cooling of the ground will alter the
effective earth radius and thus the signal can propagate more in free
space. During the day, when the effective earth radius is smaller,
much more obstacles are within the Fresnel zones attenuating the
signal.

The _average_ earth radius at VHF/UHF is about 4/3 times the real
earth radius, thus, the radio horizon is 15 % further away than the

optical horizon. This varies from places to places and also depends of the time of day. If the link is marginal, this could explain the behavior.

Does anyone know of a good newsgroup about radio scanners?

If the sender used a forged return address, you may be able to
figure out his identity by viewing the full headers of the mail.
In most cases it is very difficult to forge these. -Justin

Hi, Gary.

I have to agree with the other fellow on this one! Read what he said
again.

> >Second: Morse code has much more than "entertainment value"
> >for personal use. It has unmistakably advantageous attributes as

Now, granted, I have never experimented with the other modes which are
touted as much more efficient than Morse code, but on the ham bands most
folks operate SSB, CW, and FM. I've been a ham for 35 years, and from my
own experience, Morse code is superior in getting through the QRM. I'm
not at all interested in how much data I can transmit in any given time,
as most of the time I'm on the air for the pleasure of it.

Best regards,
Lindsay

>donna wanna to be caught. please help !!!!!

The first thing you need to do is determine the frequency they are using.
If they're using an 800Mhz trunked system, finding transmitting equipment
is going to be rather difficult.

On the other hand, if they're using standard VHF-Hi or UHF frequencies,
equipment is readilly available. RELM programmable radios seem to be
everywhere these days :-)

Don't waste your time. Ham radio will soon be a memory. The VHF and UHF frequencies are in the process of being taken away and given to commercial interests. Of course, the 18th century Morse requirement will still be mandated by the ARRL, assuring no new blood will surface here. When the current geriatric residents of HF get the silent key, the hobby will go with them.

Good point, Mark! I was never much of an electronics "wiz" when I was younger (and still not proficient!) but I wanted to upgrade in the worse way so I studyed hard and passed the Advanced written which IS a bear! I would have LOVED to bypass that written and just take a 20 wpm code test to get Extra, but hey, it was a requirement. Even as Mark said it will all be OBSOLETE theory in a few years anyway, but it was a REQUIREMENT. Hmmmmm, obsolete, have I heard that word before somewhere?

I guess I should have jumped on the Newgroups (even though they didn't exist then) and started whining about it so hopefully the theory part would get dropped someday. Who wants all those "eggheads" in the hobby anyway? (notice the tongue-in-cheek, fellows)

I can see the subject line now.

Check out the new website on the net! N9SBV's Ham Radio Connection at Http://members.tripod.com/~n9sbv/Status.htm

This new system is oriented toward helping the new ham radio operator with resources he or she may need to get the most out of their hobby.

Lots of shareware available for download from the FTP Site. With 2 of the NEC 7 disk Changers online for starters, there is over 15 Gig online of all types of shareware software.

The WebServer is focused on Amateur Radio Related Areas. Homebrewing, Weather, RACES, FCC Rules and Regs, general Ham Radio Aids, and the like. And if you would like to put up a home page at the site....well I may even be able to accomadate a few users for that purpose. The site will be maintaining a Ham Radio focus however.

This site is located in South Bend, Indiana. It's my hope that it will become a major link for Operators in the Michiana Area to keep in touch locally and worldwide.

See you on the site!

73 de N9SBV

Again you appear confused. What you are talking about is the Platonic
Ideal which dominated Eurpoean thought in the Dark Ages. It based its
view of the universe on abstract ideas of perfection ordained by supernatural
influence, IE the requirement for epicycles was a result of this Platonic
belief that Heaven could only contain perfect circles. What Galileo, Kepler,
Newton, Kelvin, Bacon, Burke, Franklin, etc ushered in was the Age of Reason
which believed the universe was knowable by Man based on rational
natural laws derived from observation and experiment. The Newtonian
universe was believed to be a clockwork which could be fully understood
given enough information about the state of the universe at a given time.
It contained no room for animism or mysticism. (We know now that the
universe is a bit more complicated than a clockwork, but we still maintain
the Age of Reason idea that the universe is ultimately knowable by Man.
There are no mysteries which "Man was not meant to know", though lately

quantum mechanics has introduced a little uncertainty into that. And we
still follow the Age of Reason concept that natural law can be deduced
from observation and experiment.)

You listed a set of operating practices, which if followed would result in
improper operation. You listed those as if they were *acceptable* practices
for amateurs to use. When I suggest that operating that way makes you a
menace, you roll out the claim that you use a spectrum analyzer to assure
technical compliance. Which is it? Are the technical exams just a "rite of
passage" to be ignored, and are the operating practices you listed acceptable,
or does theory actually matter, and should amateurs practice good engineering
methods in accordance with it? You can't have it both ways.

> The Morse code symbol set is smaller than the ASCII or Baudot sets and
> there is certainly less overhead in the protocol when compared to the
> 7 layer ISO model

There is no formal protocol for Morse operation. Morse is a variable length code,
formed with five irregular symbols. That is a major problem with it since a matched
filter can't be formed for the channel. And because there is no protocol, there is
no formal mechanism for error checking or error correction. It actually has a *negative*
coding gain.

> We can argue Shannon et all for days on end, but to date I have not seen

> shiver all over. I worked on the Goldstone/JPL DSN systems some years
> and aside from the physical size of the gear--nothing new other than
> price reductions has come about in getting gallons of data in quart jars

Apparently you weren't paying attention. The use of uniform codes allowed a matched
filter for the channel, and use of Reed-Solomon codes, Golay codes, etc allowed a coding
gain which permitted signals uncopyable by ear to be received. If Morse code would have
sufficed to maintain contact with Pioneer, Voyager, Galileo, etc, then why weren't banks
of headphone wearing Morse operators used? The data rates from those probes is quite
low, almost in the range of an exceptional Morse operator, so if the systems developed
weren't superior, why were they used?

The same principles applied by the DSN can also be applied to amateur HF operation. In fact they are to one degree or another with the modern digital methods we use. Even lowly RTTY uses uniform symbols so that a matched filter can be formed. Combined with the use of FSK instead of OOK, even RTTY has a 9 to 11 db advantage over OOK Morse sent at the same data rate (there's a 2.92 db performance variance with OOK Morse depending on the particular order of symbols being sent at a particular moment). Other techniques, such as Clover and PACTOR II, yield even greater advantages thanks to good signal design and the use of strong FEC to derive a coding gain.

The *only* reason OOK Morse operation has any claim to fame as a weak signal mode (or one that works against strong interference), is because the data rate typically used is *extremely* low, about 8 bps for 20 WPM operation. If any of the more modern methods are slowed to that rate, their performance is spectacularly better. The gain from slowing the symbol rate is proportional to 10*log(sqrt(S2/S1)) where S2 is the higher symbol rate and S1 is the lower rate, and the symbols are uniform. And that advantage doesn't include coding gain from FEC.

I'm running a PSK system on HF now which operates at a *maximum* power of 10 mW on links between here and Indy and here and Denver. The data rate is adaptive. At 10 bps (faster than a typical Morse contact), it works when the signal can't even be heard by ear. And I can slow it even more when the band is particularly sour. At 1/10th baud, it is 10 db better than at 10 bps, at 1/100th baud it is 15 db better than at 10 bps. Morse operators gain no benefit from dropping below about 2 bps (they can't integrate the symbols in their minds at lower speeds, this was proven in a graduate thesis recently published by the University of Stockholm). And they still face the 9 to 11 db deficit by running an irregular quintenary code with OOK modulation.

So it isn't just a matter of squeezing gallons of data into a quart jar, though you can do that too if you run the power up into the audible detection range, use symbol overloading, or some coding tricks. Clover does that, and can deliver 750 bps when a Morse operator can only do 8 bps. I'd consider that impressive. Of course adding Clover capability adds about $400 to the cost of a SSB system, so it may not be attractive to some (though it is cheaper than a linear for an even better performance improvement). But my little PSK system cost less than many amateurs' QRP CW stations (about $150 total), and it still can regularly beat OOK Morse thanks to a better signal design and coding choice.

> On the other had, I have seen a number of attempts to have machines copy
> imperfect hand sent Morse fail miserably, yet human operators did quite
> well. Not Myth, not really important either other than to make the
> point that the Bio-Computer is still pretty capable given appropriate
> tasks.

Much of the advantage of modern technique lies in the use of a uniform code and consistent timing. Hand sent Morse fails badly on both counts. Therefore it is not as amenable to machine techniques. Humans evolved to pick patterns out of complex jumbles, IE to detect the stealthy approach of a predator in a noisy jungle, or to pick objects out of the complex visual field. Thus we come hard wired as pattern matching biological machines. We haven't yet done a lot of work on developing the same sort of hard wired capability in machines. Nature had millions of years, we've only been working on the problem for a few decades. For communications purposes, we can sidestep the issue by using a uniform code, and *that* allows machines to perform much better than humans.

>> The tools with which theory equips us are something we
>> can apply today, tomorrow, and every day after that.
>>
> SO WHAT!

So what? Understanding how things work is at the heart of amateur
radio. It is the essential difference between an amateur and a CBer.
They're just *users* of technology. We're supposed to be masters
of technology. That requires us to understand how our systems work,
and that requires a firm grasp of theory.

>When I was proofing earth stations I used a lot of nifty

I don't believe that. If we use mysticism as a lure, we'll get mystics, and
that's not what we want. We're supposed to be developing skilled technicians
and electronic experts according to 97.1, and we don't do that with mysticism
or mystics. We need hard headed pragmatic people interested in how things
work. We do not want *users* who mutter incantations by rote over black boxes
that they don't understand. That's what you get when you drag in mysticism
and magic. We want people who firmly believe that the world is amenable
to rational analysis, who firmly believe that there are immutable natural laws
which can be learned, understood, and applied.

[restoring a snip to regain context]

I said that testing cannot select for behavior. At best it can eliminate the excuse "I didn't know" from the vocabulary of the violator. Only strong enforcement can maintain an acceptable level of behavior.

>And the FCC has said time and time again. Regulate yourself or else.
>They cannot
>and will not regulate us anymore. They say they do not have the money
>and staff
>and they are so busy riding herd on the cable TV industry crooks to have
>any
>time left for us. I restate a need to restore an atmosphere in which
>the
>entrants are looking for adventure and mystery rather than quick
>gratification.

It is true that the FCC has largely abandoned the task assigned to it by law. That's unfortunate (and probably constitutes malfeasance). This is at heart a political issue, and has to be addressed politically, IE if the Executive refuses to carry out its legal obligations, it is time to replace the Executive. But our numbers are small and our political clout is scant (and we know why that is don't we?), so we have little chance of doing that at present.

But the last thing we want is to fill our bands with ignorant adventurers and mystics who haven't a clue about the technical nature of the service. They will, of course, operate in such a manner as to cause harm because they don't understand what they are doing. And the adventurer is by nature a lawless sort, and the mystic only respects a "higher power", so both will be scofflaws in the face of the regulations. This is absolutely the *worst* thing we could do.

What we want is people who will take a rational approach to the service, and who will take pride in doing things the best way they possibly can. That requires an understanding and interest in how things really work, not a bunch of mystic hogwash myths.

We can use the power of peer pressure to maintain a semblence of order if the peers are rational and take pride in the excellence of their own operations. But if the peers are a bunch of mystic seers and pseudoscience gabbling incompetents, they won't have the moral standing to achieve results with peer pressure. No one respects the incompetent.

>I keep hearing the argument that the "Very Technical Competent" cannot

>should be allowed special dispensation for no other reason than being
>technically
>inclined.

That sort of attitude of worship of ritual and blind obedience to tradition marks the thinking of the Dark Ages. One of the best attributes of Man is his ability to ask "Why?". And we have yet to receive a satisfactory answer to that question in regard to Morse testing. The "effort" argument is at base a religious one, and has no place in secular government licensing. It is approrpiate to demand a rational secular reason for a licensing requirement. When law is illegitimate, it is the duty of Man to protest. That's how we got to be an independent nation, and how reform has been carried out down through the ages.

Now if Morse testing were based on a legitimate rational secular reason, I wouldn't care how hard it was to pass. Legitimate requirements simply have to be met, whatever the cost. But it *is* the legitimacy of the requirement which is in question. Now for some, meeting the requirement is fairly trivial, for others it is a great struggle. If the requirement
were legitimate, that wouldn't matter. But since it is, IMHO, illegitimate, and just an arbitrary
hurdle, the effect it has on entry to the service has pragmatic consequences which must be examined. And pragmatically, we find many who balk at this arbitrary requirement who are otherwise well qualified to participate in the amateur service. I for one respect them for that. It would be easy to just bow down to arbitrary tradition and do it, but it takes a
bit of character to say "no, this is wrong" and refuse to submit.

>> While I don't have a problem with a "meters and soldering iron" sort of examination,

[again restoring context which was snipped]
As I noted, written exams can be structured so as to be "practical". I gave the example of our state HVAC exam. For a room full of applicants, meters and soldering iron exams are impractical to administer. We can accomplish the same thing, however, with well structured written exams.

[in response to fears about rote memorization]

>and it does not change--just the applications evolve.

Indeed, theory is theory, and it is just as relevant today as it was 30 years ago. The implementations change, but the principles on which they work don't. If you understand the principles, it doesn't matter how the applications change, you'll still be equipped to deal with them. For an exam to be "practical" it must measure if you can apply those principles rationally to the case at hand. Thus the use of the "word problems" I mentioned in the part you snipped. That tests critical thinking, and that's what we want our applicant to be able to do.

We aren't interested in determining if he has idiot savant skills of memorization. In that context, I have long advocated that the exam allow use of the relevant working references an amateur would be expected to use in solving real world problems. I'd allow a copy of Part 97 so the applicant could demonstrate he knows how to determine the legality of an operation. And I'd allow standard electronic reference works for dealing with the theory sections of the exam. I would not allow a Q&A manual, however, because that wouldn't be a relevant test of critical thinking if one were merely required to look up the question and note the answer.

On the state electrical contractor exam, we were allowed to have a copy of the NEC, just as we would in the field. Similarly, on the HVAC exam we were allowed to have a standard reference handbook with steam tables, vapor pressure tables, etc. In other words, they were real world practical tests of whether we knew how to solve the sorts of problems we would face in the real world, using the real world references we would use in the field. I think we can structure the same sort of exams for amateur radio operators.

Even if it is, we shouldn't worry too much about it. While high blood lead levels aren't healthy, they don't have too great an effect on the mental faculties of adults. The concern is in young developing children, where high blood lead levels correlate strongly with reduced mental function. That's probably because the brain is still developing, and is more vulnerable.

I am thinking of bringing along my trusty 40m QRP rig to my next
vacation to Greece. I have heard that the US 40m band plan does not
quite apply to other parts of the world. Anybody know the 40m band plan
in Europe / Middle East?

My Oak Hills Explorer II can cover any 75KHz chunk of the 40m band
I choose, but this an internal adjustment I would rather do before I go.

thanks

Costas

Well there are some who will disagree with you. To carry you thought
to the ultimate choice - -

How about murder - because you choose not to agree with someone's
political thoughts.

How about armed robbery from a bank - because you choose not to work
for the money?

How about operating your ham rig outside of the bands - because you
choose to operate in an area with less QRM?

How about ignoring the FCC rules with reference to language on the air
- because you don't wish to conform to the law? After all the FCC
won't do anything about it.

And one more - if you choose stupidity - you are indeed allowed to do
that. For here I agree with you - that is indeed your choice to make.

Thank you, I wear that designation with pride.

>Both of you are "right". Yes, there are more "efficient" modes in amateur
>radio. However, they hardly exist in terms of the number of people using
>them.

Indeed, only a few thousand amateurs use the really advanced modes, though
about 22% use some digital mode better than OOK Morse. Yet you don't seem
to see that as a symptom of the problems of amateur radio.

While I object to Morse testing on moral and political grounds, because of its
illegitimacy as a secular requirement, the major reason I am concerned is
because of the effect it has on the amateur perception of communcations
technology. Because of the Morse Myths fostered by the current system,
many amateurs are in denial that there even exist methods better than Morse
for amateur communications. And even if they grant such methods do exist,
they raise spurious objections to their use.

That's very unhealthy for the future of the service, particularly in this era
where we cannot take for granted continued access to spectrum. If the
government were to apply a zero based budgeting approach to spectrum
allocation, it would be dubious that amateur radio would even exist. We
haven't been paying our way in terms of our charter goals for quite some
time now. And a lot of that can be laid at the door of a system which
asserts that the highest aspiration of an amateur is the passage of faster
and faster Morse tests.

Very good, Paul. That's a more likely mechanism than the one I suggested
for most terrain. I've experienced the trapping effect I spoke of on a regular
basis in some situations, however. We had a microwave link which crossed
an expressway. Every day the layer height changed due to the presence of
traffic, and shifted one end of the link into the duct. Took us a while to figure
out why we had these clockwork fades when we had optical line of sight
between the sites.

Sounds like he is in it for the real bucks, the commerical users !!!!! I can't blame him. If I had a location that was desirable to the cellular/paging/pcs industry such as his, I would be at town hall looking to replace my 70ft'er with a 300ft'er !!!!!!!!

As someone else mentioned here, there is another tower in the area that was approved recently, and good luck to the first one to construct. Let's just look at the mathematics here !

200ft tower = 20++ clients @ $500/mo (+ 5% CPI index increase each year of lease renewal)

= $10,000 monthly income
= $120,000 yearly income
- $ 10,000 misc costs per year (elect,taxes (property), minimal maint)
= $100,000 ++ income just for sitting home !!!!!!
I wish him luck and envy him .....

They're just among some in ham radio that hide behind the
microphone/key/tnc because they have problems (feel uncomfortable)
relating to people in direct one on one conversations, they have
social problems and it's much easier to turn off the rig or change
frequencies rather than being face to face with someone if a difficult
or embarrassing situation comes up. I used to see the same stereotype
at some of the early computer shows, but since computers have become
more *mainstream* there's not nearly such an overabundance of them
anymore. I basically feel sorry for some of them , but what the heck
at least they're communicating via the radio if not much of anywhere
else.

>test at 20 wpm on a good day if luck was with me

Wait a minute... Did you state before that you used to be able to
"copy 20wpm in my head"? That sounds like a far cry from being able
to passing the current multiple-guess test today (which really only
requires a 15wpm-17wpm copy speed).

>The point is that no special dispensation should be necessary ...

Right. You should just do the requirements as they exist and stop
complaining about it.

>we should simply change the rules to make them relevant to today's
>technology, the needs of society,

Yup, and since CW is the second most used mode on HF today, surpassed
only by SSB, a CW test continues to remain relevant to the hobby.

Sort of like you going out of your way to insult Carl and get the mud slinging started again. Left to his own devices Carl's posts are usually fairly well reasoned and quite the oposite of yours, perhaps this is the reason for your seeming personal dislike for him. To my mind Carl's greatest weakness is letting YOUR personal insults get under his skin. As you say "some things will never change".

The Morse testing, and the attitude it engenders that the highest aspiration
of an amateur is to pass faster and faster Morse exams, is symbolic of the
ills of amateur radio. In that sense, Morse testing is Satan incarnate. Old
Nick is whispering in the ear of every potential amateur all the tired old Morse

Myths with the full power of the Federal government behind him. That's pretty intimidating to someone entering amateur radio. They're likely to believe the myths are true instead of an evil satanic lie. And that's likely to color the way that they approach amateur radio, perhaps for the rest of their lives. And for those who know better, inside and outside amateur radio, it is a major embarrassment and black eye to the service that such myths are still held and worshipped as gospel.

>hobby/service will indeed serve the public's interest.

I offered a way out in another message. Briefly summarized, we want at minimum a testing system that ensures an applicant knows enough to *cause no harm*. That's paramount, and not trivial despite your talk of appliance operating.

First of all, we want the applicant to demonstrate an understanding of what Part 97 says, and show an ability to interpret it in light of real world situations. Frankly we don't care if he can recite Part 97 from memory or not. He is expected to have a *current* copy of Part 97 in his possession as an amateur, so he should have to show he knows how to use it to answer regulatory questions. Thus this should be an open book exam, presenting real world situations and expecting the applicant to access the appropriate regulations, interpret them in light of the described situation, and respond appropriately.

Second, an applicant needs sufficient understanding of radio theory to *recognize* situations where technical violations could occur, and be able to find and address solutions to those problems. Again this should be presented in a real world manner, and the common technical references an amateur would be expected to consult in real life would be allowed to be used during the exam.

Third, an applicant needs to demonstrate sufficient familiarity with operating practices so that he won't be a source of disruption on the air. This section too should be based on real world situations, and the applicant should be able to choose an appropriate response to those situations. Access to an operating guide such as the ARRL volume, would be permitted for this section of the exam.

Since the exam pool questions and answers must be public, the VEC question committee should set the size of the pool large enough to make memorization of the questions and answers impractical. And of course the actual Q&A manual would not be allowed as one of the references the applicant could use for the test. Note that some of the scenarios presented could be quite arcane, and require considerable critical thinking to solve correctly. As to the size of the exam, I would suggest that each of the sections could run 50 questions.

This is the sort of competency testing we need for the amateur service. We shouldn't care if an applicant can demonstrate feats of memorization or if he has mechanical aptitude as a modem. All we want to ensure is that he has some idea what he is doing, is alert enough to recognize situations which might be troublesome, and knows how to access the materials necessary to keep him out of trouble. These are real world skills he needs to have to be an amateur. And they should serve him well throughout his amateur career.

>it.

And you can, working on SMD is actually easier than thru-hole work once you master some very simple techniques. The necessary equipment is also quite inexpensive. My entire SMD rework station fits in a pocket size roll pouch and cost under $100.

Now I admit that I am a test equipment junkie, and have far more of it than I need. But I didn't spend a fortune to acquire it, and could do without most of it for the vast majority of servicing work. Poverty isn't an excuse for not being well equipped to service amateur equipment.

The one thing you must have is enough technical knowledge to understand your equipment. There is absolutely no excuse for an amateur not to have that. One of the primary purposes of amateur radio is to develop the skills and knowledge to permit you to work on equipment (or even scratch build it). This must be an ongoing endeavor, but fortunately magazines and books are cheap, other amateurs are usually willing to share their knowledge

or lend a hand to show you how to do things. etc. The only reason to remain ignorant is to refuse to try.

>> In fact, if hams were more technically competent, they might
>> actually BUILD more of their own gear ... either from scratch
>> or from kits (a resurgence of kits would certainly occur if there
>> were more people capable of building them).
>>
> Again I agree 10000 percent. The prophets of doom say that
>hams can't get parts to build with. If ever there was a MYTH propagated,
>the no parts MYTH is it. Never in the history of the ham radio service
>hobby has so much good stuff been available and and microcents on the
>dollar.

Boy is that ever true. What we have today is an embarrassment of riches when it comes to the parts needed to build even advanced equipment. Most of it is very cheap, some can even be free as manufacturer samples. You have only to look and you will find.

>Unfortunately the so call experts intimidate a lot of
>the newcomers into thinking that it takes a Ph.D. to design and
>build complex equipment. Nothing could be further from the truth.

Indeed, modern VLSI has made building even complex equipment relatively simple.

Well, that pile shouldn't be too old. Much of the stuff seen in the ham magazines is so retro that one wouldn't want to emulate it.

>That is what I have not
>been able to put across in my prior postings. I am not proposing
>that we should cloak the hobby in mysticism, just invoke the magic
>that pulls us into the hobby be it technical or even Morse if it works
>for them. A simple concept that is difficult to explain when everyone
>is too busy ranting from their high altitude soap boxes.

I still think magic is the wrong word. We do want to light a fire of enthusiasm under amateurs. We want them excited about the possibilities open to them. But we want them to fully comprehend right down in their guts that there are no mysteries and no magic. They don't have to be magicians, just moderately skilled technicians, in order to fully participate. We want to give them a sense of empowerment that they *can* understand and that they *can* do. No secret handshakes are required, no lodge hall myths needed.

>continuing quest with code as another skill to master and maintain.

ARRRRRRGH! Oh gag me with a spoon. This is the sort of nonsense
we should be trying to stamp out, not encouraging. We aren't some
primitive tribe, we aren't a coven from the Dark Ages, lets not act
like one. We should, until they demonstrate otherwise, assume our
fellow amateurs are rational human beings, not savages prancing
around a fire.

Hi Bob, sounds like you're implying that I did something illegal.
Anybody with half a brain can see that you have switched from
arguing the issues to personal innuendos. That's what usually
happens when one is losing an argument. It matters not one iota
to the *issue* whether I assumed my dead twin brother's identity
and don't know a single Morse code character. What you are doing
is called "argumentum ad hominem". Did you think a member of Mensa
wouldn't recognize it? Guess a real ham wouldn't even notice?

My novice license expired in 1952. If I had waited until
1997 and got a no-code tech license, I would still be eligible for
OOTC membership. OOTC requires on the air 40+ years ago, nothing more.
What? Real hams shouldn't use conditional licenses for OOTC membership?

I traded my AZ call, KG7BK, for my previous CA call, W6RCA, just as
soon as it was possible. You don't seem to like the fact that I
got my old call back. With a call like yours, I don't blame you
for being jealous. Real hams have Wx3 calls.

Why is the personal attack necessary just now when you know
I have previously freely volunteered the information that I had
never had an official 13 wpm CW exam? What can you possibly gain
by me repeating the story? Once again, the old-phart general who
gave me my conditional exam didn't bother testing me for Morse
code since I had bested him over the air at CW and he had
no machine for sending Morse code. So here I am as an advanced
with a EE degree and 40 years of engineering experience as a result
of that conditional license. Would you have me undo all of that,
or what? Real hams don't need EE degrees? They only need Morse code?

I gather in your way of thinking, I should be kicked out of ham
radio since I didn't get into it the "right" way. What I did was
legal but somehow immoral based on your system of morality? Guess
you don't want to talk to Jim after all since he got his license
legally through the waiver process. Real hams don't get waivers?

Look for me any night on the novice portion of 40m. I do not enjoy
CW QSOs faster than 10wpm. Guess you would tell me to do 20wpm
whether I enjoyed it or not but to do so would be a sign of mental
illness in more than one of us. What? Real hams don't do 10wpm?

Would you like to start a new newsgroup called alt.Cecil.die.die.die (like the alt.Barney.die.die.die) or would you like to get back to the issues and avoid personal innuendos from now on?

73, Cecil, W6RCA, OOTC

Actually Alan for some people it is not all that easy. Apparently is was reasonably easy for you but it can be very difficult to impossible for others. Saying "it is not so hard" strikes a nerve in folks who expended massive effort to master code, even worse for those who simply could never do it.

As to its value as a filter, what does it filter, and is this filtering a good thing? It filters out busy technical people I fail to see the benifit in this. It apparently does not filter out lids as 75 meters and portions of other bands demonstrate. Some of the best most curteous operators you run across are the new nocode techs. They don't quite have it all down yet and they want to do things right so they try harder. In my area at least they run most of the clubs and organize the hamfests because it's all new to them and they want to contribute.

In fact the primary beneficiaries of the current caste ooops I mean incentive system are the code adepts perhaps at the expense of the greater good and even amateur radio itself. Just some food for thought.

Hi, I just took apart what I believe is a 1.3 GHz data radio and found a
tranciever unit that says "Icom fx-609" Has anyone ever heard of this?
I was wondering if I could tune it to 1.2 GHz.

Any info would be greatly appreciated.

Thanks,

Scott Sidener N0WFL sidener@umr.edu

Thats ridiculous, but maybe not for you. If a person spends 2 fifteen
minute sessions per day for 3 - 4 weeks that person should be proficient
enough to copy 20 wpm. There is a stipulation though. The person must
WANT TO LEARN the code.

> It takes another 5 years of practice to begin to approach the proficiency
> required to communicate with all but the very best operators on the air.

I telling you from experience. If you pass the code at 20 wpm and then
operate a 5 wpm, as long as your code is not QLF, you will be operating
proficiently with anyone that QSO's with you at 5 wpm. However, if you
passed the 20 wpm code I can't comprehend why you would want to operate
at a slower speed, unless you JUST WANTED to operate slower or work
someone that sends at a slower speed. Geez, is it really that
difficult???

> Some day I hope to master the code, but I fear it is another 5 years away.
You're a quitter; a loafer; a whiner; a procrastenator. If you
continue to make excuses you'll never feel at ease at 20 wpm.

Practice...Practice...Practice, you'll get there, someday, SOON if you
REALLY want to pass the test. GOOD LUCK!

Hi,
When I am my local mcdonalds drive-thru, if I set my car radio
to 92.5
fm I can hear what the employees are saying on the headsets or what the
car behind me is ordering. I was wondering if there was some way I could
inexpensively get hold of something so that I could chat along with
these people. Or, a friend told me that you can make something which
blocks out all radio signals and transmits something you say into a
microphone on them. This would be good as I could then listen with my
radio what people order then inform them not to because it is crap!

Thanks

Hi, Gary.

Back when I was a teenager, I had the time to experiment with antennas and radios, and to keep up with all of the latest technology relating to amateur radio. Many times I pulled an "all-nighter" talking to fellow hams and working on radios. Although it was great fun, as a teenager I put way too much emphasis on ham radio.

Today I have a family and a full-time job. I'm an instructor and program director of Microcomputer Systems Technology at Central Piedmont Community College. I spend a great deal of time staying abreast of all of the latest technologies pertaining to the PC. In addition to my administrative work as program director, I teach students programming. I've been teaching students Pascal and C most recently. However, I must continually study other programming languages that I might have to teach, such as C++, Java, Visual Basic, Delphi. I must also remember the applications software, such as Microsoft Office Professional, and operating systems, such as Windows 95. It's one thing to be able to personally use this software. However, the level of understanding is

totally different when you have to teach it. Now, I've stated all of this so that I can pose this question? There is only 24 hours in the day. When in the world do you have the time to experiment with "modern methods?" and to spend much time "self-training?"

I think I have a much better perspective on amateur radio today. It's a HOBBY to me. I got into ham radio for the pure joy and excitement of the hobby. Because I do treat ham radio has a hobby, I don't spend an inordinate amount of time with it anymore. My major goals of amateur radio were fulfilled years ago. Today my major focus is on God, family, and profession.

Morse Myths? What in the world is that? Do I think that real Hams are those who know the code? Of course not! That's absurd! Do I think that Morse code is superior to modern digital modes of communication? Certainly not! Do I think that Morse code is antiquated as you suggested? Well, it's antiquated in the sense that it's an old mode of communication. Is it obsolete? Certainly not! If it were, few folks would be using it. I contend that Morse code is still an effective means of communication. Does the Morse code test requirement prevent one from experimenting or advancing the current state of communications? No. There is lots of room in the VHF/UHF spectrum for that. For those who wish to learn the code, there is also some room on the HF bands.

Gary, I'm in favor of keeping the Morse code test requirement for a couple of reasons:

* Among the amateurs on the HF bands, it's still a popular mode of communications.

* Despite what you and others contend, I see no evidence from the crowded
HF bands that amateur radio is dying. Futhermore, I don't want the HF
bands to become more and more congested. The Morse code test requirement
seems to me to be an effective means of controlling that congestion.

Is the Morse code test requirement fair? I think so. The vast majority of humans can learn the code. Only a small minority cannot. Would eliminating the code requirement and increasing the difficulty of the theory be more equitable? I think not. Learning the code doesn't require above average intelligence and maybe not even average intelligence. However, increasing the difficulty of the written exam would eliminate a far greater number of people from the hobby.

I never considered learning the code as my highest aspiration as an amateur. Nor does the requirement imply that. Certainly, it was an aspiration. That's why I learned it. But it never prevented me from accomplishing any goal that I had.

Best regards,
Lindsay Foster

So you are telling us that the guy who tried for 20 years to get to
13wpm didn't want to learn the code? Say Terry, do you really want
to learn how to dunk a basketball? If you only want to learn how,
then you can.

Here's a step-by-step "how-to" for saying hello to cops.

1. Open the phone book and find the address of the local police station.
2. Get in your car and start it.
3. Drive until you reach the address listed in the phone book.
4. Park your car in the provided parking lot, shut off the engine, and get out.
5. Walk into the building displaying the address listed in the phone book.
6. Say hello to all of the cops.
7. Do steps 5-2 in reverse order.

Not only is transmitting on a frequency which is not allotted to the amateur radio service illegal, it is STUPID!

have you ever read an fiction or good history or have you spent your
whole life reading the pathetic prose in EDN?
>

Gary, it is this ARRRRRRRRGh! response that is crippling your cause and
causing the pro-code fellowship to react as they do. The above is
not even a metaphor. For example: When working as and Army S2/G2
section cheif there were three cardinal points associaded with
battlefield intelligence. 1.Strength of Troops; 2 Quantity and
Condition of Equipment; 3 Troop Morale. No single point was more
important than the other.
What we see happening in our amateur hobby service and a primary
reason for its decay is a form of anomie brought on by extremely
poor morale caused by an ongoing lack of self esteme. This hobby,
unlike other liesure time activities, does not have any public

entity to look up to and rather than having a coheasive goal in life
the hobby is greatly fractured into numerous special interest groups
whose interests are often at odds with one another. The singular
rallying point our hobby can look to--one that has applicablity to
moon bounce, M/W, traffic, weak signal, and so on is CW.
Now I am not saying that CW is the signle catalyst in our
hobby--but it sure is becoming the single greatest center of attraction
since HPM invented the Woufh Hong (sp). I would love to see you and
your droogs take the hours you spend on the net stirring up the pot
with little to show for you work and put that energy into drafting
up a proposal for the FCC to consider. WAR99 is on the horizon and
what better time to get your act together and have code recinded if
you think you can make a good case. If the anti-code faction can
find sound and rational support for its case the FCC should listen, if
it can't then I guess all the ranting in the world will not save it.
From a personal viewpoint I think I have made my position kind of
clear. I appreciate CW in that it is the "spirit" of our hobby (an
observation made my a close friend who would like to see a
technical only exam, yet appreciates the "Ham Spirit"). Yet if we can
find a better rallying point to keep our hobby together, then so be it.
I am just afraid that a totally tecnical focus would not
attract enough of the rank and file to maintain any kind of unifying
force alive. Old does not alway infer bad nor does new alway infer
good. Each case must stand on its own merits. "New is changing
too fast to make a solid statement about itself in many case.

Keep up the good fight

Bbbzzzz! Sorry, WRONG answer. Vanna has your door prize on the way OUT THE DOOR!

(BIG grin)

You got the two items mixed up. The other gentleman was asking about the HTX-242 MOBILE 2m radio, while you were thinking of the HTX-204 HANDHELD 2m / 70cm radio. :-)

As I understand it, the BIG reason why the 204 was so rapidly removed from the market was that it was easy to modify it (how, I have NO idea) to scan up and listen to the infamous "cell phone" frequencies. Which, as we all know, is a big, Federally-mandated "no-no". (sigh)

Anyway, if there IS a mod for the 242 MOBILE radio, I also would like the information, I would love to be able to talk back to my work on the radio, instead of just LISTENING to them. (Flames cheerfully ignored on this subject.)

Your mileage may vary. :-)

No personal attack, just a clearing of the air. And if the
above is not a slam at every ham that has a call with Two Alpha
characters in front, then what is it. Why in the world would I
be jealous of you Cecil. I have enough problems in life without
wasting my energy worrying about whether you think my call letters
are uncool. BTW W6RCA is a cool call and I am glad you got it back.
>

> or what? Real hams don't need EE degrees? They only need Morse code?
>
I really don't see what the EE degree has to do with ham radio. It is
not a requirement. I graduated University with honors and am finishing
up on my Masters this year, yet it has little to do with ham radio so
what's the point?

> I gather in your way of thinking, I should be kicked out of ham

> legal but somehow immoral based on your system of morality? Guess
> you don't want to talk to Jim after all since he got his license
> legally through the waiver process. Real hams don't get waivers?

Why would I want you kicked off the air? Hell, the more
the merrier Its just to darn bad that have not had these discussions
on the air as it would sure make for interesting communications. I
think we can both agree that most ham QSOs, regardless of mode, are
perfunctory in the main and usually pretty boring.
>
> Look for me any night on the novice portion of 40m. I do not enjoy
> CW QSOs faster than 10wpm. Guess you would tell me to do 20wpm
> whether I enjoyed it or not but to do so would be a sign of mental
> illness in more than one of us. What? Real hams don't do 10wpm?
>
Actually I prefer to putter around the same speed that way I can
write it down from time to time without cramps. Yes, even so-called
CW operators have their problems with the outdated mode. Basic rule
of the road on CW is to give back speed as it is given to you. If it
is 3-5 wpm incoming then it is 3-5 outgoing. No problem. If it is
40-50 incoming I say GNOM/73 and turn the rig off.

> Would you like to start a new newsgroup called alt.Cecil.die.die.die
> (like the alt.Barney.die.die.die) or would you like to get back to the
> issues and avoid personal innuendoes from now on?

Me thinks I have poked too hard at you Cecil and for that I apologize.
My goal this weekend was to wade into this hornets nest to see what
was driving the CW wars. I have found that both sides have strong
convictions about their stands on the issue of code and that there is
probably little room for compromise among the players. Contrary to most
of the anti-code-test faction's published thesis, I find that most of
the arguments in favor of a no code test to be steeped in unsupported
emotional technical dogma and the pro-code-test faction to be steeped in
hopeless tradition. Tis lose-lose combination at this juncture as I
see it. But as the comedian, Dennis Miller says, "Its just my opinion,
and I could be wrong."

In any case, I wish you well, Cecil, and perhaps we to can
continue this dialog without rancor or strutting or innuendo and
perhaps see some area where both sides can save a lite bit of
their cultural turf and have a little cake to eat as well.
Tradition. Besides, All little kids love Barney

keep up the good fight.

2656. Kenwood Svc Bulletins / TH-215 Audio Dropout

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-11 00:00:00 UTC
From: Paul Anderson <anderson@palmnet.net>
Message-ID: <33755F30.1E10@palmnet.net>
Source record: 198677

Over a year ago, I found an online source of Kenwood Service Bulletins. I'm pretty sure that it was at the Kenwood site.

Now I'm having trouble with my TH-215A (2m HT, similar to TH-225). Kenwood seems to have re-worked and perhaps moved their web site, and I haven't found the Service Bulletins with any search I've tried. Does anybody know if they're still out there somewhere?

Failing that, does anyone know the common failure modes of the TH-215? My symptoms are that the receiver audio just fades away a few seconds after the rig is turned on, even with strong received signals or with no signal and the squelch wide open. Initial troubleshooting points to a problem in or around the BA526 audio amp, or perhaps the squelch circuit controlling it. Does anyone recognize this problem?

73 & thanks!

you
> are so quick to defend the position of those who want to dumb the hobby
> down to the lowest common denominator?

Actually beeping is the "dumbest" part of ham radio ... a pure aural-motor
reflex conditioned much like the salivation of Pavlov's dogs in response to
the sound of a bell ringing ... just like some people have musical talent
and some don't, this conditioning comes easy for some and is virtually
impossible for others ...

Many of us are capable of easily building machines that are easily capable
of outperforming the very best Morse operator in the world with the best of
OOK Morse receiving gear ... hands down, slam-dunk by a very wide margin.

Insisting on code rather than real, meaningful technical knowledge and
abilities is the dumbing down of ham radio, *not* the elimination of
obsolete
requirements that serve as nothing more than a hazing ritual ...

> Much like the liberals want to do to America?

Ridiculous comparison ... see the last paragraph preceeding your statement.
Those who oppose code testing are actually protesting a govenment-mandated
welfare program for Morse and proposing more rigorous written exams on
rules
and theory, coupled with necessary modernizations in the technical rules.

That can hardly be characterized as a "liberal, dumbing-down" ...

> You can always be a CB operator you know. They don't require code.

Typical pro-code, bigoted, "got mine, you can go to hell" response noted.

> Burden of proof is on the prosecution. You show me any good reason to
drop
> it, THEN I'll defend my position.

Actually, as Jefferson (I believe) said, "The government that governs least
governs best." (or something very close, to that effect, if my quote is not

exact) ... that implies that the burden is really on the government to
justify
(and continually rejustify) any restrictive requirements that it imposes
upon
its constituents ... the burden of proof is effectively on the government
in
this case, just as it is in a criminal proceeding ...

That's funny, I've always heard the age ushered in by those folks, and
by the likes of Lord Kelvin, Burke, Franklin, etc, referred to as The Age
of *Reason*. It signaled the end of the animists, the shamans, the witch
doctors, and the alchemists with their mysticism and belief in magic.
It also threatened the hold of the priests with their dogma and appeals
to supernatural intervention.

Well, if that's the way you operate, then I feel sorry for you, and more so
for those who must share the spectrum with you. That sort of behavior
is to be expected, I suppose, from one who thinks theory and Morse Code
are equivalent.

>>
>Gary, I am merely using the same lame logic that you and Cecil and
>a number of the self appointed saviors have applied to the no code
>arguments.

The conclusions drawn by logic are only as valid as the assumptions
on which the chain of argument rests. By assuming that theory is of
no more value than mere rote mechanical Morse hazing, and that both
are mere rites of passage with no intrinsic purpose, your chain of logic
arrives at an invalid conclusion. Theory underpins *all* radio communications
methods, not so with Morse. It is a specialized niche method which has
now become globally obsolete except where it is propped up by antiquated
amateur regulations.

Fundamental electrical theory does not become obsolete, Maxwell's equations are as valid today as they ever were, Ohm's Law still holds, etc. Theoretical knowledge does expand over time, of course. Before Shannon, we didn't know the fundamental limits of communications for example. But even against all the progress we've made, what Faraday taught us is still valid and vital, what Hertz demonstrated is still true and essential, etc. The tools with which theory equips us are something we can apply today, tommorrow, and every day after that.

>If we are going to do something to help the amateur

>be decided on whether or not we use code or tough theory tests as
>a method of selection. Me thinks that the time may be at hand where
>a good psychological screening would do more good to preserve the
>hobby than any kind of radio related exam.

I seriously doubt that examinations have any impact on the behavior of amateurs on the air. At best, an exam can determine if an applicant *knows better* than what he is doing. Thus it removes the excuse "I didn't know" from the vocabulary of the violator. But that's all it can do. To regulate behavior, strong enforcement is the only method which works. That has gone away in recent years, and we hear the predictable result.

> like yourself, I make my living in the electronics engineering

>players to copy 20 wpm.

I'm surprised that you think I advocate a "tough" exam. I certainly believe that today's exams are inadequate to assure an amateur knows enough to operate in technical compliance with the rules. But I am not advocating a graduate EE level of expertise on the part of amateurs entering the service. That would defeat the hands on self-training aspect of amateur radio where it serves as a lifelong learning laboratory. I would expect an amateur's knowledge and expertise to increase over time as he makes use of the hands on learning lab that is amateur radio, but I assign no fixed timetable or benchmark to that progression. Amateurs can proceed at their own pace, following their own interests, for their entire lifetimes. As long as they are knowledgeable enough to *do no harm*, I have no problem with that.

I would *hope* that as amateurs learn more, they would apply what they learn to their operations. I would *hope* that they would adopt better methods as those become available. But I don't absolutely insist on that. If they want to vegetate in their back garden, they can do so, but they should realize that they aren't contributing to the goals of the service that way. And they definitely should have no right to impede the progress of others due to

their own choice to remain ignorant and backward.

>am or fm perhaps he/she will have a better appreciation for the theory
>they have drool out when VECs ring the starting bell.
>
>Your turn, Gary

While I don't have a problem with a "meters and soldering iron" sort of examination, I don't think it is too practical to administer to a meeting room full of applicants. We can achieve the same thing with written examinations. That requires use of the dreaded "word problems" where the applicant has to first grasp what is the problem to be solved, determine how to solve it, and then produce the answer. That's entirely practical to do. I recently sat for my State HVAC exam and it had just that sort of problems on it.

I think far too much is made of this "rote memorization" business. The only thing which really requires rote memorization for the current amateur written exams is the section on regulations. That's completely arbitrary, like Morse, and requires brute memorization. Anyone who is attempting to memorize the written question pools for the theory portion instead of taking the few hours needed to grasp the principles which would equip them to answer any problem is, of course, stupidly wasting their valuable time. If that is a concern, the answer is simple and doesn't require any changes in the testing process or the regulations. All we need to do is make the question pools large enough to make it impractical to memorize them. That's directly under the control of the VEC question pool committee, and can be implemented without any other consideration. For example, if we enlarge the pool to fill an 800 page Q&A manual, as the old commercial license test pool did, then only an idiot savant would memorize it. They are very rare, so I don't think that would be a problem.

> Cecil, try to comprehend one important piece of information...this is the

> AMATEUR radio service. We do things differently than professional
> radio services, for a good reason.

To be more accurate, we (as a body, there are individual exceptions)
have fallen FAR behind the "professional radio services" in technology.
Actually, most of the other radio services can hardly be called
"professional" ... I doubt that many taxi drivers, or UPS/FedEx drivers
or policemen or firemen or (ad infinitum) know much about the radio
technology that they employ every day ... it's just a tool to them ...
WE, however, are *supposed* to be FAR more than appliance
operators and we're not meeting that goal ... and that's why ham
radio will die (soon) if we don't make dramatic changes in things ...

> We retain the Morse code requirements
> to ensure that AMATEUR radio operators have this capability in
perpetuity.

WHY?????

> It is deemed an important skill, the very basic form of electronic
> communication.

An absurd assertion ... it's a historical curiosity, nothing more.

> As long as someone knows how to create a transmitter, and knows how
> to use Morse code, communications over long distances can take place.
> Its beauty, its value, and its who reason for being is related to its
> SIMPLICITY.

FSK is just as simple, but carries AT LEAST a 6 dB advantage ... and
could be copied by ear if one were willing to use it at rates comparable
to OOK Morse transmissions ... it's simple more useful to use machines
to encode/decode it and they can easily run circles around manual
encoding and decoding ...

> There is simply no more logical requirement in the ARS than the code
> requirements, mainly because they are clearly defined, have a specific
> purpose, and have numerous side benefits, e.g. creating disciplined,

What is it with these guys? They'll spend $2K on a new HF rig with a gold-plated code key plus another $4K on a tribander and tower, but they're too damn cheap to spend a couple bucks on deodorant and new underwear. Every hamfest I've ever been to has been dominated by these fat, balding, middle-aged men with beer bellies that hang at least a foot over their (usually free hanging) belts. Half of them have BO so bad you'd swear they haven't showered in a year and the other half smell like they just dumped a load in their pants!

It's called "personal hygiene." Learn and practice it.

Talk on the public service bands without authorizaiton and you will be saying hello to cops; as they arrest you!

Also, if you are a ham and you try this "just for the fun of it", hopefully the FCC will pull your ticket just for the fun of it.

We are not CB, but rather are licensed operators. We are losing enough already without some loose cannon blowing it for all of us.

2681. HALO Rocket Balloon Launched

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-11 00:00:00 UTC
From: Gene Marcus <mmarcus@hiwaay.net>
Message-ID: <3375DF31.150E@hiwaay.net>
Source record: 198709
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

The following was copied from WB8ELK's webpage:

ROCKOON FLIGHT A SUCCESS! Although the balloon
failed (burst) at about 60,000 ft instead of the planned
upon 100,000 ft, WB8ELK caught the balloon burst on
video and the "FIRE" command was issued. The rocket
fired and traveled to an altitude of (and this is only a guess)
30 miles. The exhaust blast hit the camera on the balloon
gondola, but the video kept on working. The
gondola/APRS/GPS/ATV package splashed down into the
ocean and a recovery boat is attempting to find it. The rocket
sent back spectacular photos from the very edge of space.
Please watch ABC World News Tonight and CNN, there should
be stories on both programs.

Are you truly advocating treating CW like spark and outlawing it? The question is, should qualified hams be free to use CW or not as they choose? To the best of my knowledge, No-Code International wants to eliminate Morse code *testing*, not make it illegal to use CW. If you want to use the force of the federal government to outlaw CW, you are worse than the most rabid pro-coder. I don't hear anybody advocating outlawing all the other modes except CW.

W6RCA : I won't be on it cuz I'm on 40m CW a couple of times a week.

> A traditionalist, eh?

For all the rational reasons that the pro-code crowd give for maintaining the code-testing requirement, I consider CW operation a useful skill to possess and advocate that every ham learn that skill. As time permits, I am in the process of trying to get my Morse code speed up to 20 wpm. In that respect, I am a member of the pro-code crowd. I am also a member of the anti-code-testing crowd because I oppose *all* welfare-state subsidies. I consider both of the following to be evils that should not exist:

1. Using the threat of force from the federal government to subsidize Morse code testing.

2. Using the threat of force from the federal government to outlaw CW.

The evil is the threat of force from the federal government, not the CW mode. As a died-in-the-wool Objectivist and Libertarian, I cannot assume any other position. Assuming any other position makes one a statist (collectivist) e.g., communist, Nazi, socialist, fascist, etc.

If you blame the CW mode for the present sad state of ham radio, it's like blaming the gun when somebody shoots you. CW testing is the evil, not the CW mode. Don't throw out the baby with the bath water.

Hi Bob, If Dr. Williamson had time to get on the net, he might have time to learn Morse code. I will make an appointment with him and ask him if he wants to and has time to communicate over email with you.

> The reject from an asylum is your metaphor and your
> lopsided analysis, not mine.
If it doesn't apply to you, why do you respond to it? Some people believe that Dr. Williamson is a lower-class ham simply because he doesn't know Morse code. Are you one of them? If not, my statement didn't apply to you.

> What say we now, Cecil?

Jim was supposed to send you an email explaining his biological problem with Morse code. Did you get his email yet? What say you?

Ca
> >
> > Cecil has been a ham for over 40 years he doesn't really need a radio

That's odd, The FCC database says that Cecil's prior call
was KG7BK, Hmmmmm. seems I remember Cecil reflecting once upon his
conditional license. Lets see. Hmmmmm. Conditional class licensee
who never sits for a bonafinde FCC code test is grandfathered into
a General Class when the conditional license is dropped. Then he
sits before a VEC for an advanced class test but now has a code
chit for his Conditional cum General ticket. Pretty good. Huh. Now I
suppose the W6RCA came from either a prior ticket held way back when or
perhpas a relative. Tis a vanity call none the less much like my
KE6F except I sat in front of an FCC examiner for mine so I guess it
is only a semi-vanity call. Hmmmmmm, perhaps someone will explain how
the OOTC guy went through the metamorphasis from Conditional to
Advanced. Now I could be wrong on this analysis and I sincerely
apologise if I am, but since Ole Cecil is held up as an icon of THE
Old Timer who has finally seen the light regarding the so-called
absurdity of CW, then perhaps he should be examined closely if he
wants to wear the Red Robe. Would be very happy to Schedule Ole
Cecil on 40 cw sometime so we could toss it around in real time.

It just baffles me why so many people think that it is a good idea to make getting a ham license as big of a pain in the ass as possible. Tests, tests, and more tests, and for what? Why not have one theory/reg test that tests whether an applicant can safely and legally operate his station, and leave it at that. This crazy maze of tests that we have lacks any rational basis. I have seen no evidence, none, that taking more tests makes us better hams. To the contrary, the hobby sucks nowadays because there are hardly any new hams. 20M SSB, as I've observed in the past, sounds like a geriatric ward.

I know of no other hobby that seeks to discourage newcomers the way ours does. Kind of an indication of the innate anti-social tendencies of many hams, particularly in the ARRL. They just don't like people.

2691. Cellphone RF/Cancer linked, ham radio RF next..??

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-11 00:00:00 UTC
From: Pom E Granate <seno417b@earthlink.net>
Message-ID: <01bc5e25$b35abb40$76432299@seno417b.earthlink.net>
Source record: 198719

Sunday 11 May 1997
Associated Press

"A clinical investigation has found the *firmest animal study evidence yet* that
RF radiation from cellular telephones causes cancer in laboratory mice. In an
18 Month study, the results of which were announced yesterday, several mice
were exposed to RF radiation produced by readily available cellular
telephones, both handheld and of the in-car variety, were found to be TWO
TIMES more likely to
develop cancers than their non-exposed counterparts." "The results of our study
provides evidence that strongly suggests that even casual exposure to radio
frequency energy, at various wavelengths and powers, may cause cancer cells
to develop in animal tissue", said J. Moulder of the Medical College of
Milwaukee.
H. Lai, a professor of bioengineering at the University of Washington
agreed saying
that "nobody has reported or seen effects like this anywhere else". Lai has
also
found that RF radiation from sources like cell phones do cause DNA damage
in
animal tissue."

I wonder how long it will be before someone reads this, sees a big ham
antenna
next door or across the street in their suburban development, and then puts
2 and
2 together...?? Like it or not, ham radio is in for a ROUGH ride in the
future, esp
if the neighbors get even a small inkling that your big beam antenna may be
exposing them to cancer causing radiation. Sure, it has not been proven,
and more
studies need to be done, however, bear in mind that this will not help one
bit if
the public *perceives* a *threat* to their health...from your
antennas/station..right
now after they've read this AP article.

Don't sweat the code issue boys, worry about if your neighbor thinks your
ham
station is giving him or her cancer, and your approached by the local
authorities
about it. (hint: Federal preemption of ham stations & local ordinances do

NOT
extend to public health issues....better keep that in mind)

2692. Open Letter to Eric Oyen (N7ZZT)

Eric,

I have just finished reading through the various accusations you have made against me on various radio-related Usenet newsgroups. This is in regard to your claims that I am somehow associated with other America Online members whom you have stated publicly are engaging in harrassment against you.

Please listen closely; I will only state this once:

I am in no way associated with any other America Online members you have mentioned on these newsgroups, specifically "FRNKBURNS" and "HLKINGSTON." Your assumption and public statements that our America Online screennames are all eminating from the same America Online account is incorrect. My account is in no way connected with theirs, nor am I associated with these or any other individuals whom you feel are harrassing you in any manner.

Furthermore, I have nothing to do with the childish games which are apparently taking place between you and some of the other citizens band radio operators, amateur radio operators, and Internet/America Online users in the Phoenix, Arizona area. My geographical location is nowhere near Phoenix, Arizona and I have no interest in what is apparently an ongoing feud between yourself and these other individuals.

I have never made any sort of inflammatory, insulting, or derogatory statements against you on any forum, public or private. Of the two Usenet newsgroup postings which I originated and which you commented on directly, neither of them was in any way defamatory against you. One was my comment on your ridiculous "BLACKMAIL ATTEMPTED" thread in which I simply stated that I found it humorous that America Online member "FRNKBURNS" could garner such a
heated reaction out of you simply by posting his remarks on a public newsgroup. Your assumption that I must be in some way associated with "FRNKBURNS" simply because I found your reaction to his remarks humorous is absurd and erroneous. The other thread, "SMELLY HAM OPERATORS", was simply my opinions concerning the lack of personal hygiene exhibited by many amateur radio operators, based on my own personal observations. I never mentioned your name, nor does this even apply to you unless you're one of the above-mentioned group of amateur radio operators.

In closing, I would ask that you cease and desist from accusing me of engaging in actions or collaborating with others in actions for which you have no proof to back up your claims. These accusations are false, and it is my opinion that you would have a difficult time backing up your statements in a court of law if charges were to be brought against you for libel and/or defamation of character.

Nor we other no-code-test advocates advocating outlawing the use of Morse
by those who wish to use it ...

> For all the rational reasons that the pro-code crowd give for maintaining
> the code-testing requirement,

I haven't ever seen one of those ...

> I consider CW operation a useful skill to
> possess and advocate that every ham learn that skill.

Adovcating and forcing are two different animals ... everyone is free to
advocate
whatever you like, but that doesn't give anyone the right to force their
desires
or their favorite mode on everone else ...

> As time permits, I
> am in the process of trying to get my Morse code speed up to 20 wpm. In
> that respect, I am a member of the pro-code crowd.

Fine an wonderful ... you *choose* to pursue that because you want to ...
if someone held a virtual gun to your head and said "do it or else ..." I'm
pretty sure you'd resent it and feel it inappropriate and oppressive ...

> I am also a member of
> the anti-code-testing crowd because I oppose *all* welfare-state
subsidies.
> I consider both of the following to be evils that should not exist:
>
> 1. Using the threat of force from the federal government to subsidize

Agreed ...

> 2. Using the threat of force from the federal government to outlaw CW.

Also agreed ...

> CW testing is the evil,
> not the CW mode. Don't throw out the baby with the bath water.

Agreed ... I never proposed that we should, nor would I support such
a proposal ...

That's a distortion ... the use of digital modes has grown rapidly and is
continuing to grow, while the use of Morse has shrunk over time ... less
than 40% of ham EVER use Morse.

The Morse requirement keeps out *exactly* the types of people who would
use the more modern modes, develop new ones, and promote progress and
technical growth within our service ... as was recently said, it scares the
hell
out of the beepers, whose only "claim to fame" is being able to beep fast,
that
there might be an influx of technically competent people into our service
.. that
would displace them from their self-declared, false state of "superiority"
and
their egos can't fact that prospect ...

I call that bigoted, narrow-minded, and ignorant ... first, it's only a
"small pebble" for the luck few with the talent and inate ability to
learn it that quickly and easily ... many have slaved for years trying
and been unable to succeed ... (I'm not counting myself in that
group ... I used to be much more proficient than I now am and at
my peak I suspect I could have passed the current multiple-choice
test at 20 wpm on a good day if luck was with me ... today is a
different story, however, and it makes NO sense to force me to
go through an unwanted ordeal to obtain totally unrelated priveleges
in the publicly-owned spectrum ...

> If a fellow or gal cannot invest a small amount of time to uphold a
> tiny bit of tradition, then they are not worthy of consideration.

WHOSE tradition??? Not mine ... and I've been a ham for over 20 years.
"Tradition" is a lame excuse used to "justify" something when no
rational, supportable argument exists that would legitimately justify
that thing ...

> No one in this world is so important that they should be allowed
> special dispensation for no other reason than being technically
> inclined.

The point is that no special dispensation should be necessary ...
we should simply change the rules to make them relevant to today's
technology, the needs of society, and the future survival of our
service ... unless we once again become relevant and produce
sufficent benefit to society in return for our spectrum (both areas
where we fail miserably), we will loose our bands and cease to exist.

> Having taken and passed every FCC written examination, commercial 1st

> and it does not change--just the applications evolve.

If you had returned from the testing sessions and sat down thinking "I've passed the test and there's nothing more to learn ever" like many, many of today's hams, you'd today be hopelessly incompetent ... like many, many of today's hams ...

WRT theory being unchanging ... ridiculous ... the body of knowledge and techniques (all part of the technical/theory test) is growing my leaps and bounds ... that's why *I* would advocate retesting at renewal time to assure technical currency ... we've far too many Rip VanWinkles in our ranks ...

> Again, if we could just express our concerns in a civil manner
> and somehow deal with the less than perfect world we live in and perhaps
> bow towards CW from time to time to recognize its past accomplishments

We've been forced to bow to this false god for far too many years already the time to bowing in subservience is past ...

> as well as its role in current amateur affairs

its major role in current amateru affairs is to serve as a divisive force that creates turmoil, discrimintation, and ill will amongst hams ... we'd be far better off eliminating that once and for all by elminiating the test and making Morse purely optional ... if it survives on its own merit, fine. If it dies out due to obsolesence and lack of interest, that's fine, too ..

> rather than taking
> broad brush strokes painting ALL pro code supporters as dead wood who

Sorry 'bout that ... I couldn't resist ... all that stuff about
romanticism, etc.
just set me off ... ham radio is *supposed* (read part 97) to be a
primarily
technical pursuit ... not some romantic fantasy of saving the day with a
Morse tx cobbled together from the wrecked remains of something else
in some unlikely emergency ... real value is brought to emergency and
public service communications by well-trained operators using modern,
reliable, and prepared equipment and using pre-planned and practiced
methods ... nobody WANTS Morse any more in the real world ... only
a minority of hams cling to it with quasi-religious fervor (remember, even
the ARRL's surveys show that less than 40% of hams EVER use Morse
any more ...)

[snip]

> Please! Tell all how the technical level of our hobby will
> rise like the Phoenix when code is no longer part of the entry
> mechanism. Give me three solid examples. Hell, give me at least one
> that is not full of vague and apocryphal rankings.

First, in over 25 years of career as an RF equipment designer and
communications systems engineer, I have worked with literally hundreds
of highly-qualified, competent, level-headed, polite, considerate folks
who would have made wonderfully well-behaved hams who could have
and would have contributed greatly to our service and our community
were it not for one thing ... the Archaic Retro Radio Luddites and their
cronies the "CW Forever Olde Fartz" insisted that the they be required
to demonstrate a Pavlovian conditioning in an 1847 encoding/decoding
scheme that virtually anyone with a grip on the technical realities admits

is about THE worst possible encoding scheme one cold conceive, that has "seen better days," and in which they have absolutely ZERO interest.

These are people who could sit down on any given morning and pass the extra theory while still half asleep and not break a sweat ... They (rightly
and understandably) refuse to bow to a community which predominantly consists of their technical inferiors and waste significant amounts of their
valuable time and eneergy just to jump through the hoop of some cranky old men's club's fraternity hazing ritual ... in other words, Morse and the
attitudes that go with it amongst the technically ignorant who still think Morse is better than sex are the SOLE reasons that thousands of otherwise participating, contributing technical experts have stayed away in droves.

In short, if Morse had been made optional about three decades ago, like it should have been, we'd have a far larger number of technically competent hams in our ranks and we probably wouldn't be stagnated with the technology of the 1950s and 1960s like we currently are ...

> What I have
> said about our technical testing is true and it needs more than
> a little fixing. Both of us have made similar observations of the
> sad state of affairs our ham operations are in--yet we seem to be
> on different planets in our quest for the holy grail of radio
> amateur salvation.

We do agree that the technical testing methodolgy is flawed and permits huge numbers of technically incompetent people to gain licenses ... that's directly because the entire emphasis of the ARRL's "Incentive Licensing" scheme was to assert the ability to copy faster and faster Morse as the primary metric of "goodness and merit" in a ham. This "search for the holy grail," quasi-religious pursuit_of/demand_for Morse "skill" has diverted the
attention of several generations of hams from the true (technical) nature and
purpose of ham radio ... this perversion has been exacerbated by the ARRL's insistence on promoting a "paint-ball combat" mentality of competitive sports
where the participants primary goal is to demonstrate their idea of machismo
by stomping everthing and everyone into the dust with their "mine is bigger than yours signal." This has perverted our service into "it's ONLY a hobby"
and resulted in the total distortion of our purpose and raison d'etre ... I would
imagine that Mr. Maxim would spin at at least low RF rates if he could see what has become of ham radio and the League in the past few decades ... he'd
probably use the Wouff Hong on the first cretin who insisted in knowing his

"10-10 number" in order to talk to him ...

> I see a number of causal agents that are tearing
> at the fabric of our hobby, you choose to take a singular and
> purely emotional and often vengeful mission citing CW as
> Satan incarnate without so much as a clue as to the rest of the problems
> facing the hobby.

See above ... there's more wrong with ham radio than *just* Morse
but MOST of it rests on the foundation of perverted attitudes that
Morse fanaticism and the ARRL have promoted and enforced for the
past few decades ... the ARRL and it's retrogressive, stagnating
policies are orchestrating the ham radio equivalent of Jonestown or
the recent mass suicides near San Diego ... unless hams wake up
and reject this cultist fantasy dogma and at least make an effort to
catch up and move towards the 21st century, we're equally suicical.

The idea that ham radio can march into the 21st century and survive
with an insistence that it's primary focus is the maintenance of Morse
forever (or that Morse is even *important* any more) is at least as far
from reality as the belief that those poor, misguided folks near San Diego
have joined aliens on a spaceship following the Hale-Bopp comet ...

> wait your plan and just shooting the CW messenger is not good
> enough. I want some tangible suggestions on how we can fix
> the testing process that will ensure to a degree that our amateur radio
> hobby/service will indeed serve the public's interest.

Steve (much to my surprise and pleasure at the time) recently made a
proposal that I felt went a long way towards what we need ... I offered
up a few suggested modifications and others did as well ...

It basically was a compromise (for the time being at least) that would
have kept a 5 wpm Morse test for HF access to satisfy the ITU treaty
(though a 1 character/day test would, too, since no speed requirement
is specified). I suggested starting with 3 classes of license .... a VHF
and up no-code like today's no-code tech, only with a more appropriate
level of technical knowledge required for the privs conveyed; a "beginner"
(or whatever you want to call it) license with the same test, plus 5wpm
code, and full HF access all bands, all modes with a power limit of say
50-250 Watts PEP output maximum ... (the theory test for these 2 "lower"
classes of license would be AT LEAST AS comprehensive as the (current)
full general class, probably a bit more ...); and the "advanced" (or
whatever
you want to call the "highest" class of license) would gain the 1500W PEP
output power limit, the ability to be a VEC, etc. ... the theory for this

would
include all the elements for the lower class, plus more to be equal to or perhaps even a bit more comprehensive/advanced than the current extra theory ... there would be no further code speed test to upgrade to this class.

The idea is to re-emphasize the technical purpose or our service and remove the perverted emphasis on the worst possible mode available (except for spark
which was outlawed years ago) ... note I have not proposed and would not support a ban on the use of Morse by those who wish to learn an use it ... but it cannot continue to be the "guiding light" by which all of hamdom is measured, judged, and valued ... that perverts us from our real purpose and gives us a very bad public image ...

> amateur lately? Or have you accumulated enough test equipment to
> set up a facility so you can fix your gear if it breaks? Or do
> you just spend your every waking hour sitting in front of the PC
> tapping out vitriolic dogma to entertain your droogs?

Actually I've encouraged quite a few new hams into the hobby, helped them "learn the ropes," etc. I've also been doing some design and development work that may in the relatively near term benefit many (I prefer not to go into details at this time) .... Yes, I have, or have access to "enough test equipment to fix my gear if it breaks" ... I also have a very complete set of design and development tools, ranging from

schematic capture (2 versions), to PCB design (2 versions), to simulation (analog, digital, block-diagram-level, and VHDL), as well as xPLD, FPGA, and full-blown ASIC development tools ... in other words, I can design and produce my own custome ASICs ... and I have plans of doing just that ... I also have software and hardware development tools for x86, PIC, TMS370, and several Mot uP/uC parts, as well as DSP development software and hardware tools for the TI TMS320C5x and 54x and Analog devices ADSP21xx series devices ...

I haven't published anything in the past few years ... it's been a slow period
for me in that regard ... but I've published quite a bit in the past ...

Does that measure up to your standards???

> > "get the hell off of 'MY' frequency with that newfangled digital stuff"

They will ... and they do ... the cretins with their strings of dits and swooshing
carriers don't really accomplish anything ... except perhaps to occasionally
cause a retransmission or slow the throughput down a tad ... but they can't really distrupt a well-designed digital system ...

However, that sort of behavior is STILL unacceptable and deplorable and should be discouraged and punished when proven.

> > If more hams were more technically competent, they'd be more

> to give them the needed exposure and hopefully sink the metaphorical
> magic hook into their emotional centers.

The problem is that too many balk at the Morse requirment ... it's
like "buyer's remorse" ... they're hooked and interested in all the
technical
stuff ... then they find out about the code and go off to write software,
build computer BBS systems, and other stuff that satisfies their technical
side without the torture and wasted time of Morse ... people who LIKE
Morse seem irrationally incapable of understanding that they are in the
vanishingly small minority ... they can't believe that people won't "come
around" and like it "if they just learn it and give it a try" ... that's
fantasy.
It's like forcing everyone to eat beets because YOU like them, in the
belief that "If they just try them, everyone will like them." Doesn't work
that way ....

> I did not say code testing is a useless hazing ritual. It is indeed a
> ritual and as I study this process in more detail I have come
> to believe it is an excellent ritual for all hams to partake in.

Rituals have no place in government licensing schemes designed
to grant access to publicly-owned resources like the highways or
our spectrum ...

> it were possible I would suggest that all hams, when they passed
> a specific level of code and technical testing, be taken to a
> quiet outdoor place, bon fires would be set, drums would pound, bamboo
> flutes would play, and each candidate would go through a real rite of
> passage ceremony where the license, in the form of some metal icon,
> would be presented to the initiate.

Perhaps is could be literally pinned to the flesh of their chests, like
in the recent military scandals??? I think you're taking this ritual
stuff FAR too seriously ...

> And with this initiation the new
> ham would be lauded for his accomplishments in getting to his/her
> current level, but he/she would be admonished as to what would be
> expected in the future. Technical competence would be but one
> continuing quest with code as another skill to master and maintain.

Code has a vanishing place in the future of ham radio ... times and
technology change and all the wishful thinking and dogma in the world

cannot change that ... the only question is will ham radio survive to have a future or will it stagnate so badly that it no longer provides enough "return on investment" to justify its' spectral allocations ... IMHO, we're at or past the failure point now and the regulators just haven't gotten around to figuring out how to drop the axe yet ... we need to do some fancy footwork and fast in order to escape the executioner's blade ...

> Carl, I would like to think that you and your buddies are sincere in
> your concern for the welfare of the hobby/service. It would be even
> more convincing if somehow the debate could be tempered with enumerated
> suggestions or steps by which a no code system could be worked our,

We've suggested exactly the sorts of progresive solutions that I've mentioned
above ... they are all always summarily rejected by the "CW forever crowd". The ARRL committee is actually proposing even more regressive "restructuring"
that will increase the difficulty of code testing and make code testing and even
more dominant barrier to upgrading than it has been in the past ...

> perhaps some schema that would allow the continued use of code testing
> in a form that will satisfy those who would feel cheated if their dues
> had been paid only to have the accomplishment denigrated by saying
> that their struggles were meaningless.

Learning faster and faster code has meaning only if the student enjoys and values it ... otherwise it was just a tortuous hoop that one jumped through to pass a hazing ritual ...

In my suggestions for the new license structure/testing schemes, I said that I would support a grandfathering of current priveleges for current licensees
until their next renewal time or 5 years, which ever was longer ... at which
time they would have to pass the new written tests ... and that I would very
much support retesting (with current material) at each renewal ... even if it
was just a quick "spot-check" test on newer develpments that everyone took, rather than a complete, comprehensive retest, it would emphasize the importance
of maintaining technical currency and the true nature of our service. I think the time allotted is sufficient notice and opportunity to study for those
who wish to maintain privileges to comply ...

> The operational relevance of

> find that an adhocracy of mixed modes seems to form automatically and
> for reasons that are too difficult to explain in this venue, ham radio

> just works despite all of its archaic trappings..works well.

When the crap hits the fan, preparation of systems, operators, and
proceedures, coupled with training and practice are what "cut the mustard."
NO EMS agency has any use for CW any more ... they all want tactical
voice on VHF/UHF-FM with SSB for wider area nets, and they want
packet interties for bulk written message traffic ... offer them a crew of
Morse ops and they'll virtually universally laugh you our of their op
center with instructions to get out of their way and stay out of their way.
Offer them something that they see as useful and they'll welcome you
with open arms in most cases ... unless they've had a bad experince
with untrained, unprepared lids in the past ...

>The reject from an asylum is your metaphor and your
> lopsided analysis, not mine.

NO ... it's not just a metaphor ... or a lopsided analysis ... it's the way
that technically competent people who are unwilling to bow down to the
false god of the Morsedist quasi-religion are treated by technically
ignorant beepers who can't hold a candle to people like Cecil is talking
about in terms of ability to contribute to the service ...

In fact, I maintain that the, deep down inside, the beepers *know* how
inferior they are to these sorts of folks and they can't stand the thought
of facing the fact that beeping fast doesn't count for squat any more in
the real world, so the reject, mistreat, and drive away people who with
superior talents to try to prop up their own sense of importance.

That's the way *I* see it ... and it's no wonder that people like Cecil's
acquaintance figure hams are a bunch of jerks who can GTH ...
it's exactly because that's how many hams act ...

me.

Yup ... occasionally the goverment screws up and has enough sense to do something right ... the original establishment of ham radio as a service for technical experimentation and self-education and public service communications
was such a case ... they can still see the possiblity of a non-cash return on
investment, but we're not producing under the current conditions ... that's why
we've lost bands and why we'll continue to loose them unless we turn things around and get ham radio back on the charter track ... I know you'll not agree
that that's a primarily technical course, but that's the reality whether you can
see it or not ...

Yup, I'm afraid you are right, and it is embarrassing. I have been
licensed since 1958 (I'm 54) and it was true back then as it is now. I
have to confess to showering at lease daily, and even have clean finger
nails. I don't even smoke! Should I see a doctor?

But on the other side, the Department of Energy has cancelled ALL further EMF exposure studys saying that there is no proof that EMF causes cancer or any other disease. That was a 10 year study. See Newsline #1030 at www.arnewsline.org. Its posted in the ARCHIVE files for some reason.

Let's not continue the lowering of standards in this country. May CW is
not loved by all, but it is not so hard to learn, really. If the hobby
has value to you, learn the code. If we scratch the code, next will be
theory and then will be.....................

Keep the code, it has value as a filter if nothing else.

Hi Cecil,

No he didn't but I would certainly like to chat with the fellow
since I would be interested in his story. As to "lower class hams"
I find the label disgusting and would not entertain the thought.
Ludwig Van was apparently deaf as a post, but his music is still
great...hardly a cripple in the general sense of the word.
The great American Historian, Francis Parkman, was so visually
and physically crippled that he had to fabricate a string matrix
to support his quill pen, yet he turned out some of the richest prose
on America's history and is the envy of numerous historians even today.
His style is so rich that it actually aggravates some historians and
writers who, with complete faculties, cannot come close to his prose.
Read his "Oregon Trail" sometime for a glimpse at real genius and
fortitude even if his version of history may tend to push the
envelope of truth from time to time.

Huh??? Could you please explain how you came to the conclusion
that forcing everyone to learn Morse code "stresses technical
competency"???
(unless you mean stress in the "challenges, strains" sense ... as in
"people waste so much time and energy meeing the code requirements
that they never learn the truly valuable technical stuff necessary to
achieve
technical competency")

```
Integrated Circuit Announcement
-------------------------------

We are pleased to announce the addition
of two unique new IC's to our product lineup:

EDE700: Serial to LCD Interface IC - provides a
serial link(2400/9600 Baud) to most any LCD display.
Offers standard horizontal shifting & new vertical
scrolling, as well as custom character generation.
Data can also be read back from the display serially
for use in limited-memory systems. $15.00 Qty. 1

EDE1400 Serial to Parallel Printer IC - allows serial
data (2400 Baud) to be printed on a standard parallel
(Centronics) dot matrix or thermal printer. Great for
any application requiring hard-copy of data without
PC intervention. $13.90 Qty.1

Both of these 18-pin IC's are great for microcontrollers,
BASIC Stamp(tm) users, or OEM designs & come complete with
a printed datasheet fully explaining their operation & use.
For further information & PDF datasheets, see our web site:
http://www.netins.net/showcase/elab
Look in the 'Integrated Circuits' section.

From: kc5lcl <kc5lcl@deadhorse.ricochet.net>
Message-ID: <3377A33C.1B59@deadhorse.ricochet.net>
Source record: 198489

Hello all,
I have just noticed a problem with my TM733, and I was hoping that someone might have the solution. Last weekend I took a drive to Dallas and noticed that when I keyed various repeaters, the signal strength and audio quality of the squelch tail was about 2 s units stronger than when others were transmitting. I eventually learned that if I momintarily keyed the radio, the "improved receive sensitivity" would last for about 8 seconds. To complete a qso when I was some distance from a repeater, I ended up keying my radio every 10 seconds or so to here the other parties. I know it sounds strange but it is true. Any thoughts or comments are appreciated.

Hi Greg, simple answer - the theory test is relevant - the code test is not.
This is not a Morse Code Service - this is an Amateur Radio Service.

> You say CW is obsolete? Well, in ten years that hard theory test information
> will be, too.

Of course, the theory test will need to be dynamically updated as time passes
just as it has been in the past. The Morse code test is what has stagnated.

> This whole discussion is getting more ridiculous by the second.

Maybe a quote from the President and Board of Directors of the Radio
Amateurs of Canada, Inc. would help: "To suggest that the code be
viewed as a 'filter mechanism' to exclude those unable or unwilling
to learn the code, is discriminatory".

I realize Mas is just trolling, he couldn't possibly be this stupid but Gregs comment makes me wonder.

Wouldn't tracking someone down be left up to the feds? Neither Radio Amateurs or Police would have any ability to prosecute someone breaking a Federal law would they? I mean, they could track the guy down but what would you do then? Can local police take someone into custody over this? What would be the charge?

Hopefully this guy isn't a ham. If he is, he didn't learn enough to be worthy of receiving a license. Must not have studied the test material at all.

>Thats something that'll get you busted REAL QUICK! Give up the
>idea and talk to someone that wants to talk to you. Stay out of
>the public service bands!

Let me ask who would want to talk to such an idiot? Such as he are one reason the cb band is such a mess, and why we have such a problem if we want to mod a radio for outbanding for legit purposes.
I think this idiot is either trolling for flames or is actually that stupid. Not sure which, but I would discourage him from becoming a ham for sure.
He's obviously not smart enough to grasp the material.

Here's another good reason that testing should be beefed up. Memorization can even happen now and then with such as he, she or it, whatever it is. I don't want them sharing radio freqs with me.

We've got enough wannabe cops running around on the ham bands these days.

Nor am I, but I have to agree with Gary ... and bring out the following
point ...

Is not "I don't have time" or "I'm not interested" (WRT becoming and
staying
technically competent) the same sort of argument that the pro-coders decry
when no-forced-code-test advocates say "I'm not interested in the code" or
"I don't have the time to waste on something that I have no desire or
intention
to EVER use." ??? I think it clearly is the same argument ... ONLY the
relevance of the subject matter is at question IMHO ...

The Morse Myths have been rebuffed as technically invalid; many pro-coders
admit that they want to retain code testing "because I had to pass it" (dog
in the
manger attitude), "because it's a lid filter" (demonstrably ineffective),
"because
it shows work, dedication, etc." (irrelevant and inappropriate as a basis
for any
government licensing requirement); etc. In other words, the only reasons
for
retaining Morse testing are based on irrational emotional criteria,
technical
falsehoods, and a grossly exagerated view of the value of Morse towards
meeting

our charter goals ...

Theory testing, on the other hand, is clearly necessary, both to meet the govt's
concern WRT interference mitigation and to assure that the people who become
licensed are, indeed, competent and capable of opearting without harming themselves
or others and have the basic skills necessary to serve as a foundation for meeting
the charter goals and purpose of our service.

> > But I am trying to say that the system we have in place tends to cause people

> > did. In fact it is designed to perpetuate those antique techniques as the highest
> > aspiration of an amateur. That's bad. Must we remain stuck in the Bronze Age
> > of radio forever?

Exactly ... we *are* ("stuck in the Bronze Age of radio") and that MUST change.
The only way to change it is to change the system to encourage the necessary
progress and stop valuing antiquated methods more than modern, progressive
ones ... beeping skills no longer should be the "measure of the ham," rather
we should (return to a state where we) value technical knowledge and skills more
than an ability to beep real fast.

[snipped the "when I was a teenager part]

> Today I have a family and a full-time job.

So do many of us ... so what? So you only have time for the
"play games" part of ham radio, not the "live up to the obligations
that go with the priveleges granted by the license" part???

> Now, I've stated all of
> this so that I can pose this question? There is only 24 hours in the
> day. When in the world do you have the time to experiment with "modern
> methods?" and to spend much time "self-training?"

How about considering that as an integral, necessary part of the
time you devote to ham radio??? That's what it's *supposed* to be
about, after all ...

> I think I have a much better perspective on amateur radio today. It's a
> HOBBY to me. I got into ham radio for the pure joy and excitement of the
> hobby. Because I do treat ham radio has a hobby, I don't spend an
> inordinate amount of time with it anymore. My major goals of amateur
> radio were fulfilled years ago. Today my major focus is on God, family,
> and profession.

Your major focusfor your life is, of course, your choice, and would not presume to find fault with that which you have stated ... however, ham radio is more than "just a hobby" and there are obligations to meeting the goals and purposes for the existence of the service that go along with the priveleges and benefits of holding a license ... things like maintaining
technical competency and doing a bit of public service now and then to "pay back society" for the use of spectrum that belongs to ALL of the public ... we tend to think of the ham bands as "ours" ... that's a common falsehood ... we just have a revokable leasehold on those bands, premised on the idea that we will pay for that lease through meeting the goals and objectives outlined for the service ... self-training and education, public service activities, and contributing to the advancement of the state of the art in radio communications ...

> Morse Myths? What in the world is that? Do I think that real Hams are
> those who know the code? Of course not! That's absurd! Do I think that
> Morse code is superior to modern digital modes of communication?
> Certainly not! Do I think that Morse code is antiquated as you
> suggested? Well, it's antiquated in the sense that it's an old mode of
> communication. Is it obsolete? Certainly not! If it were, few folks
> would be using it.

While none of us who advocate the elimination of code testing have proposed (in fact, we have universally disavowed any support for) a ban on the *use* of
Morse by those who voluntarily choose to do so, it is a fact that *relatively*
few people *are* using it ... even the ARRL's survey of coded, member licensees
(clearly a more pro-code population than the large majority of hams who are NOT ARRL members) shows that less than 40% of those surveyed EVER use Morse ... so the facts are that, even with government-mandated welfare/life-support,
Morse is a mode in decline and it is used by only a minority of licensed hams.

> I contend that Morse code is still an effective means of communication.

So is a two tin cans and string, if you're willing to live with the limitations
that mode imposes ... however in terms of all of the other modes available, Morse is THE worst text encoding/decoding scheme and imposes the most severe restrictions on the speed, efficiency, and quality of content exchange.
It may do for the "UR 59 in xxx PSE QSL TNX FER QSO CQ CONTEST"

type exchanges, but it falls *far* short of better methods in any
meaningful
context ...

> Does the Morse code test requirement prevent one from
> experimenting or advancing the current state of communications? No.

Only if one is willing to constrain one's interests and contributions to
the limitation of the VHF/UHF bands ...

> There is lots of room in the VHF/UHF spectrum for that. For those who
> wish to learn the code, there is also some room on the HF bands.

Once again, those who are "not white enough" (can't/won't beep fast)
must "go to the back of the bus."

> Gary, I'm in favor of keeping the Morse code test requirement for a
> couple of reasons:
>
> * Among the amateurs on the HF bands, it's still a popular mode of
> communications.

Popularity contests amongst self-selected populations such as currently
licensed, coded hams are not a valid criteria for establishing government
regulations that affect all prospective participants ...

> * Despite what you and others contend, I see no evidence from the
> crowded HF bands that amateur radio is dying.

If you think the current situation constitutes "overcrowding" you have no
concept of spectrum management and the level of spectrum occupancy
expected of the commercial services with whom we must compete for
continued access to "our" bands ... they're FAR ahead, where we used
to lead ...

> Futhermore, I don't want the
> HF bands to become more and more congested. The Morse code test
> requirement seems to me to be an effective means of controlling that
> congestion.

That is a typical "stuck in the past, things can never change or improve"
mentality response ... first, "our" bands are not "congested" by any
reasonable
comparative measure ... second, the answer to resolving congestion and
mutual interference problems is NOT in restricting the number of
participants,
but in aadopting and using more effective modulation and coding techniques
and channel access protocols that permit far more efficient utilization of
our
spectrum at far higher capacities ... this is NOT "rocket science" ... it
is
easily within our technical and financial grasp ... in fact, both Gary and
I

have independently postulated modern systems that would "look and feel
like" OOK Morse, but would easily support tens of thousands of
simultaneous,
20 wpm Morse equivalent QSOs IN THE SPACE OF THE CURRENT 20m
CW/DATA SUB-BAND ... with far less (virtually) zero apparent interference
for those who wish to communicate, rather than face challenges ... for the
latter,
the same DSP processor that does the mod/demod could easily add in whatever
level of realistically simulated channel impairments and interference you
desire.

> Is the Morse code test requirement fair? I think so. The vast majority
> of humans can learn the code. Only a small minority cannot.

Would it be "fair" to require all applicants for a regular driver's license
to
pass pass/fail test in saddling and riding a horse? Only a small minority
would be unable to master this antiquated, irrelevant skill ... it's the
same
thing ... but I'll bet you'll think it doesn't make sense to require that,
right?

> Would
> eliminating the code requirement and increasing the difficulty of the
> theory be more equitable? I think not. Learning the code doesn't require
> above average intelligence and maybe not even average intelligence.
> However, increasing the difficulty of the written exam would eliminate a
> far greater number of people from the hobby.

The theory is, at least, relevant ... now bear in mind that we're not
talking
about forcing everyone to pass anything approaching an EE level test ...
even today's extra falls FAR short of that ... all we're saying is that, by
it's charter goals and purpose, ham radio is supposed to be a primarily
technical pursuit and it is both reasonable and necessary to require
applicants for a license to demonstrate an appropriate level of technical
knowledge and proficiency to show that they can, at least, operate without
causing harm to themselves or others or generating undue interference to
other services through their ignorance ...

>
> I never considered learning the code as my highest aspiration as an
> amateur. Nor does the requirement imply that.

It certainly does ... the entire thrust of "Incentive (to pass faster and
faster Morse tests) Licensing" is to elevate Morse proficiency to the
status of the highest measure of the "worth" of a ham and to reward
that "worth."

> International on the web and add a few more hundred to the list, to start.

From the http://www.nocode.org/ opening page:

"No-Code International is a new temporary organization
dedicated to the abolition of the Morse code requirement
for all classes of Amateur Radio license. We intend to
disband the organization as soon as the Morse Code
requirement has been eliminated in all English-speaking
countries."

In a quick scan of their web site, I find no references to
eliminating, banning, or restricting the use of Morse Code by
radio amateurs. The debate is about mandatory Morse Code *TESTING*.
This keeps getting twisted into something else by certain members
of the "Pro-Code Testing Party"(tm), presumably as an attempt
to drum up support of those that otherwise wouldn't support their
position.

If CrACKeD is truly in favor of eliminating Morse Code and not
just the mandatory testing related to it, I believe he stands
nearly alone in that stance. Certainly No-Code International
does not advocate that position.

Hello!
Help me to be disassembled, that means the term Wind Load (Wind Loading) in the characteristics of aerials.
For example CUSHCRAFT AP8A has Wind Load 0.16 m, and the aerial CUSHCRUFT R7 has Wind Load 2.25 m. Thus both aerials have almost identical electrical parameters.
Thank you!

>are superior to OOK Morse under severe aurora conditions?

You can think of aurora as just a severe case of multipath with a bit of
doppler spreading thrown in for good measure. The technique which
works best against multipath is spread spectrum. Because the symbol
energy is spread over a large number of frequencies, and the instantaneous
multipath only forms nulls for some of them, the effect of multipath is
averaged out. The doppler spreading is more of a nuisance, and makes
coherent detection difficult. So you use incoherent techniques and
integrate symbol energy in the detector.

Direct sequence spreading is probably the best method to use for
this. Fast frequency hopping would work too, but the slow hopping
found in most available equipment wouldn't do because the dwell
time is longer than the multipath fading time and it wouldn't "dodge
the bullet". Note that you want a symbol time long with respect to
the fading time, but you have to spread that energy over several
frequencies during each symbol to avoid the effects of the multipath.

Lacking ability to use SS, wide shift FSK is your second choice.
With a properly designed slicer, wide shift is tolerant of multipath
selective fading. (That's why the commercial RTTY boys still use
wide shift on HF even though amateurs went to narrow shift.) Fairly
loose filters should be used in the demodulator to accomodate the
doppler spreading. And the symbol rate should be low so that
integrate and dump averaging can be used.

You can also go the other way. By using very high data rates, and FEC, you can send *between* the fades, and the doppler will be too slow to cause loss of coherent lock. This isn't a good weak signal technique, however, signals have to be strong to accomodate the high data rate. Note that Dale has now included FEC in the new 56 kb RF modem, so it would be a candidate for this use.

Strong FEC will be benefical in any case. You could use Karn's software routines (on his webpage) and do the signaling with just the computer's sound card as a wide shift FSK source.

Hi, Carl.

I don't mean any disrespect toward you or others who would like to have the testing of Morse code eliminated. However, I stand by my reasons for preserving the code testing requirement:

* Among the amateurs on the HF bands, it's still a popular mode of communications.

* Despite what you and others contend, I see no evidence from the crowded HF bands that amateur radio is dying. Futhermore, I don't want the HF bands to become more and more congested. The Morse code test requirement seems to me to be an effective means of controlling
that congestion.

Best regards,
Lindsay Foster

>methods?" and to spend much time "self-training?"

It doesn't take that long, and you don't have to do everything at once.
I probably spend less than 2 hours a week reading up on new techniques.
I do a lot of that during "downtime", IE while I'm waiting for something else
to happen (like waiting for a compile to complete for example). If you look
at your day, I expect you'll find you have considerable down time too.

Like most amateurs, my ham interests change from time to time. I only
concentrate on the areas of current interest at any given time. Lately that
has been weak signal digital HF methods. A couple of years ago it was
high speed UHF methods. Etc.

Finding the time at the bench is the hardest part. When I'm hot on the
trail of a new idea, I can still pull all nighters, but other things do press
my time. I understand that you can't make amateur radio a full time
activity. One thing I *don't* do is vegetate in front of the TV. My set
hasn't been turned on since the Gulf War.

>Gary, I'm in favor of keeping the Morse code test requirement for a
>couple of reasons:
>
> * Among the amateurs on the HF bands, it's still a popular mode of

> communications.

Yes it is, so is SSB and PACTOR. I don't expect *every* ham to do PACTOR.
I don't expect *every* ham to do SSB. Why should I expect *every* ham to
do CW? Each of us has our own interests to follow. Pick any operating mode
and you'll find more hams to contact in that mode than you can work in a
lifetime.

> * Despite what you and others contend, I see no evidence from the
>crowded HF bands that amateur radio is dying.

Look hard at the demographics. Our HF licensed amateurs have an
average age pushing 60. Average life expectancy is 72. In 12 years
a large number of our HF amateurs are likely to be SK. We've got a
problem here, and it is only going to get worse. You may not see the
effects today, but you will. We need to act *now* to head off this
problem.

>Futhermore, I don't want the
>HF bands to become more and more congested. The Morse code test
>requirement
> seems to me to be an effective means of controlling that
>congestion.

A fairer means would be a lottery. But I don't accept that HF is overcrowded.
That's predicated on *current* operating methods. In 1934 the ARRL declared
HF could only accomodate 12,000 amateurs. How many do we have today?
With newer technologies and operating techniques, we can accomodate many
more amateurs on HF than we have presently.

I few months ago I posted a technique, totally feasible with today's technology,
which would accomodate *4.5 million* amateurs in one 200 kHz HF segment,
each getting an average throughput equivalent to a 20 WPM Morse contact
with *no mutual interference*. We can do that today if we wish. It doesn't even
begin to approach the Shannon limit. (It uses the common code book technique.)

>Is the Morse code test requirement fair? I think so. The vast majority

>However, increasing the difficulty of the written exam would eliminate a
>far greater number of people from the hobby.

I doubt Morse operators are going to appreciate being referred to as
having less than average intelligence. :-)

I would suggest that there are few amateurs on the downside of the
bell curve of intelligence. If for no other reason than that they wouldn't
have either the money or the leisure to pursue amateur radio if they
weren't moderately competent and successful. And none of us are
asking for EE level exams, just to make them reflect what an amateur
needs to know to *do no harm*. That is, unfortunately, quite a bit stiffer

than current exams, but it is a necessary and sufficient level for the exams to serve their intended purposes (which *isn't* rationing).

I also doubt your statement about the ease with which the vast majority of humans can master Morse at relatively high speed. To put it bluntly, we don't know what percentage of the population can master Morse at 20 WPM. We do know that 93% of the US population hasn't mastered Morse *at all*. We know that less than 10% of *amateurs* have done it, and they're self-selected for Morse ability, IE until recently if you couldn't do Morse at all, you weren't an amateur.

And we know that the only significant difference between Advanced and Extra is the 7 WPM between the 13 WPM passed by Advanced and the 20 WPM passed by Extra (the Extra written is trivial). But Extra is our smallest license class while Advanced is our second largest (behind Tech). There must be a reason why the majority of Advanced haven't upgraded to Extra, and I strongly suggest it is the Morse test.

I don't hold myself up as typical, but it took me 6 weeks of intense effort to pass 5 WPM, and another 13 months of better than 2.5 hours a day of on and off air practice to reach 13 WPM. I was a kid and had the time, and the bull headed stubbornness, to do it. I doubt many people having the difficulties I had would have done so. I know *I* wouldn't today. I've never made 20 WPM, even though I was net control for the KTN for two years, passing books of traffic via Morse every day. It just isn't going to happen for me. I've accepted that after 34 years as an amateur I'm not going to be an Extra. (Don't cry for me, Advanced allows me to do everything I want to do in amateur radio.)

>I never considered learning the code as my highest aspiration as an
>amateur. Nor does the requirement imply that.

It certainly does. If you look at the license class structure, the main differentiation is Morse speed for every class step except the one from General to Advanced. That implicitly tells every amateur what is considered important and what is not.

Hello,

Is there anyone who could possibly email me the schematics or a component diagram/list for the LM3914-based mini SWR meter from QST Feb 97? I only have the layout diagram, but no component information. The full articles are not available on the net, and I don't know how to get QST here in Germany.

Thanks in advance!

>Condition of Equipment; 3 Troop Morale. No single point was more
>important than the other.

The three most important things in maintaining the morale of troops is to make
sure the mail and chow arrive on time, and making sure the troops have confidence
in their leadership to not get them killed unnecessarily. Chanting and grunting

in unison does nothing for that. A soldier needs confidence in his equipment and in this training, but chanting and grunting doesn't do that either. Espirit de Corps is vastly overrated. In the terror of a firefight, a soldier reacts as he was trained. If he was trained properly, he'll react properly. He doesn't have time for anything else. Marching and chanting is for REMFs.

> What we see happening in our amateur hobby service and a primary
>reason for its decay is a form of anomie brought on by extremely
>poor morale caused by an ongoing lack of self esteme.

If low self-esteem is a problem, it is because amateurs don't have confidence in their abilities, training, and leadership. It is certainly true that a disturbing number of amateurs today lack ability, are poorly trained, and can expect no trustworthy leadership from Newington. What few skills they do possess are very rapidly and obviously being obsoleted. This is a problem, but primitive rites aren't the answer to it.

Q: How many news group subscribers does it take
to change a light bulb?

A: 1,331:
1 to change the light bulb and to post to the news
group that the light bulb has been changed
14 to share similar experiences of changing light
bulbs and how the light bulb could have been
changed differently.
7 to caution about the dangers of changing light
bulbs.
27 to point out spelling/grammar errors in posts about
changing light bulbs.
53 to flame the spell checkers
156 to write to the list administrator complaining about
the light bulb discussion and its inappropriateness
to this news group.
41 to correct spelling in the spelling/grammar flames.
109 to post that this news group not about light bulbs and
to please take this email exchange to alt.lite.bulb
203 to demand that cross posting to alt.grammar,
alt.spelling and alt.punctuation about changing
light bulbs be stopped.
111 to defend the posting to this group that we
are all use light bulbs and therefore the posts
are relevant to this mail list.
306 to debate which method of changing light
bulbs is superior, where to buy the best light
bulbs,what brand of light bulbs work best for this
technique, and what brands are faulty.
27 to post URLs where one can see examples of
different light bulbs
14 to post that the URLs were posted incorrectly, and
to post corrected URLs.
3 to post about links they found from the URLs that
are relevant to this grouph makes light bulbs
relevant to this group

33 to concatenate all posts to date, then quote
them including all headers and footers, and then
add "Me Too."
12 to post to the list that they are unsubscribing
because they cannot handle the light bulb
controversey.
19 to quote the "Me Too's" to say, "Me Three."
4 to suggest that posters request the light bulb FAQ.
1 to propose new alt.change.lite.bulb newsgroup.
47 to say this is just what alt.physic.cold_fusion
was meant for, leave it there.
143 votes for alt.change.lite.bulb.

Citizens Band Channel 9 is probably as close as anyone is going to get
on a situation like this. It would be legal to transmit here, but
ONLY if it is a bonafide EMERGENCY.

Police are too busy to chat while on duty. Catch them at the donut
shop and talk face to face if you must.

Tom Sharples wrote:

I read your post. We have had the same problems with the
"Oregon Region Relay Council" (ORRC) here in Oregon. I was the
target of one attack about 2 years ago.

MY elected representative (the guy who is/was SUPPOSED to represent
my interests in the council) spoke with MY supervisor/employer
& told him "if you want to be successful with ORRC you had better
not associate with John" (me). My employer was a ham, had a repeater, &
was a coordination council board member.

Then I suddenly found out that my 2 meter repeater coordination had been
"rescinded"!!!!!!! The coordination council stated that they did not
need to follow the established policy of de-coordination because they
did not de-coordinate me, they simply resinded my coordination!!!!
(de-coordination would have required a hearing & official 30 day notice
by mail, etc)

I spoke with my sister who is an attorney about my coordination being
rescinded & my representative making the above statement to my
employer. She told me to go after them. At first I did, then I
backed off because I was really busy traveling at the time. So,
I let the 2 meter coordination issue drop & attacked about the
representative
speaking to my supervisor.

I moved the output of my repeater to 147.435 Mhz, & continued to use the
old input of 146.400, which is done in California.

At that time a had several little hell raisers on my repeater. The
initial thing that drove the council to act was because the owner of
the repeater on the same frequency 120 miles away on the opposite
side of the coast range bitched about the content of my repeater &
that we changed the call sign weekly.

He stated that could not hear my repeater from his location. So
he went to his hill top where he could
hear my repeater. He installed a receiver on the repeater output,
then hooked it up to a microwave link which was connected up to his
house for control purposes.

1. Why did he care that we changed the callsign??? (It rotated between
members of the group)

2. He complained that my repeater (which came on the air after him)
was interfering with his. If he had to go to those extremes to hear
my repeater then it shouldn't be considered.

I also have repeater coordinated in Western Washington & Iowa, I have
NEVER had any problems or seem these types of activities
with those councils.

Our local council in Oregon "ORRC" has been plagued by poor management
& leadership for several years. THere are a few good members on the
board trying to help, but the majority are fools with a hugh chip on
their shoulder.

I personally spent 4 years (2 term) on the council from 1990-1994,
unfortunately, I learned a lot during that time that didn't need
to be learned!!!

Even simple things like trying to get out a newsletter is like pulling
teeth.

Our council has a VERY difficult time just getting out proper mailings
of
meeting notices. There have been several meetings which have had to be
canceled due to notices not getting sent out (either properly or at
all).

The ARRL CAN'T & WON'T do anything.

> "This is insane! As you said, they are a frequency coordinating body
> only, not a morals police force....Please keep me posted on this.

Common thing that the Oregon coordination council forgets also.

> "...At the last meeting where narcc president Don Smith w6nkf

The Oregon council does that too.

> "Maybe we could sell tickets to the next narcc meeting/circus."

We should try that up in Oregon

> "...I have had problems with ... the 440 coordinator. He seems to be
> very quirky...(For lack of a better term.) I think he has a "God"
> complex."

Common problem with many coordinators.

> users in the Phoenix, Arizona area.

Eric tried to cause problems with me on rec.radio.scanner almost
a year ago then on this NG only a few months ago. He is an idiot &
a fool & most know better than to trust him.

You hit the nail on the head about the "childish games". He does those
all the time. Infact, his favorite thing is to forge posts.

I will try to dig up one if my examples of his forging &
attach one here if needed.

Eric,

If you are having a problem with e-mail orionating from America Online, I suggest that yoy send a letter (e-mail) to tosmail@aol.com and file a formal complaint. TOSMAIL is Terms of Service and tosmail is their e-mail address. AoL has a team of attorneys and investigators that look into such complaints to be certain it is an AOL member causing the prolem. If AoL is rthe source, they will act on the ecidence that they develop -- not on your alleged complaint. If they find it is not an AOL subscriber they will so inform you.

They are exceedingly thorough and loose few that they decide to prosecute -- as the guy serving 5 years for creating a program to circumvent their access system recently found out.

I have to add that it is not uncommon for there to be multiple users of AoL with the same screen name. During the recent crisis expansion and addition of extra servers a lot of duplicates occurred and a good number are still there. There could easily be several frankburns on AoL --and from what I have seen in postings on various AOL boards -- there definately are.

I is obvious that you have no idea as to the operation of AoL. I do, and strongly suggest that you be 100% certain that you are accuising the anyone based on e-mail here on the "uselessnet." It is easy to say "sue me" but once you start shelling out 10's of thousands of dollars to lawyers to get nothing tangable in return -- you realize it would be a lot easier to go the proper route in the first place. I know that one from personal experience. Also, most homeowners and renters insurance policies will no longer pay costs of such cases so you put your entire future earning and you entire being n the l;ine.

In this case, it would probably make morse sense to fileb a formal complaint to AOL asking that theyt back-trace all mail posted to USENET from the names you claim are assaulting you. If they are from legitimate AoL users, then you have your proof and AoL will act for you. If not, then you are out of luck.

Best of luck in your quest

Bill Pasternak, WA6ITF / Newsline On-Line

> test requirement seems to me to be an effective means of
> controlling
> that congestion.

I disagree as an engineer with knowledge of spectrum management and the
loads carried in other services that our bands are "congested" ... if
anything,
they are woefully underutilized ...

A far better thing would be to eliminate the source of the perceived
congestion
by utilizing better techniques ... Gary and I have both independently
proposed
techniques that could easily handle the entire world ham population at
20wpm
equivalent QSO speeds in a 200kHz HF band segment (with NO mutual
interference) ...

Message-ID: <337794B2.28CAD243@nm-us.campus.mci.net>
Source record: 198563

Hello,

I'm studying the code and I'm curious if Code Quick can
really improve one's recognition speed more efficiently than
through brute-force practice. Have any novices used it
to upgrade to general or generals to advanced?
Has anyone compiled a FAQ about Code Quick?

Thanks

Randall, KC5OOE

>technology. There is more than just how much data can we transmit.
>There is more than the code, no-code debate. The wonderful thing about
>amateur radio is there is a place for all types of interest. If you like
>and enjoy digital modes, then do them, if you like CW, then do it, if
>you like contesting, then do it, if you like experimentation, then do
>it, if you just want to talk, then do it. There will never be ONE
>single reason for the Amateur Radio Service.

I don't disagree with you, Steve. As you know, I spend a good bit of
my time on FM voice, talking across town, I operate satellite, I operate
HF, I participate in foxhunts, etc. These are valid things to do, as are
all the other things that hams like to do, even operating CW for those
who enjoy that.

But in the same breath, we need to move the service forward technically
beyond the methods of 50 years ago. That's mandated in several ways
by our charter. This doesn't require us to abandon methods we may enjoy.
But it does require a change in attitude in the ham community. There is a
strong current of Ludditism in amateur radio today. Not only do these people
not want progress for themselves, they want to make sure no one else
progresses either. This dog in the manger atitude has crystalized around
the Morse testing issue.

Morse testing, particularly as implemented by Incentive (to pass faster
Morse tests) Licensing, has been used as a way to implement this dog
in the manger business. And it furthers the cause of the Luddites by
making the highest aspiration of an amateur the passage of faster and
faster Morse tests. That has a pervasive influence on the amateur
community.

Of course that isn't the only problem we have. We also have the ARRL
fighting to turn back the clock at every opportunity. A recent case in
point is the ARRL activity to impede spread spectrum work. They opposed
TAPR's STA, and their own rulemaking petition is unnecessarily restrictive.
The whole business with the St. Louis meeting and the creature the ARRL
is forming out of it is another case where protection of the status quo and
grasping for more control over amateur activities has served to impede
amateur modernization. And then there's the ARRL proposal to turn back
the clock in amateur licensing. Instead of undoing the damage of Incentive
Licensing, they want to return to parts of it we had managed over the years
to dismantle.

These things all tie together with the depressing demographics of amateur
radio to paint a grim picture for our future. We can turn things around, but

we are running out of time to do so. In another decade, our demographics
are going to catch up with us, and if we can't show we're fullfilling our charter
goals in better fashion than we are now, there's a very good chance amateur
radio will simply go away because government will no longer be able to
justify allocating spectrum for our use.

I know that well, Dave. Thanks for an opinion, anyway. I posted "AR-3030", not "7030". Also, I expect a little more objective data, not emotions. I would like to get some facts from veteran hobbyists who have had a chance to "play" with the R72 and the 3030 (a 1994 AOR model).

2750. Rude Repeater Operators

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-12 00:00:00 UTC
From: Dan <Radiohead@ivory.ct.edu>
Message-ID: <33779B1F.5322@ivory.ct.edu>
Source record: 198570

I received this in my e-mail. Anybody have a clue where it came from?

dan
****

It has been brought to my attention that you wish to donate some wimpy
funds towards the operation of the ass kicking 145.39 repeater. I
am surprised that you would want to do so, since in the past all you
have done is to sit on your fat ass with a microphone in your hand
pissing and moaning about how crappy the machine sounds. What in the
hell would make you change your mind? Did you find Jesus or something?

But if you really want to part with some of your "fixed income"
funds from your last welfare or SSI check, I suggest that you take a
moment and think about all of the ass breaking hard work I have done to
keep the 39 flame thrower operational.

The machine has been on the air for 10 years now, which is some
five times longer than you've ever had a no code freeloader ham
license. In those 10 years I have spent well over $7000 of my hard
earned cash to keep the thing on the air so some low life, trailer park
ham like you, can call his wife to see if he needs to get bread, milk,
and tampons on the way home from work.

Of that $7000, $400 of it was spent on a new repeater antenna which
I installed BY MYSELF. I had to do the install alone because none of
you wanted to come out of your warm homes and haul your ass up the
cold mountain, much less up a tower with a fucking 30 mph wind
blowing. But did that stop you from giving advice, hell no! In fact
you were all too
willing to tell me how I SHOULD be doing the installation; how I SHOULD
be running the feed line and how I SHOULD be bolting it to the tower.
In fact, the number of half assed suggestions were so plentiful on the
air, that I had to postpone the install by 20 minutes until every one of
you self proclaimed experts had his say. Only then could I turn the
damned machine off and change the antenna.

So do you still feel it in your heart to donate moneys towards the
machine that is only one of 20 other machines that you could take your
QSO to, (much less to mention the dozens of simplex channels you could
be using)?
Do you still wish to support the machine that you can use to tell
your best buddy all about your latest gall bladder operation?.....in
great detail?......where other hams from Boston to Montreal can listen
in?
If so, well good......keep reading then.

The machine is a private machine owned entirely by me, and run with my philosophy in mind. What is my philosophy? It is that I don't want to hear about your piss ant little problems about having to drive across the state line to save 5 cents on the price of Sunday's newspaper. I don't want to hear about how your bank account is so low that you can't donate to the local cancer society, but then have to QRX to go into the store to by a $3 pack of cigarettes. I just don't want to hear it. But does that ever stop you, no way in hell it does. You just have to announce your callsign no matter how long you'll be while driving in the car. Even if it's just around the corner to help your cousin install a new hard drive is his multi-media PC, that by the way, you built for him out of parts you bought at a RADIO hamfest. Note that it was a RADIO hamfest and not a damned computer show.

Well now, you still want to donate? Still want to part with about less than .1% of what I've spent to keep you in touch with the world at all hours of the day and night? No matter what the weather? Even when your entire town looses electricity and your HT is your only means of telling every body that you must QRT to save the battery? Or when the electricity has still been off for 12 hours and you just have to ker-chunk the machine to "see if it's still there"?

If your answer is "YES!" then I don't want any of your fucking money! hy? Because if I take it, you WILL expect me to owe you something. Or maybe that your club's two bit swap net should be allowed on the machine before some other net. Well it just won't happen! I'll continue to run MY machine MY way and if you can't get into the thing with your new 2 picowatt HT while in your sub-basement, I just don't give rat's ass! I don't want to talk to you anyway! 73 OM.

>expended massive effort to master code, even worse for those who simply
>could never do it.

So what about the people that have a hard time with theory? I know people who had an easy time with the code but a bear of a time with the theory. Why shouldn't they be crying "get rid of the theory and make the code tests harder"! You say CW is obsolete? Well, in ten years that hard theory test information will be, too. The stuff the electronics schools were teaching ten years ago about the 8088 processor is ancient history now.

This whole discussion is getting more ridiculous by the second. Who can sound smarter than whom....Who can use the biggest words...The anti-code people won't listen to anything the CW people are saying.

But then, what do I know? I'm just a stupid Extra. At least that is what it sounded like someone was making reference to. Whew!!!!!!!

2755. SACMARC Charter Meeting

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-12 00:00:00 UTC

Strategic Air Command Memorial Amateur Radio Club

Charter Meeting: Wednesday, June 25, 1997, 7:30 PM

Bank of Bellevue, Galvin and Harlan Rds., Bellevue, Nebraska

A new SAC-related organization is forming in Bellevue (near Offutt AFB). It is the Strategic Air Command (SAC) Memorial ARC. It is a collaboration among active-duty personnel, veterans, members of the local amateur radio community (including the Bellevue Amateur Radio Club), and members of SAC-related historical organizations. Its purpose is to preserve USAF and SAC communications and amateur radio history, such as via the preservation and use of historical callsigns (K0AIR/K0GRL), and working with the SAC museum to put together communications history exhibits.

All interested parties are welcome to attend our charter meeting. The meeting agenda includes ratification of our Articles and By-Laws, the election of officers, and planning of future projects. All positions (especially Secretary and Treasurer) will likely be wide-open and all qualified candidates are strongly encouraged to run for any office. Dues for membership will be only $5/year, and future meetings will be quarterly (last Wednesday of December, March, June, and September).

For more information, contact Paul Schleck at (402) 291-6176 or pschleck@novia.net.

If you are unable to attend this meeting (such as because you live too far away), but are still interested in membership, you may request membership information by sending a business-sized, self-addressed, stamped envelope to SACMARC, P.O. Box 1292, Bellevue, NE 68005-1292 (Details such as dues, membership applications, and membership terms are not likely to be finalized until the June 25th meeting, so please do not send money or applications for membership at this time.)

Gary, you are so blinded with emotional hatred that your rants have
become just a series of take-a-ticket sermons and are frankly boring
as hell and have not brought a single positive thought to the table.
All the name dropping in the world and the ponderous Appeals to
Authority are nothing more than hollow rants as well.

The Center for Amateur Radio Learning (C.A.R.L.), is a hands-on amateur radio station located within the Network Hall at the new Arizona Science Center.

We offer Arizona Science Center visitors an opportunity to talk on the air using state-of-the-art amateur radio equipment under the guidance of licensed volunteer operators. At this time we are operating VHF/UHF, HF and packet radio.

You can visit our station, W7ASC, daily from 10:00am - 5:00pm. The Arizona Science Center is located at 600 E. Washington in Phoenix, Arizona. Call 602-716-2000 for Arizona Science Center information. For information regarding the W7ASC radio station call 602-716-2082.

Visit C.A.R.L. online at http://www.w7asc.org/

Back in Euclid Ohio, the police were on 423-424MHZ. This falls
within the
75cm amateur band. So this could be done without any special mods since

they are in the ham band (420-450MHz) last time I checked.

Seriously, it would be nice for the PDs one channel for hams, etc to
contact the dispatcher legally. They would still have five or six
others for car to car, tactical, drug busts etc. Should be one
frequency near the ham bands and standard from city to city, kind of
like CB channel 9 was supposed to be.

-Jim

o who it may concern
About 2 years ago some turkey dicided to go ape shit on the local police
chanel he sounded drunk , but went on and on, cursing.
As a ham operator I went right away to monitor the mobile side of the
frequency to find out if this individual was close to my area.
I'm sure that a lot of other ham did the same thing! there are a lot of
people out there who would help the cops to clear up their chanels if
help would be needed. No to mention the fcc or doc with their fancy toys
could track you down faster than you think!!! So make the right choice !
Just forget about it, it may be a cheap trill for you but if you get
caught youll be sorry!!!!!

And that shouldn't be a surprise. Even in the 30s it was already recognized
that machine methods were superior to manual Morse. And Shannon showed
why in 1948.

>>The same principles applied by the DSN can also be applied to amateur HF operation.

>paths).

The advantage scales with the log of the square root of the speed
change, see the equation above. That's an inherent consequence
of the integration being done on the symbols.

>>Much of the advantage of modern technique lies in the use of a uniform code and
>>consistent timing. Hand sent Morse fails badly on both counts. Therefore it is not

>since the a.g.c. settings could be constantly derived.

F1 also has the large advantage of allowing you to transmit all 5 of the
Morse symbols instead of just 2, IE the 3 space symbols can be transmitted
as well as the dot and dash rather than letting the latter be *inferred* against
the Gaussian noise. That confers a large decoding advantage.

>It is also interested to note that many manual Morse supporters think
>that a bad fist is a virtue. A more appropriate thing should be to

>least require them to use a keyer of some type. The problem is that

>"bad fist" has not been formally defined and it would be very hard to
>objectively measure it in a test situation.

Well, yes it has. The International Code has very precise timing specifications.
Any deviation from that timing should be considered a "bad fist". If the ARRL
has its way, and a sending test is reimposed, the test should require use of a
machine decoder set to reject any code sent with less than perfect timing for
the speed being tested. That would remove any question of bad VE judgement
calls by making the test objective and uniformly applied.

Yes, this is exactly true. This ritual hazing has been harming the
service for decades now, and it is only getting worse as time passes

and Morse testing becomes more and more irrelevant to the goals
of the amateur radio service.

i just got my nocode ticket and was wondering if anyone can suggest a
good handheld or moble 2m radio.

also, are 2m / 440 mhz dual-banders worth the extra cash.

thanks

Well, if it is that popular, why does it need a test? Things that are popular don't need to be forced down people's throats. It is the unpopular but necessary things which need force to be applied to coerce people to go along. Since you say Morse is so popular, and it certainly isn't necessary, then testing is rather absurd wouldn't you say?

Gary, I sometimes address these arguments on a QWK BBS net, and one of
the fellows brought up the problems of operating in severe aurora
conditions. As you know, distortion can be so severe that SSB is
useless, and even CW is reduced to a harsh buzz. The ear can still
copy this fairly well, but I'd think it would play havoc with any
computerized transmission system. Do you know of any methods which
are superior to OOK Morse under severe aurora conditions?

*** Say Hello to cops (2) ***

Thanks for your responses to *** Say Hello to cops !! *** !!

OK, now I am interested in transmitting the signal legally.
(I was joking in the very first message !!).

One of the options what I heard that you would be able to talk with
the cops legally if you would work at Police detachment, of course.
But... this seems impossible for me at this time.

are there any licenses that allow you to transmit in the public
service bands ?

say something like volunteer safety patrol ? is it possible ?

any ideas are appreciated.

thanks in advance :)

In article <33754E7F.58E3@en.com>, Terry Morris <kb8amz@en.com> wrote:
>Thats ridiculous, but maybe not for you. If a person spends 2 fifteen
>minute sessions per day for 3 - 4 weeks that person should be proficient
>enough to copy 20 wpm. There is a stipulation though. The person must
>WANT TO LEARN the code.

Most CW courses recommend about a 2-4 weeks to get to 5WPM from 0,
another 1-2 months to get to 13WPM and another 1-2 months to get to
20WPM. This is *average*, some people are faster some are slower.
A FEW WON"T MAKE IT AT ALL. The only course I ever heard of that
got to 20WPM in one month were the kind given by the military
where the trainees lived Morse 8 hours a day. If you succeeded
and were this quick, good for you. Don't presume that anyone else
who doesn't match your performance in this area doesn't "want" to.

People fall on a normal (gaussian distribution, i.e. bell) curve
in virtually all endeavors. Someone with an IQ or 60 may never
learn to read, no matter how much they "want" to. Someone with an
IQ of 160 may never run a 4 minute mile, no matter how much they
"want" to. Setting a performance level at the mean point of a
normal curve says that 50% of the people will find it within their
capabilities. Setting a performance level one standard deviation
below the mean point of a normal curve says that 84% of the people
will find it within their capabilities. Setting a performance
level two standard deviations below the mean point of a normal
curve says that 94% of the people will find it within their
capabilities.

But whether the performance level is set at +1, 0, -1, -2, -3,
or more standard deviations, the distribution *guarantees* that
there will be *some* who will find it outside their capabilities
regardless of their "wants" or desires. This is the fallacy and
lie of the "incentive" licensing system. "Incentive" implies that
it is "only" a question of desire and motivation to move up the
ranks. But when a performance measure is used (versus time in
grade, effort put in, tasks performed, or other cumulative
measure) there will be some that fall out because they are not
capable of meeting the performance measure. This is *guaranteed*.

I am not aware of any research which establishes where the mean
point for code ability of the *population* (not HF hams or
telegraph operators - that selects the group of people who passed
a code test) falls within the range of code ability. But I
seriously doubt that 93% of the population could learn code at

20 WPM, if only they would "want" to. Considering that most observers believe the Extra theory test to be less hard than the Advanced theory test (which is isn't terribly hard as it is), the main thing stopping Advanced hams from becoming Extra hams would be the 20WPM code test. As the Advanced and Extra groups are roughly equal in size, then the only difference between Advanced and Extra must be because they don't "want" to, according to you. The level of ease you imply to work up to 20WPM (by a group that is already at 13WPM) and the number of Advanced who have chosen not to "want" to be Extra just doesn't match up.

Let me make it clear that I don't necessarily have a problem with linking performance measures to privileges. But it is wrong to assume that anyone can meet a performance measure, if only they "want" to. Using a performance measure system means that people *will* be filtered out at each level, based on lack of "want" *or* lack of capability *or* both. So long as there is no fraud and there is *substantive* reason to be selective, that is OK.

> You're a quitter; a loafer; a whiner; a procrastenator. If you
>continue to make excuses you'll never feel at ease at 20 wpm.

You are a self-centered, omphaloskeptic twit with no understanding of the normal human condition. What you can do anyone else can do? You must have a pretty low opinion of your capabilities. You also just implied that any of the 100,000+ Advanced class licensees is a "quitter; a loafer; a whiner; a procrastenator (sic)" because they didn't "want" to demonstrate 20WPM. Hey, you could spell perfectly, if you only "wanted" to. You could play a course 10 below par just like Tiger Woods, if you only "wanted" to. Every one of the Olympic athletes could have taken home a gold medal, if they only "wanted" to.

>Practice...Practice...Practice, you'll get there, someday, SOON
>if you REALLY want to pass the test. GOOD LUCK!

That's an echo of the joke about getting to Carnegie Hall. Not everyone who "wants" to can get there either. (Unless you're talking about going through the front door versus the stage door.)

2777. Ideas for NEW Incentive Upgrades

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-12 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <33768980.587647@news.mindspring.com>
Source record: 198597

the present incentive licensing structure is not really a good
incentive plan.

if someone studies hard and passes the General written test, what can
they then go out and do to celibrate their achievement? ,,, nothing.

if someone passes the very hard Advanced written test what can they
do? exactly the same thing ... nothing (unless they already have the
13 wpm code credit).

if someone passes the Extra written test what can they do? ... nothing
(unless they have the 20 wpm code).

What if we change the rules and make ALL the ham tests have some
tangible reward for passing ALL the exams? For instance ...

Pass the general written and be granted immediate 1 year temporary
GENERAL rights (regardless of code status).

Pass the advanced written and be granted immediate 1 year temporary
ADVANCED rights (regardless of code status).

Pass the extra written and be granted immediate 1 year temporary
EXTRA rights (regardless of code status).

Granting the above with I think add greatly to the upgrade ranks
of hams. They would have a 'real' incentive to work on their license
upgrades. Once they pass their written tests they will be able to get
on the air with their new rights and then have a reason to work even
harder to pass the code, in order to keep their new rights when they
expire at the end of the 365 days.

How would we go about trying to implement this idea?

The interesting thing is that in 1964/1965 when Mariner IV transmitted
the first pictures from Mars, machine reception was used, even if the
data rate was only 8.33 bits/s or about 20 WPM. So it appears that
machine reception was more effective than aural Morse copy already
more than 30 years ago.

I do not quite follow. IMO, 1 bps should be 10 dB better than 10 bps
and 0.1 bps should be 20 dB better than 10 bps. Or are you perhaps
hinting that the advantage is not directly scalable to extremely low
data rates due to frequency stability problems and the frequency
dispersion of the propagation medium (in particular aurora or EME
paths).

While it is impossible to construct a _single_ matched filter for the
keying waveform, I haven't heard of any practical tests of using about
50 matched filters (one for each letter, number and prosign) and use
some majority voting among these. This would more closely resemble the

mechanism the human is using. While not as effective for copying someone with very bad fist, it would be effective for keyer sent Morse or someone with reasonable good fist on a straight key. The problem with A1A is normalizing the output before the voter if the signal experiences large fluctuations in strength, F1A would be much easier, since the a.g.c. settings could be constantly derived.

It is also interested to note that many manual Morse supporters think that a bad fist is a virtue. A more appropriate thing should be to disqualify the sending test (if such test would be organized) or at least require them to use a keyer of some type. The problem is that "bad fist" has not been formally defined and it would be very hard to objectively measure it in a test situation.

>>the hobby.

This is scary, but there seems to be some truth in it. I have been involved at the local club in promoting the training sessions and the tests for new people and it is increasingly harder and harder to promote the hobby/service as a progressive/modern activity. There is a group (still a minority) of potential new hams who is attracted by the cuteness of being able to use ancient communication methods or build/use ancient communication equipment. As such, I do not have anything against it, neither do I have anything against restoring and using cars from the early ears of the century (provided that the old cars do not cause an extra risk to the rest of the traffic).

The scary part is that some traditionalists are trying to keep the hobby/service back in time and soon, the hobby will be attracted _only_ by those interested in the exotic values of old technology. If this is going to happen, it will become increasingly harder to defend our role in society (frequency bands, antenna permits etc.).

>
> TNX es 73s de Steve, KD1UP

TH28A Mods:

1) Remove the 4 screws holding the radio together.
2) With your finger in the battery bay, separate the two parts.
3) The inside of the keypad case has a copper RF shield. Move this
shield
out of the way by removing the 2 screws and bending it up and away
from
the PC board. (There may be double sticky tape holding the shield
to
the IC.) Under the shield you will find a large IC surrounded by
an array of diodes, as follows:

```
+-------+
| |
| IC |
| |
D D D D +-------+
1 1 1 1
5 4 3 2

D D D D
1 1 9 8
1 0
```

(The diode numbers are read vertically.)

NOTE: Diodes D15 & D14 are NOT present in the American version.

4) Remove diodes D8 and D10.
5) Install one of these diodes in D14.

This enables the following three extended modes:

1) Extended receive from 360 Mhz to 400 Mhz.
2) Extended receive from 400 Mhz to 520 Mhz.
3) Extended transmit/receive from 136 Mhz to 174 Mhz.

in addition to the existing aircraft frequencies of:

4) Receive from 118 Mhz to 136 Mhz. (AM)

(AM and FM are switched automatically according to the frequency range.)

To switch between the modes, press the [F] key for one second, then
press the [LOW] key. This will switch between:
a) Amateur VHF band (136 Mhz to 174 Mhz).
b) 340 Mhz band (340 Mhz to 400 Mhz).
c) Aircraft band (118 Mhz to 136 Mhz).

To get the extended amateur UHF receive, press the [BAND] key while in
the
136 Mhz to 174 Mhz mode.

If you have some information about TH-27A, please send it to me...

And if the aliens land, you will probably have your ham radio taken away.
There are all sorts of scenarios unrelated to reality that you can worry
about. Those more efficient modes are already allowed in the CW portion
of the band because, on HF, there are no dedicated CW frequencies. All of
them say "CW, RTTY, and data" or "CW, phone, and Image".

Hi, we'll get right to the point. We operate one of the finest
quality custom color labs in the USA. To introduce you to our
service we're offering the following Internet enlargement special:

Your color negatives hand printed on Kodak Supra Professional
16x20 inch paper. All negatives printed full frame.
Exhibition quality and color corrected---send us any size color
negative (35mm up to 4x5 inches).

* * * * * * * * * *

16 x 20 inch color enlargement special
5 identical prints from same negative-------$79
10 identical prints from same negative------$129

* * * * * * * * * *

Most orders 1 to 2 days in the lab. Add $6 priority mail shipping;
international add $10. We accept Visa and Mastercharge.

Mail your negative(s) and payment to:

TSP CUSTOM LAB
P.O. Box 248
Lake Village, IN 46349 USA

>Cecil, you are incredible.

Thanks Bob, but I'm not really. I'm just an aging old fart ham going
blind and deaf ROTFL in my skivvies trying to drink a beer.

>But when a person is put
>on a marble throne as the Poster Kid for No Code...

Nope, that's not me. Got no throne and I'm far removed from being any
kind of kid.

>As I said if you think you
>deserve the honor of wearing the Red Robe then do so.

Nope, you must have me confused with someone else. I don't even
have any red skivvies. Just beer all over me from ROTFL.

>And if the above is not a slam at every ham that has a call with Two
>Alpha characters in front, then what is it.

It's <tic>, Bob. Get with the program. How come everybody can poke
fun at no-code techs and I can't poke fun at two alpha letter calls?
There's more than one way to play the "Real Ham" game.

>Me thinks I have poked too hard at you Cecil and for that I apologize.

Dang Bob, I thought you were joking - you mean you were serious? In that
case, meet me at the San Tan Mountain at high noon.

>WANT TO LEARN the code.

This is an absolute load of crap. Like any other reflex skill the
ability to copy Morse code varies widely from one individual to
another. I am very used to accomplishing whatever I set out to do ad
while I have passed my code hurdle is was by no means the cake walk you
represent. In fact I had a far harder time than the original poster
did. Please don't try and pass off that WANT TO LEARN crap on me.

My commute varies between 15 and 90 minutes. I had code tapes on every
day for 2 years. It took over a year for me to hear the difference
between letters reliably. Some peoples brains are better suited to
thinking that being a modem, I seem to have one that is not well suited
to modem work. OTOH when I did pass the code roadblock I found the
written tests rather trivial, not because I memorized the question pool
but because I understand the physics of the EM spectrum.

You're an arrogant egocentric horse's ass. You are a poster child for the "drive people away from ham radio" crowd. Why indeed would he want to feel at ease at 20 WPM if people like you are what he can expect to find on CW. My recomendation to the original poster is to find a way to pass the stupid haszing and then turn your back on code forever. If this fellow with all the harsh words for you is representitive of CW ops forget them. If he has really offended you then work it out by working against institutional support for an obsolete mode.

And what part of the bands would that be that you're referring to????

Do you mean the small segments on 6m and 2m that are the ONLY
"CW only" segments in all of our bands???

Or are you under the mistaken assumption that the areas where phone
is prohibited are "CW only" ??? Guess again ... modern digital modes
are already on equal footing with CW there ... you beepers may resent
it, but it's reality ...

> theory and then will be.....................

Ridiculous ... the FCC will NEVER eliminate theory for what's *supposed*
to be a technically-oriented, experimental service ... they didn't
establish
ham radio for the sort of competive games, electronic paintball
competition,
collect "10-10 numbers" sort of crap that some of you twits have perverted
it into ... with the encouragment and support of the twits at the ARRL ...

> Keep the code, it has value as a filter if nothing else.

For filtering out what? Competent people, perhaps ... certainly not lids
twits, and cretins ... just listen to the coded hams on 80m and 20m ...
the vast majority of brand-new no-code techs behave MUCH better ...

*** Say Hello to cops (2) ***

Thanks for your responses to *** Say Hello to cops !! *** !!

OK, now I am interested in transmitting the signal legally.
(I was joking in the very first message !!).

One of the options what I heard that you would be able to talk with
the cops legally if you would work at Police detachment, of course.
But... this seems impossible for me at this time.

are there any licenses that allow you to transmit in the public
service bands ?

say something like volunteer safety patrol ? is it possible ?

any ideas are appreciated.

thanks in advance :)

Gary I think you may be missing the point entirely. I have tried some,
not all, of the newer digital modes. I have used RTTY and found it
fairly enjoyable in that I can carry on communications with a DX
station and not have a pileup trying to bust in. I enjoy operating CW.
What a comment. But the most enjoyable communications comes with VOICE,
no matter the mode, SSB, FM, or heaven prevent AM. TALKING
with someone conveys a certain amount of information in the voice that
can not be transmitted in ANY
digital form. If all you are looking for is the rapid transmission of
information, then by all means
go digital. Cram as much data as you can into the smallest amount of
bandwidth. For some amateurs that
is a goal they strive for.

However, for other amateurs, the simple pleasure of voice communications
with someone across town or on
the other side of the world is their goal. I enjoy communicating with
people to find out about their
lifestyles, what they eat, what they do for recreation, what modes of
transportation is used. Yes I actually ask about the rig, antenna,
weather, and the other usual QSO questions, but go deeper. Ask about
their family (you do know what a family is, right Gary?). Do they have
children, are they in school, what is the school system like.

Gary there is more to this thing called Amateur Radio than JUST
technology. There is more than just how much data can we transmit.
There is more than the code, no-code debate. The wonderful thing about
amateur radio is there is a place for all types of interest. If you like
and enjoy digital modes, then do them, if you like CW, then do it, if
you like contesting, then do it, if you like experimentation, then do
it, if you just want to talk, then do it. There will never be ONE
single reason for the Amateur Radio Service.

Apparently getting that "backed in a corner feeling", our old pal Eric Oyen said:

>I meant it when I said I had NOTHING to lose.
>Why don't you talk tp a P.I. and do a background check?

Wouldn't be worth the time or expense. Trust me, you're not that important, Eric.

>You might discover that I don't own ANYTHING, that I am DEAD, That I am
>DISABLED, currently a STUDENT, etc.
>Get it?

Yeah, I get it now. You're a pathetic little unemployed nobody. Possibly crippled. No life. Nothing better to do besides sit on the computer and the radio all day, drawing a government welfare check and causing problems for other people.

>I know the law in these matter VERY well.

If you knew the law, you wouldn't be posting on a public newsgroup, accusing people of "blackmailing" you when you have no evidence to back up your accusations. Ditto for accusing people of harrassing you via e-mail and posting under multiple addresses. Very foolish to make public accusations against others when you cannot back up your statements with proof.

>Threatening me with legal
>action might get you deeper into debt.

I'm not "threatening" you with anything. I'm just trying to help you by warning you of the consequences of your actions if you continue to make false, libelous, and defamatory statements about myself. I tried to tell you nicely, Eric. I explained in a very calm and civil manner that I am in no way affiliated with the other individuals whom you seem to have a problem with. You chose to disregard this information and continued to make false statements. You do so at your own risk.

>indicates a single user aliasing as 3 people.

You really need to learn more about how the system works, Eric. I almost feel sorry for you, displaying your ignorance in a public newsgroup like this.

I'll tell you one more time: ALL posts eminating from AOL have the SAME path because they originate from the same master server. Duh!

>So, without further comment from IKNOWRADIO, HLKINGSTON or >FRNKBURNS...
>Any action you take against me will result in all of this information
>being used in an appropriate manner.

And what is that, Eric? Please, do tell. We're all waiting with baited breath to hear what some little "student" in Arizona is going to do to us.

>Also note, these accounts are finctitious (mail bounces back). This
>further indicates that the user is trying to remain annonymous.

Chalk up another false statement from Eric Oyen. You have NEVER had mail bounced back from me because you have NEVER sent me mail.

>A copy of these headers is being forwarded to security@aol.com for
>investigation.

Don't expect a response. These folks have better things to do than bother with little unimportant crybabies like you. But if they were to take the time to respons, they would tell you the same thing that I'm telling you: the accounts are in NO way connected. Your other buddies out there in Phoenix may or not be associated with one another; I'll let them argue it out with you. But I have no affiliation with either one, nor with anybody else.

I really feel sorry for you, Eric. Poor little meathead.

I said something to the effect that I could QSO at about 20 wpm rates.
I never said I wrote down 100% copy ... what I *meant* was that I could
follow a typical QSO at that rate ... if you thought I was implying perfect
copy of random code groups at that rate, I appologize for unintentionally
misleading you ...

> >The point is that no special dispensation should be necessary ...

Sounds like what my Mom used to say "Be reasonable ... do it MY way!"
(Which of course, in reality, is really "Allow me to dictate your
behavior.")

> >we should simply change the rules to make them relevant to today's
> >technology, the needs of society,
>
> Yup, and since CW is the second most used mode on HF today, surpassed
> only by SSB, a CW test continues to remain relevant to the hobby.

You have never shown one iota of evidence that the CW test serves ANY
useful purpose as a pass/fail standalone element. Ham radio rules and regs
should NOT be a popularity contest ... they should make technical and
regulatory
sense ... CW testing in today's world does not meet that test ...

(I know you'll never agree, but I have to keep saying it just to counter your pro-code propaganda.)

As far as I know, the US is the only administration that sub-allocates the amateur bands, whereby certain emissions are prohibited in certain portions of the bands. Considering that the rest of the world is able to cope without sub-band allocations, and there is indeed no call for the eradication of the use of Morse code, then Bryant's conclusion has no basis in fact and is mere conjecture without foundation.

The pro-code testing advocates can't have it both ways; on the one hand, they claim that its popularity legitimizes a government sponsored welfare program that will spit out ineptly trained Morse code decoders, the need for which is merely speculative, rather than having any legitimate spectrum management goals. While on the other hand, cringe at the thought that if the Morse code testing program was to be eliminated, then those who use that mode will be subject to a possible prohibition of their mode of choice. The pro-code crowd seemingly resent (or perhaps more rightly, are in abject terror of) the concept that the use of Morse code should be able to survive on its own merits, rather than having to depend upon a government program.

Glen,

Auroral distortion is essentially multipath-induced distortions in
amplitude
and phase of the received signal ...agreed?

I have patents on a system that will allow the receiver to characterize and
remove those distortions, using a techniqe that could be called feedforward
signal regeneration (regeneration as in "restoring a signal to the state it
had
prior to the channel impairments," not regeneration as "about to oscillate"
like in the old regenerative receivers) ... can't believe that QST just
published
a design for a regen (almost oscillating) rx ... absolutely freaking
amazing
how retro the ARRL is and how pathetic QST has become ...

Anyway, this technique should allow both SSB and high efficiency data
(say a constellation like 16QAM or 64QAM) to be used in spite of such
channel impairments ...

If you'd like to know more, e-mail me and I'll arrange to provide more info
..

It seems HTX-242 has some "bugs."

When I was using CB radio near HTX-242,
HTX-242 transmitted the signal of CB Radio when I transmitted the CB
Signal. (I did not push PTP but HTX-242 transmitted when I pushed
PTT of CB !!) Now, I have to turn off HTX-242 when I use CB !!

any ideas ? help !!!!!

I'm going for my novice and maybe general license. I've heard that there are tapes (not Radio Shack) that give you code at 13wpm, but the characters are at 25wpm. This seems to make sense to me in that I only have to learn them once and not relearn at a higher rate. Does anyone know where I can find these? Do any of you long time amateurs have a different opinion?

>Keep the code, it has value as a filter if nothing else.

But what response does it have? Is it lowpass or highpass?
From some of the indications I've seen on HF, I'd suggest
it is lowpass since some mighty lowdown people seem to
have passed it. Perhaps it answers the question "are you
dumb enough to do this?"

You do know what the most common last words of a redneck
are don't you?

"Hey ya'll, lookit me do this!"

That's usually said just before said redneck does something
terminally stupid like trying to jump a train with his souped up
riding lawnmower.

Well, how's this for starters:
And theory tests are getting more rigorous:
To those that claim there is ONLY a lessening
(dumbing down per the likes of several poster's
past comments here) of all requirements needed
for the various theory tests AND those that keep
harping on the rote memorization of pool questions,
you will be happy to know that theory test pools
already have changed significantly and will impact
as of 7/1/97.

As was reported in the W5YI Report of 12/15/96,
the NOVICE and TECHNICIAN question pools
have increased by 46%. The prior set of
questions comprised a total pool of 632 questions,
while the new pool of questions is now 924.
The Novice pool has increased 41% from a total
of 342 questions to 483. The Technician pool has
increased 52% from 290 to 441.

Now I don't know anyone that can just spend
a weekend or even longer to exactly
memorize 440 questions, much less the
over 900 just to pass the Novice/Technician
set of theory elements.

What some may not have known (and I include myself
in that) is that there is no upper limit to the quantity
of questions that can be in the pool. There is
only a part 97 minimum (97.523) that requires
"Each question pool must be at least 10 times the
number of questions required for a single

examination."

Given that no upper bound exists for question pools,
I'd like to sugest that each question that deals with
a formula calculation have at least 20 iterations
where each iteration uses a different set of variables.
That should truly eliminate any rote memorization of
the questions involving formula calculations.

>Carl, I would like to think that you and your buddies are sincere in

>had been paid only to have the accomplishment denigrated by saying
>that their struggles were meaningless.

How's this suggestion:

To: QST Correspondence (sent 4/16/96)

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of
a CW test at 13 wpm and 20 wpm respectfully along with a separate
theory test. In both cases the CW test is a stand alone, pass (70%
correct) fail requirement. But what if we offered test takers the
opportunity to take the test elements as they do today OR, as an
option, we let them take the 13 wpm or 20 wpm CW test as an integral
part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a
passing score of 70%, they would be granted an CSCE and then take the
theory test as before. However, if they failed the CW test, they
would be permitted to merge the CW test results from that day's test
with their theory results also taken on that day only. If they still
failed to pass the theory test using a merged score, no CSCE would be
issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19
questions correctly to pass. The 13 wpm CW test is 10 questions and

one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

And what grandiose claims would that be Jerry, that I am dyslexic and attended the Oldman School of Education for it, that I hold a degree in special education, specifically oriented to dyslexia earned at Bowling Green State University, that I am a Doctor of Chiropractic with a degree earned at Palmer Chiropractic College, that I am licensed to practice in the States of Ohio, Michigan, and West Virginia?

Can you offer me any proof that the above is not true Jerry?

By the way, there are still two dyslexics who have passed the 13 wpm code Jerry. You and I.

That's simply the result of voluntary agreements (largely promulgated by
the
ARRL) designed to provide a "sanctuary" for the beepers.

It is still illegal even if you are the licensee for both bands.

Reason: Although a ham needs no type acceptance to convert a radio for a
non-ham
band to a ham band he may use, type acceptance IS required for any rig
used on a
non-ham band.

This I know, having been the station licensee in 4 different radio
services and a
1st Class RTL course,(which I completed, but was too young & too broke
to become

a full 1st Class RTL'ee), and am now studying for my own SW broadcasting license,
which is the only other radio service in the US that type acceptance on the rigs,
(it must only pass a specs inspection, according to Uncle Spam... er I mean Sam).

So *that's* how you became a ham, Mike? Some clerk who cross-trained
from processing the old CB license apps at the FCC office in Gettysburg
screwed up from force of habit and issued a license to you on the basis
of a CB-like affidavit you made up and mailed in?

You get credit for an original idea (probably your only one) ... but I'd
still
love to see you retested to a decent theory test ...

Hey, Gary, all hams and all VEs use the International Morse (Continental) Code. As most of us know, the Farnsworth method is simply a method of adjusting speed and spacing. My, aren't we bright today.

2841. CW Code Re-testing Requirement

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-13 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <3378b6d6.743838@news.mindspring.com>
Source record: 198454
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.ham-radio

I see code exams as necessary ... if you want to run cw in the HF cw sub-bands only. The only treaty obligation we have is for 5 wpm code. They (13/20 wpm code tests) have no future reason to exist for testing to see if a ham should be able to operate voice or data (computer) in the HF voice and data bands.

If the present high speed code hams [Generals and above] want to keep the current code testing requirements, then lets make them put up or shut up. Change the rules to require RE-TESTING on CW (13/20 wpm only) every 5 years in order to keep your license.

Let's see what happens. If they truely believe in CW they will endorse this idea. But if they only want to keep other hams out of HF country then they will fight this change to improve the CW use on HF. Because they won't want to have to re-learn the code themselves in order to keep their licenses.

If you agree and would like to help me change this present situation, email me: KE4IKT@sco-inc.com

I'm running Mac OS on PPC now, but am thinking about adding extra hard drive and install MkLinux for Mac.

Get this- local bookstore sells 7 CD set of MkLinux including gigabytes of extra stuff for $50.

On that basis alone, it may be hard to resist.

One big factor is that I am using Microsim 7.1 CAD suite and have come up against limits on eval version for designing variable BW constant CF crystal filters.

I have MacSpice, but has no nice GUI or schematic capture. The last time I used Spice on Unix was at Berkeley Evans hall basement using punch cards :) Does it now have nice GUI like Microsim??

Rob.

While I want to make it perfectly clear that IN NO WAY am I making
a judgement in THIS case, of which I have NO specific knowledge, there
ARE in fact people who DO deserve to receive a message like this
(privately).

Again, I am NOT saying that the message was called for in this case (or
not) ... just that there ARE folks who are such twits that they deserve
one.

I speak from experience as a former part-owner/operator of a
multi-band/multi-mountaintop VHF/UHF system in SoCal that was
primarily built to support public service activities relating to fires,
floods,
earthquakes, etc. but used for more general purposes in normal times.

I just felt someone who's "been there, done that, got the T-shirt" should
voice the posibility that in some cases a repeater operator might be
justified in making such comments to a particularly bothersome twit ...

CUSHMAN COLLECTORS ONLY - -

Pristine MCM-5 about to be orphaned. 1972 vintage;
original factory cal and inspection paper tag still
tied to carrying handle, front cover with original
cal sheet dated Dec 7, 1972 STILL IN PLACE,
has 0.0001% high accuracy factory mod built in,
has the "newer" nice rectangular plastic-faced
Weston meter, single owner unit, high 8 on the
venerable one-to-ten scale as far as physical
condition goes. About forty factory crystals
installed for various commercial bands.

NO MANUAL. Operational condition unknown,
but was in service when replaced with newer
equipment.

DROP DEAD DATE to make an acceptable offer
is Wednesday, 05-21. (Broad hint: the first
offer I get that covers the shipping will probably
get it, so I'd hurry if I were you...)

This unit cries out to be in your shack!! Don't
wait! Someone else is probably composing
an offer as you read this!

The unit is currently located in the People's Republic
of California.

PS - I'm still actively looking for plug-ins, internal circuit
boards and/or a spare CE-6 (or CE-6A). Especially want
an EXTENDER BOARD for servicing the plug-ins...
Will pay cash!! Please contact me!!

Nope, just somebody with a huge ego and an ever bigger bug up his ass. No
doubt that being the owner / operator of a repeater has it's headaches.
Dealing with the nitwits, whiners, jammers, and wingnuts in general, not
to mention the technical problems that goes with just keeping a repeater
running. But a message such as this is un-called for.

I would suggest perhaps that he / she take up another hobby. Nobody is
making him run a repeater. Supposedly it's for his own enjoyment. If
that's fun, then sign me up for another root canal please.

Is it any wonder why ham radio is dying?

Sure the police can file charges on him for illegal use of a police
radio. They can even take portable radios out of cars that are capable
of rx on police bands if they dont have the permission.

I don't see how you got that square root into the equation. What
assumptions are you using about the situation ? Are you using constant
power and constant transmitted bandwidth and variable bit rate ?

Looking at the basic Shannon theorem

C = BW * log2 (1 + CNR)

and calculating some values

BW CNR CNR C
[Hz] [dB] [bit/s]

1 100000 50,0 16,60965
1 10000 40,0 13,28786
1 1000 30,0 9,96723
1 100 20,0 6,65821
1 10 10,0 3,45943
1 1 0,0 1,00000
1 0,1 -10,0 0,13750
1 0,01 -20,0 0,01436
1 0,001 -30,0 0,00144
1 0,0001 -40,0 0,00014

It is quite apparent that for low CNR (< 0 dB) i.e. spread spectrum,
dropping the bit rate to 1/10th by going from, say 0.014 bit rate to
0.0014 bit rate would reduce the required CNR by 10 dB (from -20 dB to
-30 dB SNR). However, at positive CNR, the log2 (CNR) part is
dominating. So I do not see, how you got that square root. For
negative CNR a better formula would be 10*log(S2/S1).

>>>
>>>I'm running a PSK system on HF now which operates at a *maximum* power

>>>of 10 mW on links between here and Indy and here and Denver. The data rate

I was simply assuming scaling both bit rate and occupied bandwidth and
thus, in white noise environment, the linear increase of the CNR.

>
>The advantage scales with the log of the square root of the speed
>change, see the equation above. That's an inherent consequence
>of the integration being done on the symbols.

Sorry, but the only way your original formula makes sense to me is
that you are using 4 or 8 states per symbol and you are thinking about
the trade-offs between number of states, CNR and occupied bandwidth.
Could you please qualify the initial assumptions that you made, so it
would be easier to follow your calculations.

At least for VHF, the signal is spread over several hundred Hz and can
occupy almost the whole CW filter. When copying by ear, it is mostly
about detect the excess noise when the signal is present, in practice,
detecting the change in noise level and noise "color" when the signal
is turned on and off.

While there have been lots of tests about aural copyability of morse
sent in a pure tone in presence of noise to determine the minimum CNR
required, I haven't heard of any test in which a broad band noise is
used as the signal, so it is hard to know how much total signal power
vs. total noise power is required for aural copy.

I have never thought about aurora as a problem with multipath but
rather as a problem of frequency spreading (and thus lower power
density), at least on higher frequencies (VHF), so I do not see how
spread spectrum would help the situation. Apparently only symbol
integration can be used. There might be some possibilities to use some
kind of equalizer if a known pilot signal would also be transmitted.
To me, it seems to be a similar problem as using adaptive optics on
large optical telescopes to compensate for the instability of the
atmosphere.

>Direct sequence spreading is probably the best method to use for

>wide shift on HF even though amateurs went to narrow shift.) Fairly
>loose filters should be used in the demodulator to accomodate the
>doppler spreading. And the symbol rate should be low so that
>integrate and dump averaging can be used.

You could also look at aurora as a form of random FM, which is a problem in mobile communication in the microwave range. When a vehicle moves among buildings, there is of course the multipath propagation causing Rayleigh fading, but there is also the Doppler shift due to the moving vehicle. When the signal is reflected from objects ahead of the vehicle it will have a positive doppler shift (+df) and when reflected from objects behind it will have a negative Doppler shift (-df). When the car moves in the streets, there will be simultaneous reflections directly in front and behind the car and also at all angles at the sides (thus a large variety relative velocities) and consequently a large variety of Doppler shifts filling out the band from -df to +df around the carrier. At 1.3 GHz and road speeds df and hence the peak deviation for the random-FM is about 100 Hz. Thus, if your transmitted audio deviation is 3 kHz, the maximum post detection SNR is 30 dB (=20log(3kHz/100Hz)) no matter what your pre-detector CNR is.

To get a decent SNR a large deviation should be used. While this has been derived for random-FM in microwave mobile environment, but I do not see why this could not be applied for aurora communication.

More than a decade ago, there were suggestions of using some kind of pilot tone systems to compensate for random-FM. This might also be applicable for aurora communication.

How's "Obstructing a Police Officer" and/or "Obstruction of Justice" for
starters???
Hindering the ability of an officer to carry out his duties (jamming his
radio) certainly is an offense at the local level. And if for some
reason the local prosecutor doesn't want to go along, getting a Federal
warrant isn't all that hard to do.

2862. RE: Mod for Standard C5900DA

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-13 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9705131343291534 6@atdbbs.com>
Source record: 198475

For those of you who have been asking, here is the
modification for the new Standard C5900DA TriBand Radio.

This modification is only for those who are a active
member of a MARS organization or Civil Air Patrol. To
have this mod, you must serve in some type of communication
capacity in the respected organization.

Step 1.) With the radio facing you, remove the top cover
of the radio.

Step 2.) Near the front center of the radio, you will approx.
observe 5 items in a row.

Step 3.) These are surface mount type capacitors and resistors,
you will need to remove RL99.

Step 4.) RL99 is not labeled on the PC board, so you will have to
estiminate which capacitor is it by the below diagram.

TOP BOARD

cap empty res res res cap cap

* * * * * ** **

* * * * * ** ** Box

* * * * * CL37 CL43 ******

* * * * * * *

* * * * * ******

CL93 PAO RL99 RL97 RL98

Step 5.) Remove RL99. It will be right next to the
empty slot. Use a very fine tip iron at
low heat. A small toothpick and solder wick aids
in removing the resistor.

Step 6.) Do a hard reset of the radio.

Step 7.) The radio will now transmit 40-80, 100-180, 345-495 Mhz.

It is illegal to transmit on commercial or public service frequencies.
All unauthorized modifications of your radio will void the

>Not bragging Jerry, You told me dyslexics couldn't learn the code. Just
>reminding you that it's not true. Still two of us. You and I.

I never said dyslexics could not learn the code but rather the effort they had to put in to do it was excessive. Again I ask you not to cite me as an example. With recent demonstrations of your need to "win" debates at any cost icluding truth and honor I doubt you will comply with my request but I still ask.

As to your assertions on education they are too far off subject to comment further but they were entertaining. I'll let you and the AMA work that issue.

Now I will take my own advice and not bother with you any further, I cannot debate the factually challenged.

Jerry

> aren't they willing to make a small sacrifice to learn the code?

Good question, Tom. However, I think a better question would be:

"why aren't they already licensed as codeless techs?"

See, the codeless tech license was created specifically for these people.
The hoardes of technically-elite people who wanted to get into the hobby
to contribute to it.

In this respect, the codeless tech license has been an abject failure.
(yes, it has gotten many technically-savvy people in the hobby, but all
it really did was simply get a cross-section of americana into the hobby --
some technically savvy, some total morons, and a lot of people in the
middle of the bell curve.)

If all these "technically superior" people that Carl claims are out there
just waiting to get into the hobby *ARE* really there, why are they not
licensed as codeless techs? Why are they not licensed *NOW*, technically
innovating for the hobby *NOW*?

The simple answer to the question is that all these people Carl claims
exists really do not exist. Instead, they are a bunch of technical snobs
who think their advanced electronics knowledge somehow entitles (we do
after all have an entitlement mentality in this country) them to receive
special dipensation. Since they are 'mentally superior' to the rest of
us, they shouldn't >have< to take a code test.

Carl's "default answer" to my question above is that all these technical
elites don't want to be saddled with some inferior license because
codeless techs are considered "second class citizens". Well, if that's
true, I sure as hell don't understand why all of a sudden they would be
instantly accepted with a codeless HF license by the same group of people
which considers codeless VHF techs a 2nd class license. Seems to me that
Carl's excuse rings a bit hollow.

So, if Carl's claimed reasons are not true (and I think you'll agree
that his perception is, if not purposely false in underlying intent is
unintentionally misguided or misconstrued) what would happen if all

these 'technically elite' friends of Carl's got amateur licenses?

Yup, you guessed it. They'd all be working SSB
on HF. That's what they *really* want (otherwise, if they were *really*
interested in experimenting et al in the hobby, they'd already *be*
licensed) -- Carl just can't come out and tell the truth, because he
knows nobody will buy it. Instead, he has to make up this song and
dance.

Most of us, though, recognize Carl's arguments for what they are --
I almost stepped in some of it today at the horse barn.

I think the extra cash is worth a dual-band tranceiver.

As far as an HT, I would highly recommend the Yaesu FT-50RD. This rig has a lot to offer.

For a moblie rig, I like the dual-band Yaesu FT-8500. Extremely easy to program. You don't have to remember any obscure key combinations or carry the instruction manual around with you to program/change features.

For dual-band antennas, the Diamond antennas offer good performance. The Larsen model is also worth considering.

Please forward to all amateur radio operators

I am circulating this petition across the state of Michigan. Anyone wishing to join in on this petition can change it from the state of michigan and change it to their own state. You can also down load it off my web page http://www.concentric.net/~ka8ykk

Amateur Radio Operators
>From the State of Michigan
We the Amateur Radio operators from the State of Michigan do hereby agree to continue to abide by all the rules of Amateur Radio. We pledge to improve the amateur radio bands, and teach new hams joining the hobby the correct operating procedures which should be followed on the amateur bands. By doing this, we are petitioning the American Radio Relay League in our fight to help clean up the language on the Amateur bands, and are looking for civility/politeness in conversations. By showing our support in this petition, we are hoping that the American Radio Relay League can help us fight the language that we are hearing on these bands.

We are asking the American Radio Relay League to help in this clean up by: Hosting several national forums on this problem, and how it can be addressed, We are looking for a promise from the ARRL to report on how enforcement is currently done. We are also looking for a promise from the ARRL to create a sort of self enforcement mechanism, and possibly create a large fine mechanism that will generate enough money to help correct this problem. We realize there is such a thing as freedom of speech but, there are also the words such as civility, and politeness.

I Deborah K. Kirkbride KA8YKK am asking all amateurs in the State of Michigan to please sign this petition, and send it to me at the following address: 1315 Center Avenue, Apartment #1 Bay City, MI 48708. I will in turn when enough signatures are gathered be sending all petitions received to the ARRL.
Please make copies of this petition and pass it along to other clubs, and Amateurs in you area. Please help me in this fight to get the Amateur Bands back on the right track and keep them there.

ATTENTION - DAYTON ACTIVITIES

all interested radio hobbyists and all PARG MEMBERS

The Phantom's Amateur Radio Group International (PARG) will be holding their annual Dayton meetings this year during the Dayton HAMVENTION weekend, May 17, 1997.

All PARG members should meet on the PARG repeater (443.575 MHz, with a PL of 100 HZ). This frequency has been cleared with HAMVENTION officals & is also listed on their web page (HTTP://www.hamvention.org) in the un-official activities section.

The PARG - Dayton activities this year should include the annual PARG dinners held friday & saturday nites, amoung other activities as have been done in the past.

At the PARG dinners, a few of the topics of discussion will include the internet, lids, repeaters, and interference. Featured speakers will include:

Larry F. Johnson, K7LJ, PARG Co-founder
Justin Bousquet, AD7O, PARG President
John Mackey, Jr., KA0SSF PARG Secretary & Co-founder

At the time of this writing, it is still un-clear if Rick Larsen, KD0XD, PARG Midwest Division Co-chair, will be able to attend. If Mr. Larsen is in attendence, he will present on the most recent activities of the PARG midwest division in addition to the already scheduled topics.

Also, due to actions in the past on various repeaters in the Dayton area during Hamvention weekend, the PARG Interference Committee will be active during the Hamvention weekend in Dayton. The exact level of activity from the PARG Interference Committee is not yet clear. (actively pursuring or simply monitoring is yet un-decided)

For more information please go the the PARG web page: HTTP://www.teleport.com/~mscott/dumb.shtml or e-mail: Jmackey@usa.net. The Dayton Hamvention web page is HTTP://www.hamvention.org.

Bzzzzzt! Wrong. Cecil may have *implied* such things, and you or others may have *inferred* them from what he wrote, bur the reverse is incorrect.

Since we have "implied" CW-purity Nazis spewing all over the newsgroup, do you mind if I get on my launguage high horse and demand that hams learn proper English (or thrir native language), whether SSB, FM, CW, or Usenet?

After all, there are many sides to the "purity" of ham radio... Misusing the language in an attempt to appear erudite is counter-productive...

hossie, KC0ES, who wishes more people would "stick it in their innuendoes" and enjoy whatever aspects of life appeal to them without trying to force others into the same mold

Gang:

We are about to release a couple of new Windows-based programs for the ham market. One of them requires 32-bit performance for best results, but we are considering making lower-end version for those still stuck on Windows 3.1.
How many still use Win 3.1? I know that on some very old machines there is little choice, but our sense is that use of the old 16-bit Windows is pretty limited. Anyone have a gut feel for Win3.1 usage among their friends, *especially in packet operation*?

Thanks for any info de Dave, K9XK.

>now.

The stuff electronics schools teach about application hardware is always
obsolete, usually before the ink dries on your diploma. That's why the amateur
theory exams don't ask about specific hardware implementations. They ask
about fundamental theory. *That never changes*. Maxwell's equations are
just as true today as they ever were. Ohm's Law is still as valid today as it
was when I was licensed. Inductors still have inductance and capacitors still
have capacitance, just like they always did. Kirchhoff's laws still hold, and are
just as useful today as they ever were. Etc. Theory lasts forever (unless some
shocking discovery overturns it, which is *extremely* unlikely here given the
myriad proofs of fundamental electrical theory we have down through the years).
If you don't understand that, then you don't understand the fundamentals you
need to know to be an amateur, Extra Class license or no Extra Class license.

Randall, I'll tell you what I think (it's worth what you paid for it).
I've listened to Code Quick. It may be useful to help you with
initially learning the code. I don't think it is a good way to get
your speed up for the exams, however. And the cute mnemonics
may drive you crazy trying to forget them so you can move from
conscious translation to automatic recognition, as you must if
you want to obtain any speed with Morse.

Remember that the VEs don't use Morse for the tests. They use
Farnsworth Code. If you are studying to pass the tests, you should
study the code that will be on the examination. SuperMorse can do
that.

Actually Tom under current rules the CW band plan spectrum can already
be used for more efficient modes of communications. RTTY the tors and
Clover are all narrow band so they can be used on the "CW" portions of
the bands. But since they are so efficient they don't have to "hog the
bands".

I have one too..... it is good as long as you do not try to modify
it. you will never be (?) possible to extend rx/tx from 144-148.

What do you disagree with? Do you think we should end CW as a communications method? That seems to be what you are saying. Sorry old man I must disagree we should keep the code as a legal way to communicate just end the testing.

Jerry

Oh man! You haven't seen anything like Hamvention. I guarantee! I can't wait to get there myself! :) This will be my third (or fourth) hamvention. 30,000 hams milling about the flea market and inside hara arena. You name it, and you can find it at Hamvention. I will be in attendence Saturday and Sunday. 73, and hope to see you there!

Why will this not happen? It will create a burden on the already overburdened FCC. I am not really for, nor against eliminating the code. I don't really think it's that BIG of a deal to learn code if you just sit an practice it. What happens if they eliminate the code? Shrug. I don't care either way.

You'd be violating *two* sets of laws:

1) FCC regs against transmitting on unauthorized frequencies

More seriously:

2) Interfering with the operations of a public service and law enforcement agency.

It's not just FCC regs you have to answer to.

>how retro the ARRL is and how pathetic QST has become ...

Waitasec... This aside is irrelevant. Some people enjoy fiddling
with old, simple designs, just for fun. I don't have a problem with
that. As for QST, it's always been pathetic, but it seems to be a bit
better now than it was years ago.

>Anyway, this technique should allow both SSB and high efficiency data
>(say a constellation like 16QAM or 64QAM) to be used in spite of such
>channel impairments ...

Yeah, but have you tested it empirically under Real World conditions,
and does it work?

>If you'd like to know more, e-mail me and I'll arrange to provide more info

That won't be necessary. I don't need the tech details, just some
debating material.

Body handling: HTML body converted to readable text

http://www.hamradio-online.com - the all volunteer, online ham radio magazine is now read in 65 countries. Some of the feature stories we have now include:

Ham Files Suit Claiming He "Owns" An Amateur Radio Frequency
In an ongoing dispute in Southern California (USA), Ron Ames has filed a lawsuit against the Keller Peak Repeater Association (KPRA) claiming ownership of a sanctioned and coordinated repeater frequency.

13cm PSK transceiver for 1.2Mbit/s packet radio
Here, Matjaz Vidmar details his design of a 1.2 million bits per second digital radio for Amateur use.

Simulated Satellite Projects Using High Altitude Balloons
Operated by NASA in conjunction with AMSAT and local amateur radio groups, this project simulates many of the practices and remote observing challenges inherent in working with real satellites, and offers a unique hands-on experience for students in K-12 earth science, physical science, physics, electronics or aerospace classes.

Equipment Options for Medium and High-Speed Packet Radio
Here is an excellent summary of the hardware options available for constructing medium- to high-speed packet radio links (9600 bps to 56 kbps and beyond).

Ham Radio Operators: Communications of Last Resort
The Grand Forks North Dakota Herald reports on amateur radio in the flood stricken Red River Valley.

Discussion on Sunspots and Earth Climate
The sun-climate connection is something that's been talked about many times. It's like everybody knows there has to be some connection but no one can prove a good case. This time the evidence seems pretty compelling and we have a better handle on Earth's climate past.

And many more articles this month too!

Plus the best propagation resources you'll find on the Net; equipment specifications; product directory and other sites lists; disaster situation updates and so much more.

This is a free web site, run by volunteers. No ads. Since October 1995. There is a reason this is the world's leading amateur radio web site. Stop on by and enjoy!

Ed (KF7VY) and Kim (N7VPL) Mitchell

Try channel 19 on a CB. I hope your not a "Ham" this would be in violation of FCC rules you know? I'm a police officer and while I can bend a little if someone spoke on a police band I would be forced to arrest them. That could cause a conflict in getting a dispatch call to save someones life. Get with your local law enforcement and see how many are involved in Ham radio/Cb. We have both in my county.

Personally, I would save up a little more cash and get a *much* better
HT. I have had over amateur HT's, and the best yet is the Yaesu FT-50RD.
I bought it last month for only $349 from Ham Radio Outlet in Atlanta
(comes with two battery packs). And no, I don't work for any electronics
supplier.

The HTX-202 & -404 are both good rigs, and I think their major strength is the fact that they are designed for operation only in their respective bands (2m & 440). This provides a much better front end on the rigs and I have to say from experience that mine seem to be immune to intermod.

I don't know exactly what you are looking for, but I choose HT's based on performance, not just features. Later....

It makes no difference if code is easy or hard. The issue is
and continues to be that it (code testing) no longer
deserves to be a separate pass/fail test element to gain
HF access. There's NO compelling reason today to force
anyone to learn CW for HF access, much less advanced
speeds up to 20wpm for additional privaledges having nothing
to do with any need to operate CW at all.

It always seems to sound like that's *exactly* what the incumbent,
technically ignorant, "beeping is my only claim to fame" folks
actually fear so much ... IOW, the concept that they might have to
accept the reality that there are folks out there with FAR more useful,
valuable skills than beeping ...

> However your attitude really troubles
> me. Are these advancements to be made for the betterment of Amateur
> Radio or for the egos of those folks making them. If these technically

> aren't they willing to make a small sacrifice to learn the code?

Yeah, like getting down on their knees and kissing the backsides of
a bunch of olde fartz who are technically incompetent but are "better"
because they can beep real fast? I don't think so ...

> Let's
> say it took them a year, even two years, to learn 13 WPM. That's a small

> Radio!

NO ... That's an incredible waste of valuable time that you're suggesting
..
it makes ZERO sense ... and the attitude that the beepers have is what
should be troubling to anyone with intelligence and sense ... the "we
demand that you stay firmly locked in the past and we won't let you in if
you don't buy into that ideology completely ..."

Terry,

I am glad that you, personally, don't feel this way, but ... unfortunately
..
many coded hams do ... to many of them, the main achievment of their
entire lives seems to be that they passed the 13 or 20 wpm Morse test
so they could go back to sleep and remain technically ignorant, awaking
only for the occasional "move" in some radio-based version of paintball
wars (or "king of the hill," or whatever game it happens to be), collect
another "10-10 number" or gather another piece of wallpaper
... something that they've convinced themselves is "the true meaning
of ham radio" ... it's pathetic and it's killing ham radio ...

There's a big difference between a band plan and where a mode is predominately used. Listen to 7.000 to 7.050 and tell me how much RTTY and AMTOR you hear compared to 7.075 to 7.100 Mhz.

Actually, it would be best if the two were used in conjuntion with each other. Even after passing a 5 WPM test, some people stagnate at the 10 WPM level. If you've learned code the old fashioned way (rote memorization of a series of meaningless characters) it can be quite difficult at higher speeds. Code Quick does a great job of breaking out of this mode. Once the mnemonics are known, practice on Super Morse will be much easier.

Gary ... while SS does work well against multipath, it is not the only
nor necessarily the best solution in all situations ...

My technique, which I mentioned in another response to the original
question, deals with both the multipath fading and the dopple spreading
and results in the ability to do true coherent detection ... a decided
advantage ... the corrupted signal is processed in the receiver in a
manner which permits the receiver to continuously characterize the
fading amplitude and fading phase of the multipath channel and, in a
feedforward manner, regenerate faded signals to their unfaded state.

This allows operation (with more dense signal constellations) in multipath
environments that would result in a serious "irreducable error rate"
problem
with more conventional techniques ...

> now.

That problem exists within ham radio ... I would venture to say that a vast
majority of long-term licensees (and I am in this group, having been
licensed
since 1975) are woefully incompetent by today's standards because they
have not kept up with the changes in technology (I do NOT fall in this
sub-group).

This is why I favor retesting for a reasonable level of technical currency
and
competency at each renewal ... giving existing licensees 5 years or until
their
next renewal to prepare in the interest of fairness ... anyone who cannot
become
technically competent in 5-10 years simply is not qualified, period. This
is
consistent with the govenment's objectives in licensing.

> This whole discussion is getting more ridiculous by the second. Who can
> sound smarter than whom....Who can use the biggest words...The anti-code
> people won't listen to anything the CW people are saying.

We listen to the Morse Myths, promulgated by the technically ignorant and
refute them with sound, factual engineering facts ...

We reject the emotional arguments like "it's *tradition*" or "you have to
work for it"
ad nauseum ... because they have no place in a government-mandated
licensing

arena ...

Those two areas seem to completely cover "the pro-code side" ... what else
is
there to listen to???

Hi Carl, I wonder if we could get enough support to cause that to happen?
Instead of bringing criminal charges against those guys for foul language
and interferrence, maybe a mechanism could be set up for requiring hams who
violate the rules of ham radio to be required to re-test at their current
license level or else forfeit their license.

Hi, Carl.

I never have understood why there is a need for the question pools. Why not just provide the general subject matter to study and forget about example test questions? It seems to me that question pools discourage one from truly assimilating the radio theory so that it can be applied to actual situations. Instead, it encourages rote memorization. I remember using an Ameco textbook to study for my General class license. I used the ARRL Handbook as my study guide for my Extra. Preparing for my ham license by actually studying radio theory was exciting to me. On

the other hand, studying questions and answers would be drudgery!

I still use Win 3.1. I dislike Win 95 because you can never exit the program, you're always in it. I prefer to have some control over my computer rather than a software program having ALL the control.

I have friends who have Win 95 simply because they bought new computers and it came with them. I have helped them on numerous occassions to fix problems they were having with Win 95 and it is a real pain in the a** diagnosing a prob on Win 95. I have had few probs diagnosing software probs on Win 3.1.

BTW, since you want your software to be 32 bit, why not make it compatible with Win 32s so us lowly Win 3.1 users can use it.

2926. Re: Rude Repeater Operators

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-14 00:00:00 UTC
From: MTB302@speedlink.com
Message-ID: <3379b10b.4991197@news.speedlink.com>
Source record: 198346

I agree wholeheartedly! In my area there is a rude, arrogant control operator of a repeater that is owned by a large club. One day his beloved yuppie repeater got jammed out by our local drunken lid. This stuck-up control op got on there and said that the jammers were people who frequented another local repeater known for jamming and cursing. He said that everyone who talks on that other repeater is a "minimum wage, security guard type" person, and that anyone who makes less than $10 an hour is a scumbag. All this jerk is doing by acting this way is proving to people that many hams are elitist. Nowhere in Part 97 does it say that you have to make a certain amount of money to be a "good ham"! Case in point about ham radio's reputation: I can't unload my brand-new, never mobile, still under warranty HTX-212. Nobody wants to buy another 2 meter radio around here when all they're going to hear is a bunch of boring QSO's, jamming, and yuppie elitism.

: I wanted to say Hello to show appreciation...

You don't say "in here" in English. Drop the "in", or if you want to use "in", say "in Japan" or "in America". Just because you use "ni" or "de" in Japanese, doesn't always mean it translates directly to "in".

From my experience, although it's very small, with the Japanese government and the Japanese police, they wouldn't want your dumb ass interfering with their radio communications there, either. Why don't you just drop the whole idea. Police have better things to do than talk to your dumb, cracker ass. I assume that since you cannot get a job as a law enforcement officer, you are not a citizen. Become a citizen, and then you should be able to get that job. But it's not like we would even want someone with your kind of attitude as a cop anyways. While you are busy saying "hi," someone could be transmitting a valid call for help. You could cost someone their life, just because you were being childish and moronic.

I recently saw an advertisement for the new Alinco DJ-S46T FRS (Family Radio Service) handheld radio. Does anyone have further information on this?!

It appears to be practically identical to the DJ-S41T and the new DJ-S11T, but works on the new FRS band. The ad that I saw said that it hadn't yet been approved by the FCC and didn't include a price. Anyone know when this might be available and how much it might cost?!

Thanks,
Darvell (N7LN)

Source record: 198352

Eric,

With all due respect, you have got to be the most clueless individuals I have come across online.

Your lack of knowledge is laughable, especially considering how you seem to believe you're the ultimate authority on the workings of the Internet. You accuse individuals of conspiring against you and being connected with one another simply because their IDs happen to all end in 'aol.com' and because they share a common path. Well, of COURSE they do, you fool! If you had even a basic understanding of how AOL's system works, you'd realize that all postings made from their network originate from a common point!

Then there's the endless complaints about how others are treating you badly. Sending you unwanted e-mail, posting negative comments about you on these newsgroups, interfering with your CB and amateur radio transmissions. Eric, have you ever asked yourself why these people are engaging you in this manner? Might they possibly have a reason? Might you have caused undue attention to be drawn unto yourself? You must have done something to annoy or entice them. People don't just pick someone at random and start interfering with their communications. What's the rest of the story, Eric?

From the information you have provided us in your own postings, I have concluded that you're one of the losers of life's lottery. You're a sad little man who uses his "disability" as a crutch and as an excuse to keep from achieving anything meaningful in life. Instead of working to support yourself and get ahead in the world, you apparently sit at home all day in front of the computer and the radio. Maybe I'm wrong here; maybe you do have some small, meaningless job. But you sure seem to have a LOT of time on your hands to post your nonsense on here and involve yourself in numerous disputes locally on the CB and amateur bands.

Do yourself (and us) a favor. Get a life, Eric. As it stands right now, you are a pathetic embarrassment to both the online and the amateur radio communities. I believe I speak for the majority of the people on this newsgroup when I say that we're tired of your nonsense on here. Please, for your own good, find something more productive to do with your time and cease with your petty bickering. We don't care to hear it.

I'm not surprised, I saw somewhere recently that there are still significant
sales of Win 3.1. Some people took exception to certain networking features
of Win 95, particularly educational establishments where the kids can get
up to all sorts of tricks with Win95. Perhaps they have sorted those
problems out now, I haven't checked recently.
Us Win 3.1 users can feel smug that we're immune from malicious Java code,
Active X controls, Out-of-band port 139 attacks, etc.
Given that you can get an old DOS/Win machine like the AT for about GBP 40-50
or less, which is quite sufficient to run basic comms functions in the shack,
it makes a lot of sense that there is a significant installed base of Win3
machines. Another thing is that if you develop software for the latest
machines but you want to check compatibility of the 16 bit version with older
machines, there is nothing better than having a real old machine to test it
on.

Is there anything to stop you from producing a fully featured Win95+ product
but restricting the win3.1 product feature set by use of conditional
compiler directives or whatever?

What we need to do is eliminate *all* amateur radio licenses, and have a single license class, the "Standard" license (and maybe a "Junior" license for people under 18 who wish to take a watered-down version of the tests.) This "Standard"/"Junior" license gives a wide range of privs with limited power.

Then, to operate a particular mode, you take a practical "operational" examination on that mode. You want SSB HF, you take a test. RTTY, take a test. And so on. Once you pass the test for that mode, you gain an endorsement for that mode, and are authorized for all freqs/power associated with that mode.

This is called "mode-based" testing. Every test you take you immediately gain additional operating privileges. It is not complicated (other than the fact there are "more" tests, but more tests with less license classes helps to ensure technical competence, something Carl and the anti-code crowd claim they want.)

Gentlemen,
I have a question for anyone that may have experienced "crackling" noise on their VHF repeater when the wind is blowing. Here is the scenario. We were donated a spot on a wooden utily pole which sticks out of the ground (the earth here is rock with a couple inches of soil over it) about 85 ft. There are 4x4 wooden cross arm systems at a couple places on the pole. At each cross arm there are 2) 4x4's bolted through the pole
with u-clamps at the ends. This is where the 2" pipes are clamped to the 4x4's for the antenna mounting. All 4 UHF machines work well. No noise. The VHF one does not. If the wind blows, the noise gets so strong it kicks incoming signals right out of the repeater. We have checked all antenna and feedline connections. They are good. What we did find was that if we wiggle or touch (with metal object) any (!!!ANY!!!) metal parts on the 4x4 support angle irons, 6 ga lightning ground wire which runs from the antenna mounts to central pole wire and down, pipes, anything metal at all, the noise is horrendous. What we suspect is that due to lack of RF ground, there is a pretty decent RF voltage/current, whatever, flowing or present on all the metal parts up there. If every piece of metal was bonded together and we nail copper flashing to the pole to connect RF grounds to, would this get rid of the dreaded "cracklies"?? How can we get a decent RF ground for VHF in the earth on top of this mountain? Any ideas would be more than greatly appreciated. Thanks for your help.

George

I believe the idea was to meet some liberal bureaucrat's idea of
"fairness" by making sure that everyone had access to the same
study materials ... it's a bonehead idea for sure, as you point out.

Maybe we can find a way to eliminate the published question
pools altogether while we're modernizing Part 97 in other ways
and updating license structures and test methods ...

Hi,

I just reworked my homepage, so come on down and check it out. I also have the latest 30-day evaluation version of WinHdg 2.0 (Windows Heading & Country Finder) available for downloading.

------------------SNIP the same old bull *&%$-----------------

What NONE of you people have explained is why we have to drop the code test to adopt "new technology and modernize". I don't understand why you think that can't be done with the code test in place. You can't purchase and use the latest and most advanced equipment because you have to take a code test? How does the code test stop this? Thats what I don't understand. I don't have on blinders and I'm very open minded. The fact that I have put up with your crap for so long is proof of that. OK, this is your shot! Explain it to me. How does the code test requirement prevent me or anyone from using the latest forms of communication technology if we choose to do so? This is an real question and I would like an real answer. Not just another worthless comment. Thanks in advance.

Wrong yet another time Cecil! To exclude some who is UNWILLING to learn is
NOT discriminatory. They have CHOSEN not to participate. And for those who
are UNABLE to learn, a system is in place to provide a waiver. So once
again you have demonstrated your inability to use simple logic.

Hi Cecil,
I have to say kudos to you on this one! I may not agree with allot you say,
but you are correct when it comes to proper operating procedure. You guys
might not like my ideas on code, but I do use proper procedure 100% on the
air. Some of the crap I hear on HF is a disgrace. Good idea.

>

For more information on the HW-8 than you will probably ever need and QRP in general you might consider subscribing to the QRP mailing list.

If you want to get on the list and then post your message for the HW-8 send a e-mail to listserv@lehigh.edu , in the body of the message type "subscribe firstname lastname call" or if you just want to look at the archived list try http://www.lehigh.edu/lists/archives/qrp-l

I haven't been on the list in quite sometime and I *assume* these addresses are still valid but if you have troubles post a query here for QRP-L and I'm sure someone will have an up-to-date address(es) for you.

Hi Carl,

I am also confident that Gary has the acumen and the ability to
speak up for himself in these matters without one of the faithful
stepping in the prop him up. I have chatted with Gary via direct mail
and although we disagree strongly on most of the philosophical questions
facing us on the CW and other amateur related issues. The tone of his
prose is consistent from public to private. I will give him that. But
I will stand on my observations that most postings regarding the CW
issues are mostly rabid and have in many cases turned into choppy
mantras rather than well thought out commentaries.

Bob, KE6F

Why's that necessarily so? Since the questions are prepared by
the VECs (I believe) are they not private information, as opposed to
government documents???

Seems there ought to be a way to do "the right thing" without
the government getting in the way ...

2961. NARCC problems-continued

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-14 00:00:00 UTC
From: Tom Sharples <sharples@hooked.net>
Message-ID: <337AB2B7.3200@hooked.net>
Source record: 198381
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Here are some further excerpts from recent e-mails to me, concerning Narcc's recent high-handed and unfair behavior toward some NOCAL repeater owners
(including me):

"NARCC has outlived their usefulness - I plan to put a new 440 Rptr on the air locally, soon - I aim to apply for clear frequency advisement from SHARKK - if nobody else is already using the spot I pick, I'm going to go for it -
NARCC can go to hell -"

"I can't comment too much on your current problems with narcc as I don't really know the deatails from both sides of the fence. I will, however, make some comments:

1. If what you say is true, narcc, and Don Smith, have overstepped their authority...they have no statutory or jurisdictional authority over anyone or anything. They are an advisory body only. I don't like to recommend anarchy as I believe we need a coordinating body, but heavy handed moralistic decisions will lead to just that.

2. I have had consistent problems with the 440 coordinator and believe that he is simply helping out his friends and begrudgingly granting sanction to his non friends if, and only if, that particular sanction does not interfere with his kingdom. We need to remember that this is amateur radio, and if you are a coordinator, it is your obligation to help the less educated, not belittle or simply ignore them. As long term repeater owners (my sanction goes back only to 1991), it is our obligation to educate and assist the "new guys", not lock them out."

"It would sure be interesting to get a copy of the NARCC mailing list. Not sure that would be possible, but if one had it, and could afford a couple hundred dollars in postage, he could sure drum up a showing at the next general meeting that would play havoc with this current board's agenda."

"So far, every system owner/trustee who has joined SHARKK has done so because of a bad experience with NARCC...a mass exit of NARCC membership is just a matter of time though, as more and more find out about us. So, get the word out to every repeater owner/trustee you know who is unhappy
with NARCC and doesn't know about SHARKK already."

>important, Eric.

He's been an annoyance on Fidonet for quite awhile too. I was a Fido sysop over a year ago, and for the 3 plus years I operated fido boards, he was quite a pain in the backside.
Most of it is trolling for flames, I believe, but this guy is actually impressed with himself and overestimates his importance.

>Yeah, I get it now. You're a pathetic little unemployed nobody.
>Possibly crippled. No life. Nothing better to do besides sit on
>the computer and the radio all day, drawing a government welfare
>check and causing problems for other people.

You're right, he is. He's supposedly blind, among other things, but instead of helping disabled folks take their rightful place in society, he's more interested in stirring up trouble and discontent.
Bored with his own existence, he looks for excitement where he can, and if he can't find it, tries to create some of his own.

Go away, Eric Annoyen, we don't need you here. Thought I lost you when I left Fidonet.

Btw, folks, don't take him too seriously and keep answering him, or he'll never go away.

> Which is EXACTLY what you egg heads do to the people who found the code
was
> easy and the theory was hard. So, if we use your faulty logic we should
> drop the theory and make the code test harder. See, won't float will it?

No, Grahm ... we realize that the theory is also harder for some that for
others
... and we're *not* suggesting a level of difficulty equivalent to an EE
degree
or the like, as MD and others often assert in their efforts to
unrealistically
frighten people about the results of reemphasizing the technical side of
ham
radio instead of clinging to 1847 beeper "technology" (Morse is so outdated
I just can't bring myself to call it "technology" without using the quotes)

But ... we also recognize the reality that the theory is a NECESSARY and
JUSTIFIABLE licensing requirement, while changes in technology and other
factors make it impossible to rationally justify continuing to force all
hams
to learn Morse code to obtain totally unrelated HF priveleges ...

Like it or not, the logic and rational justifications of theory vs. code
are sort
of like a diode ... they only work in one direction ...

Actually, we're not really talking about making the tests significantly
"harder"
in terms of the technical level ... just fixing the test methods so that
people
will have to really understand the necessary material instead of being able
to
"luck out" and guess their way through the test without really knowing

anything.
(that happens too much today ... MD is a perfect example ... he regularly brags
about how he memorized the answers without giving a hoot about what they meant or how things work ...) We don't want technically incompetent hams. They are far more likely to cause harmful interference, could possibly hurt themselves or others, and just generally give all hams a bad name and image ..

I hope I've clarified these points in a way that makes my position easier for
you to understand and agree with ...

>(barring new contradictory findings by engineers and scientists),

Basic theory has changed over the last 30 years as to what is
or isn't basic theory. The tests on theory in the 50s
had little or no references to semiconductors and lots on
vacuum tubes. That has totally changed, so the basics, have, in
fact changed.

Is this a good radio? I ought to know cause I actually have one, but I never use it!
Truth is I am actually considering trading it for an Icom Handheld, but before I do I thought I might ask all who might be reading this: Does anyone else have an FT3000m? They already have a pretty good receive range,,, can it's range be extended even more?
I've only noticed one or two other postings about the 3000m on various newsgroups, but in general it doesn't seem to be "Popular" as are many other models.
Anyway,, I would appreciate any comments good or bad.
Thanks, Aaron (curious)

I have had mine for 6 months. I find it very easy to use. Display
is fine except in direct sun. With the Pre-amp on, unit gets lots of
intermod, only a tiny little bit when the pre-amp is off. Then again,
most radios in this area suffer from at least some intermod. I guess
thats what one gets living in a valley that must have 500,000 pagers
in use and every hill or high bldg looks like a porcupine due to all
the commercial radios and I live 5 blocks from one of them.

This coming Sunday..

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
May 18th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

A discount sellers SEASON PASS is available for
$50 per space if purchased by April 20th.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

For packet your options are pretty much limited to DOS _OR_ Win95/NT. Win 3.x is such a lousy multitasker that it is useless platform for serial comms.

Just my five cents worth.

PS: more seriously, everybody I know either use DOS or a 32-bit platform for this type of use. I know of a few people still running 3.x for office aut. type of apps, only because of inadequate resources for Win32/NT.

Hello:

I enjoy using the CW mode very much. I use sending/receiving speeds
as required.

I am, for one, in favor of re-testing to renew ham tickets, but let's
not stop at retesting for CW only.... I would go along with retesting
theory and cw (at all speeds and all levels) anytime that I want to
renew my ticket. Certainly, we should start with retesting at 5 wpm so
that those that cannot send/receive at 5wpm are weeded out first.

Thanks for expressing a good idea, but I dont think you have gone far
enough.

73s,
Vince

Speaking entirely as a fellow who knows where his microphone is, but doesn't know if it works -- I agree; there are folks out there with FAR more valuable skills than Morse code proficiency.

A good number of them are doing useful work and documenting it in the Amateur Radio press; a good number are not. ARRL encourages them to do so; in fact, we have offered a number of times in QST and in this forum, for these people to write it up and send it in for consideration for QST and QEX (and other ARRL pubs.) I know of several other magazines doing the same thing.

I have clearly understood what your beliefs are about Morse Code testing. But, IMHO, the concept you offer is a house of cards; there is no fear among the beepers that technology will be brought into their lives. The sales of ARRL technical pubs tell us that most hams want to know more.

I have never once seen a "beeper" flame the technically competent for their technology, in this, or any other forum, for the existance of their technical competence. (I have seen flames for what has been characterized as technical "snobbery," but in that case it was the attitude, not the technlogy, being flamed.)

As an example of the general support for technolgy, Mr Coffman is well respected for his technical abilities and willingness to offer sound advice, even by those who occasionally disagree with some of his political views.

Are you really offering that the presence of Morse testing is what is stopping people from making technical progress? IMHO, the two are only barely related. There are 700k or so hams, some of whom have not passed a code test. If they really wanted to develop new and exciting modes, they would do so. I realize that some have offered that Morse code causes brain damage, but I don't believe that those who would develop this new technology could not because the Morse code test has prevented them from doing so.

One can discuss that Morse code should not be a mandatory part of Amateur Radio, but this idea that it is actually stopping technical progress is without significant merit. Oh, for sure, there may be a few high-tech types who would get into Amateur Radio if they could have HF access without a code test, but it was offered that these people would get into Amateur Radio and develop new technology on VHF without a code test, but, for the most part, it hasn't happened.

I have no fear a 5 wpm test ... I am sure that a week of evenings
at the computer with something like SuperMorse would get me
up to snuff. (I suspect I could pass 5 wpm with no brush-up, but
I used to be a Boy Scout ...) ... contrary to what some pro-coders
think, I really *did* learn Morse and actually used it considerably in
my early days ... because that was the only mode available on HF,
period, end of story. Had I been able to use SSB and RTTY and to
experiment with other modes (like those I was working on at work, for
example) I would have done all of that in a heartbeat and NEVER
used Morse again. BECAUSE I NEVER *LIKED* MORSE ... NOT
FOR ONE SINGLE MOMENT ... even though at my "peak" I could
pretty well copy a QSO at about 20 wpm (roughly, I never measured
it with precision, and I, unfortunately, didn't get an opportunity to take
a test ar that time, or I'd likely be an extra now ...)

Despite what the code bigots think, none of that makes me "less of
a ham."

However, I would submit that *IF* code speed is *REALLY* important
then it's *MOST* important that those who are licensed at the highest
levels (which, "of course" makes them "the most important" hams)
must, OF NECESSITY, be retested first, since if they aren't truly capable
of the blazing speeds *REQUIRED* for their higher class of license, they'll
obviously do the most serious, irreperable damage to hamdom, the world
in general, and the "reputation" of the ARRL, etc. ("IF" this *ISN'T* TRUE
then the entire argument that code testing is "necessary" at all falls
apart.)

SO, if you want to retest for code, then retest all the cranky, senile,
drunken, psycopathic olde fartz on 80m and 20m FIRST ... since less
than 40% of the ARRL-surveyed hams EVER use Morse, I doubt that

50% of those lids could pass a spot-check at their "license required"
code speed ...

Now, this cuts both ways ... since I voice the opinion that the theory
is the most important part, I'll happily volunteer to be retested in that
area ... I doubt that many of the undesirables I mentioned in the
preceeding paragraph could pass a *decent* technical test either.

> Thanks for expressing a good idea, but I dont think you have gone far
> enough.

Thanks for supporting a good idea ... but I don't think you're suggested
method of application is the most logical ...

Peter:

Thanks to you and everyone else who replied. Unfortunately, we will probably need to serve the Win3.1 market as well, and that *may* limit our feature set. I have received lots of responses that suggest that PC boatanchors end up in the shack, thus lots of them are running DOS and Win3.1. Most people I know run a little higher-end setup, so I was curious.

We'll see what it will take to address the needs of Win3.1 users.

Dave

> Old Farts? That's a broad assumption. I'm only 34. How old are you?
>
> K4XA
> Graham

Actually, Graham, I'm going on 47, but I'm NOT an "olde farte" ... an "old
timer" in some people's eyes, perhaps ... almost ready for QCWA in fact ...
but NOT an "olde farte"

You, on the other hand, even at 34, appear by the attituded that you
express
to be a perfect demonstration that one does not need to be chronologically
old to be an "olde farte" ... you see, it's NOT a matter of chronological
age at
all, but rather of attitude, openness to new ideas, spirit of
exploration/invention,
refusal to accept stagnation, etc.

Yes, Graham, it would appear that, unfortunately, even at your relatively
tender
age, you have chosen to figuratively senilify yourself, don a set of
blinders that
prevent you from openly considering, accepting, or even tolerating new
ideas,
actively lobby for technicological stagnation, and discriminate_against,
ridicule,
and shun those who have not (whether forcably or willingly) espoused the
same
narrowminded, bigoted philosophy ... YUP, you're an "olde farte."

How sad ... another mind bites the dust ...

Carl - wa6vse
wa6vse@fast.net

p.s. I hestiate to mention it, because it's really a "downside" rather
than an
"upside," but since you obviously needed clarification on what constitutes
"an olde farte" and since I try to do a thorough and complete job of
providing
information when it's requested, I should probably (reluctantly) point out
that
all of the above would appear to make you an IDEAL candidate for membership
in both the ARRL (that's Archaic Retro Radio Luddites) and FISTS (that's
Fanatical Idiots Supporting Technological Stagnation) ... both groups hold
views
that correlate with yours and would, I am sure, welcome another olde farte
like
you with open arms ...

p.p.s. Enjoy your new life as a "Stepford Ham" ...

Amateur testing, although done now by VEs, is probably not any easier, or harder, than it was 20 years ago. Taking the premise that the FCC is out of the business forever, other than expanding the size of the pools, how would you change the basic methodology? (I ask this question hoping to see some sound ideas discussed on this topic, not because I think there is no good answer!)

>Testing needs to be made relevant and methodology fixed to assure
>that applicants really understand the radio/electronics theory, rather
>than having simply stuffed some answers into short term memory.

I think most hams, and the various VECs agree -- we could use more questions in the question pools. This needs to be balanced by a bit of reality -- most of the VECs are staffed by volunteers and developing lots of questions takes lots of time. By my interpretation of Part 97, using "variables" for the Ohm's law questions would require some rules changes. Getting more questions would require more work by people who are already devoting a large number of personal hours. (Even those VECs with paid staff must consider the costs of staff time.) I recall the last time the pools were about to be revised, the VECs and Question Pool Committee put out the call for folks to contribute input and questions; there were relatively few. Was your input among them?

>And there'd be a LOT more of that if the Morse hazing ritual were

>distrust by a bunch of incompetent olde fartz who can't understand
>the benefits and fear what they can't understand ... you know, the
>"get the hell off of 'MY' frequency with that newfangled digital stuff"
>crowd ...

I understand at least the concepts of most digital modes. I do not fear them. But if one starts QRMing my CW contact, I will want him or her to move. The same should be said if I cause interference to any other amateur communication, of any mode.

>If more hams were more technically comptent, they'd be more

When I have conducted a troubleshooting workshop at various conventions, I usually talked to a packed room. These people wanted to know more about troubleshooting electronics.

>In fact, if hams were more technically competent, they might
>actually BUILD more of their own gear ... either from scratch
>or from kits (a resurgence of kits would certainly occur if there
>were more people capable of building them).

When I go to hamfests and flea markets, I see row upon row of tables, filled with parts and other fine junque. I see hams buying these parts and taking them out to their cars. I have to presume they are doing something with them. The kits.txt list on our web page is among the top 10, last time I looked.

At least you admit that, Ed ... in all honesty, I'm surprised that the
ARRL doesn't sanction you for making such heretical statements.

> I have clearly understood what your beliefs are about Morse Code testing.

I understand that you understand my position and also that I am unlikely
to convert you to my views, Ed ...

> But, IMHO, the concept you offer is a house of cards; there is no fear
> among the beepers that technology will be brought into their lives.

In a sense, I agree ... the beepers don't "fear that technology will be
brought into their lives" ... they know full-well that they have the right
and ability to refuse to admit it (to their personal repertoir) ... what
they
fear is that widespread adoption of new technology will "harm them"
in the following ways ...

1) cause change ... change is the intoduction of an unknown
and they fear the unknown because it is unfamiliar ...

2) demonstrate the backwardness and outdatedness of their
"favorite mode(s)"

3) demonstrate that they, personally, have fallen far behind "the
power curve" in the sense that their technical knowledge and
abilities are so outdated as to be virtually useless in today's
world ...

5) force them to accept the eventual demise of their "favorite mode(s)" through voluntary disuse by others interested in more modern techniques (I mean do they *really* believe that the future, real-life, equivalents of the Star Trek comm badge will actually use Morse???)

6) force them to accept others with new ideas who don't subscribe to all the "age-old, sacred dogma" that they were brainwashed into in a byegone age ...

(I could go on for several pages ... none of it good, or healthy for ham radio, but all of it perfectly true ...)

> sales of ARRL technical pubs tell us that most hams want to know more.

Forgive me, but I've seen ARRL "technical pubs" ... most are so absurdly outdated as to render them laughable ... those that even attempt to deal with modern technology tend to do so at such novice levels that they should be virtually useless to anyone who already posesses the technical acumen that should be required for a basis license ...

> I have never once seen a "beeper" flame the technically competent for
> their technology, in this, or any other forum, for the existance of
> their technical competence. (I have seen flames for what has been
> characterized as technical "snobbery," but in that case it was the
> attitude, not the technlogy, being flamed.)

But, Ed, you yourself have admitted (with great courage and possibly peril of sanction by your handlers at "HQ") that there are "folks out there with FAR more valuable skills than Morse code proficiency" ... but, the mere mention of this fact brings accusations from the pro-coders (MD, Conn, and a plethora of others) of technical "eletism," "snobbery," and "wanting to create an exclusive playground where only EEs can enter."

All of which is, of course, hogwash, but nonetheless clearly elaborates the degree of fear and contempt that the beepers have for technology and anyone who dares to suggest that technology is a "good thing" that should be promoted rather than buried and dares to voice the heretical view that "for practical purposes, Morse has outlived the point where it should be a 'skill' required to obtain an amateur license with full HF priveleges."

> As an example of the general support for technolgy, Mr Coffman is well
> respected for his technical abilities and willingness to offer sound
> advice, even by those who occasionally disagree with some of his
> political views.

Aw, come on, Ed ... Gary gets flamed *almost* as much as I do ... I'm sure the main reason that he seems to draw less flames than I do is that his "style" is a bit more "gentlemanly" than mine ... I admit that I'm brash
and outspoken and make no appology for the way I am ... I have no problem in calling a cretin a cretin ... but if I find out later that the person

in question is only "slow" and not truly a cretin, I'll be man enough to admit
my error and make a public appology ... <grin>

COLS COLUMN

I HOPE YOU ARE ALL ENJOYING THIS ANZAC WEEKEND...
CONTINUING THIS WEEK WITH THE EARLY COMMUNICATIONS SERIES,
AND IN PARTICULAR THE WORK OF MICHAEL FARADAY THAT ENABLED
THE TELEGRAPH TO DEVELOP.

FARADAY (1791-1867) WAS AN ENGLISH CHEMIST AND PHYSICAL
CHEMIST. HE DISCOVERED INDEPENDENT OF JOSEPH HENRY,
ELECTROMAGNETIC INDUCTION. HE ALSO DISCOVERED THE LAWS OF
ELECTROLYSIS AND THE RELATIONSHIP BETWEEN LIGHT AND MAGNETISM.
HE ALSO SPENT A GREAT DEAL OF TIME ON CAPACITANCE AND
DISCOVERED THE IMPORTANCE OF THE DIELECTRIC CONSTANT.

HE CALLED THIS 'SPECIFIC INDUCTIVE CAPACITY'. HE STARTED HIS
CAREER AS AN ASSISTANT TO SIR HUMPHREY DAVY.

FARADAY'S TELEGRAPH WORK CONSISTED IN THE MAIN OF
INVESTIGATING THE PROBLEMS INVLOVED IN SIGNALLING THROUGH
UNDERGROUND AND SUBMARINE CABLES. THERE IS NO EVIDENCE OF HIS
CONTRIBUTING DIRECTLY TO THE EARLY TELEGRAPH. THIS IS
SURPRISING SINCE AT THE TIME OF FARADAY'S WORK, THE TELEGRAPH
WAS THE ONLY PRACTICAL ELECTRICAL APPLICATION. PROBABLY HE WAS
WHAT IS NOW CALLED A SCIENTIFIC RESEARCH WORKER. HIS

EXPERIMENTS WITH ELECTROMAGETISM HOWEVER, ENABLED A GREAT LEAP FORWARD, ADVANCING THE WORK OF EARLIER TELEGRAPH CONSTRUCTORS MORE THAN ANYONE. AS WITH HENRY'S CASE A LOT OF FARADAY'S WORK FOUND APPLICATIONS TO TELEGRAPHY AND TELEPHONY A LONG TIME AFTER HIS ORIGINAL EXPERIMENTS.

FARADAYS WORK ON ELECTROMAGNETISM CLOSELY PARALLED THAT OF HENRY. UNLIKE HENRY HOWEVER HE KEPT A DAY BY DAY RECORD OF HIS WORK. HIS DIARIES SHOW A COMPLETE RECORD OF THE DATES WHEN AN IMPORTANT DISCOVERY WAS MADE. THE EXPERIMENT WITH THE WIDEST APPLICATION TO THE TELEGRAPH AND TELEPHONE, AND YES EVEN THE RADIO, WAS HIS FAMOUS DEMONSTRATION ON THE 29TH AUGUST 1831, OF INDUCTION BETWEEN TWO COILS OF WIRES WOUND ON AN IRON RING. THERE IS EVIDENCE SUGGESTING FARADAY WORKED ON THIS EXPERIMENT AS EARLY AS 1821.

THATS ALL FOR THIS WEEK, NEXT WEEK FARADAYS INDUCTION EXPERIMENT WILL BE DESCRIBED.

73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(18 APRIL - 24 APRIL)
ISSUED ON 25 APRIL 1997

SUMMARY
Date 18 19 20 21 22 23 24
10cm 70 70 70 70 71 69 70
A 14 13 6 15 17 11 (14 ESTIMATED)
T 22 11 10 9 -6 -4 9

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

GEOMAGNETIC ACTIVITY AT LEARMONTH W.A. WAS QUIET 20TH AND 23RD; QUIET TO ACTIVE ON 18TH AND 19TH; QUIET TO MINOR STORM 21ST AND 22ND; ACTIVE EARLY, THEN QUIET TO UNSETTLED ON 24TH. FIGURES AVAILABLE FOR DAYLIGHT HOURS ONLY ON 23RD OWING TO SITE POWER SUPPLY WORK DURING NIGHT HOURS.
FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH SOME ENHANCEMENT TO 20 PER CENT ON 18TH. THERE WERE SOME DEPRESSED PERIODS ON 22ND (TO 25 PER CENT); AND 23RD (TO 15 PER CENT). SPREAD F WAS NOTED DURING LOCAL NIGHT ON 21ST, AND 23RD TO 24TH.

FORECAST (25 APRIL - 01 MAY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED 25-26 APRIL; QUIET 27 APRIL ;
UNSETTLED 28 APRIL - 1 MAY, ACTIVE PERIODS
POSSIBLE DURING LOCAL NIGHT HOURS.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES. GOOD HF
CONDITIONS EXPECTED 27 APRIL. HIGH LATITUDE HF
COMMS MAY BE DEGRADED DURING LOCAL NIGHT HOURS,
25-26 APRIL AND 28 APRIL 1 MAY.

Notes of Interest:
Union of Radioficionados Espanoles (URE) in Spain has organized a dxpedition to Annobon Island with the call 3C0DX from May 20 to 27. QSL via EA4URE. The published information indicated ssb,cw and RTTY. The group has a web page http://www.ure.es/3C0DX.html Mateo (TEO), EA6BH, an experienced RTTY op is a member of the group.

Jean Jacques (ex-J28JJ) is reported active on RTTY on Saturdays from the club station A71A

Peter, DL5FF/OH0JWL and Hade DJ2PJ/OH0JWH will be active from Aland Island the last week of April into May and will participate in the Volta RTTY DX Contest

5H3HG (Harol) says he active on RTTY and to be on the look-out for him.

HA7VK (EX: XU7VK), Sanyi, starts as YI9VK on May 12 from Iraq and will be there a couple months including RTTY

Mario, 4S7BRG, told K2YG he will try to be active expecially on the weekends. This weeks RTTY NOTES indicates he is active mostly weekends until May 30. His home call is HB9BRM

S79MAD, Paddy, is back after a holiday back home in GW-land. After overcoming some Murphy related problems he is back on the air for the next 4 months before heading home. He indicated to me he would be active expecially on the WARC bands, including RTTY. He was active a bit this last week on 18.103 RTTY. If you are interested in WARC RTTY action please e-mail him at aresy at seychelles.net. This last week we tried 30 meter RTTY at 0300z (sunrise in S79) with no propagation.

For next weeks bulletin send your bandpass and notes of interest to Luciano at i5fln at zs5s.zaf.af or i5fln at iot.it

73's and Good DX de Randy wx5l wx5l at I-10.net

ARLD018 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX bulletin, The 599Rpt, 425DXnews, DXNS, DXNL and Contest Corral from QST. Thanks to all.

SCARBOROUGH REEF, BS7. It is reported that the 1997 BS7H DXpedition to Huang Yan Dao, Scarborough Reef, will start on April 28.

EASTERN MALAYSIA, 9M6-8. Michael, DF8AN, is QRV as 9M8/DF8AN, and can be found using CW on 20 meters. His length of stay unknown. QSL to home call.

RWANDA, 9X. Mark, ON4WW, is QRV as 9X4WW. QSL via ON5NT.

ANGOLA, D2. Pete, OH3MEP, is QRV as D2M on CW. QSL via OH3LQK.

JUAN DE NOVA ISLAND, FR. FR5DJ/J and FR5KH/J will be active on all bands, using CW and SSB until May 15. QSL via F6FNU.

SOLOMON ISLANDS, H4. DL2GAC will be QRV as H44MS, probably from Renell Island, IOTA OC 127. QSL to home call.

GIBRALTAR, ZB. G3RFX will be active as ZB2FX until May 6. His operations will include activity on 160 meters and RS-12. QSL to home call.

SAINT HELENA, ZD7. Johnny, ZD7WRG, is QRV on 6 meters with a magnetic loop. He has been able to hear the V51 beacon and some South American stations. QSL via WA2JUN.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 301 - EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR The

Daily DX, WB2YQH DXReport, N4GN, W5IJU & Island/DX News, K7JJ, W9UI, CT1EE, 9K2HN, DJ5AV DX News Letter, F6AJA, G4BUE DX News Sheet, HA0HW, JA1ELY, JH1NBN and LZ4BU for the following DX information.

8R, GUYANA. Yuki, JH1NBN, will be active as 8R1ZB from April 25-29th. Activity will be on CW, SSB and RTTY with operations on 14-10 meters. QSL via JH1NBN.

A5, BHUTAN (Keep Your Fingers Crossed On This One!). The DX News Sheet reports Charlie, K4VUD, will try to be active in July while visiting Nepal (9N).

BV, TAIWAN. The DXReport states Johannes, DL5AUJ, will visit his friend Hans, BV3/DL4AMJ, in Taiwan from May 5-13. He will be active as BV3/DL5AUJ on all bands. He will also take part in the CQ Mir DX Contest May 10-11th, as BV0THU along with members of the University Hsin-Chu. QSL via DL5AUJ.

C6, CROOKED ISLANDS (Bahamas). Look for C6AJR to be active May 30th to June 2nd. The Crooked Island has an IOTA of NA-113 and is located in the South Bahamas Group. Operations will be on 80-6 meters. QSL via Joe Pater, WB8GEX, 1894 Old Oxford Rd., Hamilton, OH 45013 U.S.A.

HB0, LIECHTENSTEIN. The DX News Letter reports that DJ9SI, DJ8KI and DL8SET will be active from Triesenberg on 80-2 meters from May 7-11th. QSL via DL8SET.

J8, ST. VINCENT. After his activity in 8R-land Yuki, JH1NBN, will be active as J83ZB from April 29th to May 4th. Activity will also be on CW, SSB and RTTY with operations on 14-10 meters. QSL via JH1NBN.

KH0, MARIANA ISLANDS. The Island/DX News reports KH0SI is active from Saipan, often between 1000 and 1200z on 14175 kHz.

ST, SUDAN. Sayed, ST2SA, has been active. Best times to work him is on Saturdays and Sundays between 2000 and 2400z on 20 meters. He does have an antenna for 10, 12, 15, 17 and 20 meters. QSL via the CBA.

YI, IRAQ. Sanyi, HA7VK (ex. XU7VK), will be active as YI9VK starting May 12th. He will be there for a couple of months and will be operational on the HF bands with 500 watts on CW, SSB and RTTY. QSL via HA0HW.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the

President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA
at VK2WI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or fax to (02) 9672-3392, or by
packet to VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or patl(at)extro.ucc.su.oz.au

mornings and on 80 Metres Sunday evenings.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 957 04 MAY 1997

COLS COLUMN

MICHAEL FARADAY WROTE A PAPER IN 1831, THE TEXT OF WHICH
DESCRIBES HIS EXPERIMENTS WITH ELECTROMAGNETISM. HE HAD
DISCOVERED THAT AN ELECTRIC CURRENT WAS INDUCED IN A COIL OF
WIRE IF A MAGNET WAS PASSED THROUGH IT. HE THOUGHT THAT
PERHAPS A CURRENT COULD BE INDUCED IN A COIL BY ANOTHER CLOSE
TO IT AND THROUGH WHICH A CURRENT WAS FLOWING.

JOSEPH HENRY HAD USED AN ELECTRO-MAGET TO WIND HIS COILS ON.
FARADAY USED A SOFT IRON BAR THAT HAD BEEN WELDED INTO A
CONTINUOUS RING. THE IRON BAR WAS SEVEN EIGTHS OF AN INCH
THICK AND WELDED INTO A RING, THE OUTSIDE DIAMETER OF WHICH
WAS 6 INCHES. CALICO WAS PLACED AROUND THE RING AND THEN
UNINSULATED WIRE WAS USED TO WIND THE COIL. EACH TURN WAS
CAREFULLY INSULATED FROM THE OTHER BY A WINDING OF STRING AND
EACH LAYER OF WINDINGS WITH ANOTHER LAYER OF CALICO. TWO COILS
WERE WOUND ON OPPOSITE SIDES OF THE RING AND COMPLETELY
SEPARATE FROM EACH OTHER.

THE ENDS OF ONE COIL WERE CONNECTED TO A GALVANOMETER 3 FEET FROM THE IRON RING. THE ENDS OF THE OTHER COIL (NOW CALLED THE PRIMARY) WERE CONNECTED TO A BATTERY. AT THE MOMENT OF CONNECTION TO THE BATTERY, THE GALVANOMETER GAVE A MOMENTARY DEFLECTION AND THEN RETURNED TO THE ZERO POSITION. THE CURRENT WAS STILL FLOWING IN THE PRIMARY COIL. AS THE BATTERY WAS DISCONNECTED THE GALVANOMETER AGAIN DEFLECTED MOMENTARILY. IN OTHER WORDS, AN ELECTRIC CURRENT FLOWED IN THE SECONDARY COIL WHEN THE CURRENT IN THE PRIMARY CHANGED. FARADAY HAD MADE HIS FIRST TRANSFORMER.

FARADAY CALLED HIS DISCOVERY 'ELECTROMAGNETIC INDUCTION', IT WAS OF NO PRACTICAL USE BECAUSE DIRECT CURRENT ONLY WAS BEING USED AT THE TIME. IN OUR MODERN DAY OF USING ALTERNATING CURRENT FOR COMMUNICATIONS THE TRANSFORMER IS INDISPENSABLE.

WE CONTINUE WITH MICHAEL FARADAY NEXT WEEK, FOR NOW 73S
DE COL VK2CTD

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(25 APRIL - 01 MAY)

ISSUED ON 02 MAY 1997

SUMMARY
Date 25 26 27 28 29 30 01
10cm 69 71 73 72 72 73 72
A 8 5 4 3 3 13 (15 ESTIMATED
T 7 4 9 9 14 11 17

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

GEOMAGNETIC ACTIVITY AT LEARMONTH W.A. WAS QUIET 26TH AND 27TH; QUIET TO UNSETTLED 25TH AND 28TH; MOSTLY QUIET TO UNSETTLED, WITH AN ACTIVE PERIOD, ON 30TH; AND QUIET TO UNSETTLED ON 1ST TO 13UT, THEN ACTIVE AFTER A SUDDEN IMPULSE AT THAT TIME. THERE WAS NO REPORT ON 29TH DUE TO MAINTENANCE WORK.

FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES EXCEPT FOR 29TH WHEN THERE WAS ENHANCEMENT TO 20 PER CENT DURING LOCAL NIGHT.

FORECAST (02 MAY - 08 MAY)

SOLAR VERY LOW

GEOMAGNETIC: ACTIVE TO MINOR STORM ON 2 MAY. UNSETTLED 3 MAY, THEN QUIET TO UNSETTLED FOR REMAINDER OF WEEK.

FREQUENCIES: DEGRADED/DEPRESSED 15 PERCENT IN SOUTHERN REGION (MID TO HIGH LATITUDES) ON 2 MAY. NEAR PREDICTED MONTHLY VALUES FOR REMAINDER OF WEEK.

NOTES OF INTEREST:

GUYANA, 8R. Look for Yuki,JH1NBN signing 8R1ZB from April 25 until April 29 on ssb, cw and RTTY. QSL via home call.

ST. VINCENT, J8. From 29 April till May 4 Yuki will than operate as J83ZB. QSL via home call.

MALDIVES, 8Q. Juanjo, EA2BP and Jose, EA2CLU will be operating from May the 4th to May 14th activity may include also RTTY. Qsl via home calls.

RHODES, SV5. Five Hungarian amateurs will sign /SV5/p from June 3rd to June 17. They will be on the air 24 hours a day on all HF bands. Qsl via home calls.

LIECHTENSTEIN, HB0. Between May 7 to May 11 DJ9SI, DJ8KI and DL8SET will operate from near Triesenberg at 1600 mtr. from sea level. They promise to be active also in Pactor. Qsl homecalls.

SCARBOROUGH, BS7H. Latest infos report they should start activity 30 April for approximately seven days. RTTY qrg used will be 14083 and 21083. The operating team requests that DXers who worked the BS7H '95 operation refrain from making additional QSOs on the same band-mode. Similarly, RTTY QSOs on multiple bands are discouraged. QSL via JA1BK (Japan stations only) and W4FRU (all the others).

The VK2SG RTTY DXNOTES are also available on Internet at reflector digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/rtty.html

For next week's bulletin send your bandpass to Bob, WB2CJL@W5KSI.#NOLA.LA.USA.NA or e-mail wb2cjl@juno.com

ARLD019 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, Toshi, JA1ELY, 425dxnews, FMRE and Contest Corral from QST. Thanks to all.

MAURITIUS, 3B8. Fred, F6DBZ, will be QRV from here as 3B8/F6DBZ using CW and SSB, from April 26 to May 21. QSL to home call.

SPAIN, EA. Club station EA2URD will sign EG97CMC until October 12 to celebrate the 1997 World Cycling Championship in San Sebastian. Activity will be on all bands and modes. QSL to EA2URD.

SWITZERLAND, HB. Special Event Station HB4FG will be QRV April 26 and 27 in celebration of the 90th anniversary of the Firemen of Cavergno. Look for CW and SSB operations on 80, 40 and 20 meters. QSL via bureau.

BULGARIA, LZ. In commemoration of the 2nd IARU High Speed Telegraphy Championship taking place in Sofia, Special Event Station LZ0HST will be active until October 30. QSL via bureau.

SUDAN, ST. Sid, ST2SA, has been active from here. Look for him to be QRV on Saturdays and Sundays between 2000 and 2400z on 20 meters. QSL via CBA.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 302 - EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR and The Daily DX, WB2YQH DXReport, WA2MOE, K4YT/DL4YT, N4AA and QRZ DX, WD8MGQ, DJ5AV and DX News Letter, EA6XX, F6AJA, G3SWH, GM4FDM, JA1ELY, OE3KLU and UA9XEN for the following DX information.

3X, GUINEA. Philippe, F5IEV (ex-TR8LVP), now signing 3XY3A, from Conakra, will be active until June 15th. He can usually be found active on 14020 and 14130 kHz. He has also been reported on 21236 kHz between 1730 and 1830z. QSL via F5IEV.

8Q, MALDIVE ISLANDS. Mike/OE3MZC and his XYL Barbara/OE3YCB, will be active from Rashdu-Atoll (Island Kuramati) from April 30th to May 14, as 8Q7MZ and 8Q7BZ, respectively. Activity will be on all HF-bands but mostly on the IOTA frequency of 14260 kHz. The pair will be using a TS-50s with 100 watts and a dipole antenna hanging from a palmtree. The island's measurements are 2500m long by 500m wide, and it is one of the largest island in Maldives. QSL via the bureau homecall or via their QSL Manager OE1PYA or direct to PO BOX 96, A-1234 Vienna, Austria, EUROPE.

D2, ANGOLA. Stu, WAMOE, reports to OPDX that he is the new QSL manager for D2EB. Send cards direct, no bureau cards. Meanwhile, Gabriele, D2EB, can usually be found on or around 21222 kHz at 1100z or between 1730 and 1900z. Also, check 14240 kHz at or around 2215z.

FR, REUNION ISLAND. Helmut, DJ4VW, will be active from here May 1-15th, as FR/DJ4VW. Activity will be on 160-10 meters.

He likes operating on 17 meters, so look for him 18165 kHz.

HS, CHANG ISLAND. A DXpedition to this Thai island (IOTA AS-125), located in the 'Gulf Of Thailand North East Group', may take place on May 7-11 with the callsign HS50A or HS2A.

NEW BEACON. Toshi, JA1ELY (Editor of 'The 59 Magazine'), reports a new 10 meters beacon is running in Japan. The beacon's callsign is JA7ZMA and operates on 28.188 MHz from Fukushima (Grid Locator-QM07). It is running on 50 watts from a stacked turnstile dipole at 700m above sea level and transmits 'VVV DE JA7ZMA JA7ZMA JA7ZMA QM07' (5 sec QRX then repeat).

SPECIAL EVENT STATION. Look for activity by TM2VH from the War Muesum in France which will be opening on May 10 to 11th.

S7, SEYCHELLES. The 'DX News Letter' reports that Paddy, S79MAD, has returned from his stay in GW and is back on air for four more months. Activities will include RTTY on the WARC bands. QSL via GW4WVO.

T30, WEST KIRIBATI. As reported in last week's OPDX.301, Tada, JA1WPX, will be active as T30WP. He was reported on 20 and 40 meters CW. Check around 7003 kHz between 0930 and 1200z and around 14014 kHz between 0130 and 0315z. QSL via JA1WPX.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries caned at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 957 11 May 1997

COLS COLUMN

WE CAN ONLY GUESS THE DISAPPOINTMENT THAT HENRY MUST HAVE FELT
WHEN FARADAY PUBLISHED HIS WORK ON ELECTROMAGNETIC INDUCTION,
THEREBY LOSING THE CREDIT FOR THE DISCOVERY. HE WAS HOWEVER A
GENEROUS MAN AND PUBLICLY GAVE FARADAY FULL CREDIT.

FARADAY'S OTHER GREAT WORK THAT BENEFITED ELECTRICAL KNOWLEDGE
AND OF COURSE TO THE EARLY TELEGRAPH, CONCERNED ELECTROSTATIC
CAPACITY, THE UNIT OF CAPACITY, THE FARAD, BEING NAMED FOR
HIM. HE STUDIED THE 'LEYDEN JARS', EARLY ELECTROSTATIC DEVICES
AND THIS LED TO THE USE OF 'CONDENSERS', WHICH WE NOW CALL
CAPACITORS. HIS DISCOVERIES ON CAPACITORS, LATER ENABLED RAPID
SIGNALLING THROUGH LONG SUBMARINE CABLES.

HENRY AND FARADAY MET IN 1837, IN ENGLAND. HE WAS PRESENT WHEN
FARADAY, WHEATSTONE AND OTHERS WERE ATTEMPTING TO MAKE AN
ELECTRIC SPARK USING A THERMOPILE. THEY WERE UNABLE TO PRODUCE
A DRAMATIC EFFECT. HENRY, REMEMBERING HIS WORK ON SELF-
INDUCTION, COMPLETED THE CIRCUIT FOR THEM BY ADDING A LONG
WIRE WOUND ON AN IRON CORE. THIS TIME A GOOD SPARK WAS
PRODUCED AND FARADAY IS REPORTED TO HAVE JUMPED UP FROM HIS
CHAIR AND CONGRATULATED HENRY.

FARADAY TREATED HENRY WITH HONOUR, INTRODUCING HIM TO SEVERAL OF THE SCIENTISTS OF THE DAY, BUT HE WAS UNABLE TO PERSUADE HENRY TO ADDRESS THE ROYAL INSTITUTION.

THERE WE END OUR STORY OF HENRY AND FARADAY, IT GIVES AN IDEA OF THE STATE OF KNOWLEDGE OF ELECTRICAL ENGINEERING IN THE FIRST FEW DECADES OF THE NINETEENTH CENTURY. IT WAS IMMEDIATELY FOLLOWING THESE DISCOVERIES THAT W.F. COOKE IN ENGLAND AND SAMUEL MORSE IN AMERICA INTRODUCED THEIR SYSTEMS. ANOTHER COINCIDENCE OCCURED WITH THE DEVELOPMENT OF BOTH SYSTEMS. THE NEXT PART OF OUR EARLY TELEGRAPH SERIES CONTINUES WITH THE ENGLISH SYSTEM FOLLOWED BY THE AMERICAN.

W.F. COOKE (1806-79) WAS BORN IN ENGLAND AND BECAME AN OFFICER IN THE INDIAN ARMY. HIS HEALTH SUFFERED IN INDIA AND HE WAS INVALIDED OUT OF THE ARMY. HE STUDIED ANATOMY IN PARIS AND HEIDELBERG AND DURING THIS TIME BECAME INTERESTED IN THE TELEGRAPH, AS MANY OTHER MEDICAL MEN HAD. HE WAS LATER KNIGHTED FOR HIS TELEGRAPHIC WORK.

THATS ALL FOR NOW,

DON'T FORGET THAT ANARTS WORLD-WIDE RTTY CONTEST TAKES PLACE NEXT MONTH.

73S DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(02 MAY - 08 MAY)

ISSUED ON 09 MAY 1997

SUMMARY
Date 02 03 04 05 06 07 08
10cm 72 71 71 72 72 72 72
A 17 10 9 7 5 4 (5 ESTIMATED)
T 18 13 12 11 14 19 15

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET OR QUIET TO UNSETTLED DURING THE PERIOD, EXCEPT FOR 2ND MAY WHEN THE FIELD WAS UNSETTLED TO ACTIVE. THERE WERE BRIEF ACTIVE PERIODS ON 3RD AND 7TH MAY.

FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES THROUGHOUT, WITH SPREAD F REPORTED DURING LOCAL NIGHT ON 3RD AND 4TH.

FORECAST (09 MAY - 15 MAY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE LEVELS EXPECTED ON 9 MAY, THEN QUIET TO UNSETTLED FOR REMAINDER OF THE WEEK.

FREQUENCIES: UP TO 15 PER CENT DEPRESSIONS FOR SOUTHERN REGION
(MID TO HIGH LATITUDES) ON 9 AND 10 MAY, NEAR
PREDICTED MONTHLY VALUES FOR REMAINDER OF THE WEEK.

COURTESY OF IPS RADIO AND SPACE SERVICES

RTDX0502 RTTY DX
VK2SG RTTY DX NOTES FOR WEEK ENDING 2 MAY 97 (BID RTDX0502)

Our information this week came from: DJ3IW and the Central-Europe DX Cluster node DB0SPC, DJ5AV, EA5XX, I5FLN and the IK5PWJ Packet Cluster, IK1HSR, KB8NW and the OPDX Bulletin, OH2BUA, ON6RO, W2JGR and the NJ0M node the Twin-Cities DX Packet Cluster, W5KSI, and WX5L.

Thank you all for your assistance.

NOTES OF INTEREST:

ANNOBON ISLAND, 3C0. Organized by U.R.E. (Spains Radioamatuer Association), will be signing 3C0DX from Annobon Island. 3 complete stations, from 20 May to 27 May 24 hours a day for the whole week. All bands including satelitte and 50 mhz, CW, SSB and RTTY. The operators will be, EA4BPJ, EA3AOK, EA3BT, EA1QF, EA4BT, EA5GRC, EA6BH, EA6WV, EA7KN, EA7JB OH0XX, OH1RY, and W9EVI. QSL EA4URE.

SEYCHELLES, S7. Paddy, S79MAD, has finished his stay in GW and is back on air for four more months. Activities especially in RTTY on the WARC bands. QSL via GW4WVO.

The VK2SG RTTY DX Notes can also be found on the Internet at reflector digital-dx at st.rim.or.jp and the OH2BUA Webcluster at URL http://www.clinet.fi/ jukka/rtty.html

ARLD020 DX NEWS - EXCERPTS

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, Tim, N4GN, DXNL, 425 DX news and Contest Corral from QST. Thanks to all.

GUINEA, 3X. Philippe, F5IEV, is now signing 3XY3A from Conakry, and will be active until June 15. He can usually be found on 14020 and 14130 kHz. He has also been reported on 21236 kHz between 1730 and 1830z. QSL to home call.

SRI LANKA, 4S7. Mario, HB9BRM, is QRV as 4S7BRG until May 30 and is working RTTY on the weekends. QSL via bureau.

MALDIVES, 8Q. Mike, OE3MZC, and his XYL Barbara, OE3YCB, will be active as 8Q7MZ and 8Q7BZ, respectively, from Rashdu Atoll, Kuramati Island, until May 14. Activity is expected on all bands, with preference given to the IOTA frequency of 14260

kHz. QSL via OE1PYA.

TAIWAN, BV. Johannes, BV3/DL5AUJ, will be QRV from the QTH of Hans, BV3/DL4AMJ, from May 5 to 13. Both will participate in the MIR Contest as BV0THU. QSL to DL5AUJ.

FRANZ JOSEF LAND, R1FJ. Nick, R1FJV, will be QRV from here for the rest of 1997. He can be found on 40 to 10 meters, using mainly CW. QSL via UA3AGS.

SEYCHELLES, S7. Paddy, S79MAD, will be QRV from here for four months. Activities will include RTTY on the newer bands. QSL via GW4WVO.

FALKLAND ISLANDS, VP8. Duncan, G0NWY, will be QRV as VP8CEH until October 1997. QSL via home call.

Ohio/Penn DX Bulletin No. 303
Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR and The Daily DX, WB2YQH DXReport, N4AA and QRZ DX, K5CNF, W5IJU and Island/DX News, WZ8D, WB8GEX, 9A2TW, DJ5AV and DX News Letter, EA5XX, G3NOM, G4BUE and DX News Sheet, GJ4ICD, JA2KVB, JA4DND, JH3XDO, RU6BV and SM7PKK for the following DX information.

5A, LIBYA. Activity from 5A1A during June by an Italian group is reported. Activity may included 6 meters.

IOTA NEWS.....
AS-043, HACHIJO ISLAND. JA2ZTR/1 will be aired May 17-19th. Operators will be JA2KVB, JH2ECU and JJ2AJE. Activity will be mostly CW. QSL via bureau or direct.

JD1, OGASAWARA. It has been reported that Mr.Yamamoto, JF1LGD/JD1, is active and looking for the DX station. He operates mainly on 15 meters at/or around 0800-1200z.

OJ0, MARKET REEF. Markus/DL1IAN, Ulli/DL3YEL, Peter/DL5IO and Stefan/DL6GV, will be active from Market Reef as OJ0/homecall from June 1-6th. Activity will be on 80-6 meter. QSLs will be automatically sent out via the bureau by DL5IO.

R1, FRANZ JOSEF LAND. Good News! Nick, R1FJV, will still continue to be active until the end of the year. His activity is mainly CW on 40-10 meters. QSL via UA3AGS.

V5, NAMIBIA. Laurence, GM4DMA, is planning to be active on all HF bands including 6 meters for one month beginning June 17th. He will be signing V5/GM4DMA.

VP2M, MONTSERRAT. Begin looking for Graham, G0VNW, from Montserrat as VP2MGG after May 7th. He will be using a G5RV or a vertical at first until a better antennas system arrives later. He operates mainly SSB but will try CW from time to time. QSL via WB2YQH.

COMING EVENTS

JUNE 14TH-15TH ANARTS WW RTTY DX CONTEST

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI2 or the Secretary (Pat) VK2JPA at VK2WI.

<5lcehk$vsl@mgate.arrl.org>...
>
> Amateur testing, although done now by VEs, is probably not any easier, or

> harder, than it was 20 years ago.

We disagree, but I'd rather concentrate on fixing the problem than debating its existence ...

> Taking the premise that the FCC is out
> of the business forever, other than expanding the size of the pools, how
> would you change the basic methodology? (I ask this question hoping to
> see some sound ideas discussed on this topic, not because I think there
> is no good answer!)

Assuming that it is necessary to substantially retain a "multiple guess" format in order to faciliate the grading of tests by VEs and to eliminate subjective opinion from that process, I would suggest that there needs to be:

1) much larger question pools, with equation variables, where applicable, randomized as each test is generated by computer ... the idea is to allow published examples of the substantive theory questions to be used as study guides, but not "memorize these answers and you can pass without understanding a damned thing" cheat sheets ... if one understands the underlying theory and formulae there is no reason to assert that one must have seen the *exact* same numbers before ... one with a true understanding will be able to derive the correct answers by using knowledge accumulated rather than wrote memorization ...

2) a restructuring of the license classes to two, perhaps three levels, with the lower, most basic, or "entry-level" class requiring at a minimum a level of knowledge consistent with safety for the operator and others. That someone who has passed the current no-code tech written can immediately go about building and operating a 1500 Watt PEP output VHF/UHF/uWave station with potentially megawatt EIRPs is outlandish.

3) making sure that material is updated for currency as new modes and techniques become available and technical advances in the commercial world present opportunites for adoption of new techniques in the ham bands.

I am sure that others will have many other good ideas ... but those above are what I think are the most important, basic "fixes" we need ASAP ...

> I think most hams, and the various VECs agree -- we could use more
> questions in the question pools. This needs to be balanced by a bit of
> reality -- most of the VECs are staffed by volunteers and developing lots

> of questions takes lots of time.

I don't see it as being *that* difficult ... questions could be solicited
and
accumulated easily via e-mail and other means, reviewed, and processed.
I would submit that the ARRL, for example, would provide a far greater
public service by paying a staffer to support this effort than by operating
"services" such as QSL bureaus, DXCC departments, etc.

> By my interpretation of Part 97, using
> "variables" for the Ohm's law questions would require some rules changes.

If you're right, then that's just another needed fix in Part 97 ... it's
not
carved in stone tablets and it's not sacred ... it has lots of flaws that
we
need to get fixed ...

> Getting more questions would require more work by people who are already
> devoting a large number of personal hours. (Even those VECs with paid
> staff must consider the costs of staff time.) I recall the last time the

> pools were about to be revised, the VECs and Question Pool Committee put
> out the call for folks to contribute input and questions; there were
> relatively few. Was your input among them?

I have to admit that I never received the inquiry ... when was this?
If it was between 1992-95 I was off sailing and not in touch with
"mainstream news" ... otherwise, I just missed it one way or the
other ...

If you'll let me know when more input is desired, I'll happily sign up to
generate at least 50 new questions ... (given reasonable notice)

Most modern digital modes incorporate in their protocols a "listen before
transmit" that precludes transmitting on an active channel ... now
admittedly

this is not perfect, but I believe that Gary and others who are active on HF digital will support the contention that it's FAR more common for a Morse op to either deliberately key down on top of a digital transmission (or do so without even realizing it's there) than the other way around ... indeed, many Morse ops deliberately TRY to disrupt digital QSOs simply because they resent the fact that they have to share "their" bands with the other, more capable modes ...

> fact changed.

That is absolutely correct, Bill ... entire bodies of knowledge have
been obsoleted and replaced by new, better, cheaper, faster, more
efficient, etc. technologies ... to argue that basic technological
knowledge required today is the same as even in the 1960s or
1970s or 1980s shows a pitiful lack of awareness of the tremendous
change and progress that the rest of the world has used to pass
ham radio by and leave it in the technological dust ...

If I had sat down to rest on my laurels with the knowledge I had earlier
in my career ... say in 1975 when I was first licensed as a ham ... I'd
be unable to find a job in the industry today ... probably not even as an
assembler, certainly not as a technician, let alone as a very senior level
engineer. I'd be outdated and obsolete beyond the belief of those who
have consiciously or unconsicously remained oblivious to the tremendous
changes taking place around them ... this group, unfortunately, includes
a significant majority of licensed hams ... with particular emphasis on
those who have been licensed as "higher class hams" for some time ...

I think several of us have proposed solutions that would decrease
the probabilty of memorizing the answers, in particular to posts
from Vince whining about reduced "standards". Clearly the simplest
and most effective would be to generate questions from a question
pool in parametric form, instead of exact questions and answers.
A computer would could be used to generate unique tests for each
testing session, but still have the content of the questions
available to the public. I believe this alone could eliminate
any possible rote memorization of answers and put that concern
to rest. It can also be done without any rule changes or action
on the part of the FCC. This is entirely in the hands of amateurs.

Mine wasn't because if there are truly 30 times the number
of exam questions in the question pool and they aren't simply
repeats of other questions with slightly varied numbers, then
we have a large enough question pool. We simply need to make
it appear to be a 10,000 question pool by means of computer
randomization.

In my mind (YMMV), $349 isn't "a little more cash" than the typical
$199 or so I've seen for the HTX-202 go for. Anyway, what is it about
the FT-50RD that makes it worth an additional $150?

As a one-time motor/transformer.coil rewinder for pay, let me ask you,
is the original lwire still on the solenoid you are to rewind?

If so, you might be well served to do what we used to if we had not
the original specs: We counted turns. Put it on a spindle with a
counter attached, and start pulling the wire off. Not too fast, since

if the wire is burned or breaks, you don't want the monentum to give
you a false reading.

The wire size and the turns count will give you an exact report.

However, if you take the outer diameter of the solenoid, the O.D. of
the spool, the size of the wire, and the thickness of the insulating
paper (if any), then you can use 8th-grade schol math to see the
number of turns.

That will put you well in the ball park.

Correct Resistance will follow as the day follows the day before.

I have a V-7 that I use primarily for CDF VIP service. I chose it because it is compact, has loud and good audio, has a pre-amp that is switchable (great feature!), has an easy to read dispalay (look at a 742 in the dark), and has a large microphone. I think Kenwood has a winner here.

> Larsen model is also worth considering.

Everybody has an opinion. For the money, Alinco has grat handhelds. I
have had two dj-580's in service for a couple of years and they appear
to be indestructible, plus the batteries rapid charge in the car. I
like the V-7 for a mobile...new, but good figures and features. Agreed
on both the Larsen and Diamond.

Remember, these are opinions..do your own research and buy based not
just on features, but also what works best for you, and most
importantly, receiver sensetivity and selectivety.

The charges would be based on the existence of local or state laws. There are no federal laws restricting the possession of a public service scanner in a vehicle.

From what I've seen of the "new" FCC, they're so downsized that it would take quite a bit of effort to get a response. Local police departments are probably more staffed and equipped to DF terrorist radio transmissions (witness the OJ cellular call) in a given city than the FCC is to DF radio complaints at the same location.

Hi Graham, I didn't say code testing is a form of "racial" discrimination
although it does remind me of racial/sexual/religious discrimination.

I said it is discriminatory and that's not such a stretch. "...to exclude
those unable or unwilling to learn the code, is *discriminatory*". From the
president and board of directors of Radio Amateurs of Canada, Inc.

Did you happen to have your forsight circumcised at birth?

I am sorry, Can't help adding to the age old argument with the same old *&$

but, if someone is too lazy or too stupid to learn something as simple as
code,
what possible contribution can the make in any field.
Your argument is the same as "Why learn to add and subtract? calculators
are less than 5 dollars, why learn to read, everyone has a TV" It always
amazes me that there are people willing to spend time and effort defending
why they shouldn't learn something.

Sorry everyone, don't want to start a flame war -- forget what I said- just
dinosaur talk.

P.S.

It is spelled "renaisance" yeah, yeah I know, why learn to spell when
spell checkers are the current technology?

It only covers your butt to the extent of what one considers to
be the scope of basic theory reuired for licensing purposes.
Towards that end, the scope has, does and will change over
time as you go on to note below.

>When I recently retired, I had decades of ever-changing electronics
>technology under my belt, from both working and keeping current as a
>Radio Amateur. What I worked on is none of your business,

I don't recall anyone asking.

>testing to debate - how dull for you).

Dancing in the aisles...hardly. I take no solace in knowing that
much of the change in the total mindset of the ham population
might relie on the demise of senior hams who (inspite of the fact that
they no longer use CW as you note above) cling to
their desire that all hams should be forced to learn CW for HF access.

>You surely WILL find some other aspect of the Amateur Radio Service to

>who like code will use it, testing or no testing, for years and years to
>come, and we have many, many very young enthusiasts. Oh, how that will
>grate on your nerves.

It is only a small number of people that have voiced such an attitude.
In my case, it bothers me not at all. I firmly belive in your
continued right to learn, use and enjoy CW. Why you think
otherwise is not supported by anything I've said.

>Sooner or later, when code testing is gone, the
>ongoing beeping will annoy you so badly that you will finally come right
>out and admit you want Morse code off the bands --- i.e. the truth will
>out.

Oh how tiring it gets to keep responding to these bogus
efforts to extend my (and other's) opposition to morse
testing to something far beyond (i.e. banning morse).

>Of course that is just my opinion of your deepest inner thinking,
>and not having mastered mind-reading, I could be wrong.

Indeed you are wrong.

I need to find 2 RD5108 chips used in the audio delay line for a RC-85 controller.

The semiconductor manufacturer, EG&G Reticon no longer makes the part.

Link Communications, who acquired parts and pieces of ACC did not have the part.

Please email responses to me at rliles@harris.com
Thanks,

Ray

Don't use a radio for this. Eighter visit the police station, write a letter,
or use the phone (do NOT use 911 for this, use a seven digit non-emergency
phone number) to tell them you appreciate their efforts. They'll be happy
to hear this, they don't get too many civilians giving appreciation to them.

Do you mean the posession of a scanner or a radio capable of transmitting on police-bands is not prohibited? There are states (Kentucky, Michigan, a few others) that have laws prohibiting the use of mobile scanners in vehicles unless the person who owns the vehcile is an amateur radio operator or has a written permit from the state to have a scanner in the vehicle. As far as I know, there are know laws against owning and operating a scanner inside a house or building.

Owning a radio which is capable of transmitting on police bands is questionable. I don't think there's a law against posessing one, only laws against transmitting on police bands unless you're authorized to transmit on them by the department or it is a extreme emergency.

Happy scanning!

I've had mine for about 1 month.

I love it. I also have a Kenwood 742. I like the V7A better with one exception. I wish it had a mute feature for the subband. Other than that it's great.

I use many more of the features on the V7A, because they are easy to invoke, than I do on my other rigs.

You will like it.

> spell checkers are the current technology?

Actually ... I don't exactly have a spelling problem ... it's more that I
have
a problem with fine motor coordination and sensation in my hands and
fingers as a result of a spinal chord injury ...

Note, I'm not claiming to be the national spelling bee champ or anything,
just pointing out that sometimes my fingers trip all over themselves and
don't do exactly what I told them to do (sometimes they hit the right keys,
but in the wrong order, sometimes they miss a key or two, and sometimes
they hit adjacent keys)

Prior to the injury, I could type a solid 60wpm ... now I can hardly do
35-40
and that's seldom 100% error free ... I have to either slow *way* down or
use
a spell-checker to find the blunders ...

I am loath to invest a lot of extra time in chit-chat here, so I haven't
been
inclined to slow down to a snail's pace, and my newsreader doesn't
have a spell-checker ... so I guess you'll have to learn to live with my
imprefections as I have ...

73,
Carl - wa6vse
wa6vse@fast.net

p.s. If you doubt the veracity of my "excuse", I'd be quite happy to send
you a GIF or JPEG of the MRI from the neurosurgeon's letter to my primary
physician, clearly showing the spinal chord compression at C5-6 ...

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

The anticipated arrival of the coronal mass ejection related to the weak solar proton flare of 12 May arrived around 02:00 UTC. It produced a measureable sudden impulse at numerous magnetic observatories.

Levels of geomagnetic and auroral activity are intensifying as of 06:30 UTC on 15 May. A middle latitude auroral activity warning has been issued for the next 12 to 18 hours. Activity is currently not particularly strong, but is expected to increase to moderate levels of activity and become more visible over fairly widespread middle latitude dark-sky sites over the next 12 to 18 hours.

HF radio propagation conditions are becoming increasingly degraded over high latitude paths. Equatorward migration of the auroral ovals will begin to affect upper-middle latitude paths shortly. Most MUFs have been enhanced by between 20 and 40 percent between 22:00 UTC on 14 May and 04:00 UTC on 15 May. Depressions as high as 30 percent below normal are expected to begin dominating over the next several hours.

No serious improvements in propagation are expected until 16 May.

For realtime access to ionospheric and geomagnetic data (and much more) on your home computer, refer to the URL: http://solar.uleth.ca/solar/www/swarm.html. Monitor conditions yourself, at home.

Your assertion that there is no discrimination WRT code and that
my assertion that there is is "asinine" is akin to a white plantation
owner of old asserting that his slaves "are quite content with their
lot in life, are treated well, and wouldn't know what to do or how to
take care of themselves were it not for his (their master's) magnificent
generosity and benevolence in seeing that they were cared for, fed,
and had the means to earn their keep."

> testing to debate - how dull for you).

No, I take no solace in the increasing disability or disinterest in CW among your old-timer friends. You attribute the change in their operating practices to increasing age, and I will not argue that as you know them and I do not. However, I also see a decline in CW usage among many of the "older hams" (I am not yet 50) -- and it is due to the physical changes often occurring with increasing age.

For some, hearing will go down a bit -- I believe this will occur in the higher voice frequency ranges first, so CW tone, nor SSB, should be affected at first. For others, though, a generalized loss of hearing might make copy more difficult, and from what my friends with hearing aids tell me, those tiny devices amplify most of the noise, too.

For others, arthritis may set in (I already have the first twinges), making keying more difficult.

Others simply find their ability to concentrate on trivia lessened.

I, for one, would not want to take away their right to use CW. But it is clear that for these friends of yours, and for some of my friends in the community, CW is no longer the mode of choice.

You slap at the no-code-testing crowd as if we oppose CW itself. This is simply not true. Our opposition is to keeping CW as a pass-fail test for HF privileges. Recently I have been seeing calls for retesting of hams. The argument is that if CW is so important that must be required for upgrades and access to more of the HF spectrum, then those who insist on this importance should also require those who have the privileges now should continue to prove thier "right" to that piece of the radio spectrum. This is, to my thinking, similar to requiring a driving test to renew your drivers license to make certain that you are not a hazard on the road. However if it so important that newcomers to the hobby learn and demonstrate 13wpm to acquire even voice privileges on lower frequencies, perhaps we should require continued CW proficiency testing for "old timers".

"Our" position is that such CW testing is NOT necessary: not for them, and not for anyone else. CW is itself a filter, and we don't need a test to make it work. Those who cannot do CW cannot use CW, and the CW enthusiasts will be none the worse for allowing people with demonstrated technical ability to chat on HF. While we are still required by treaty to test for CW knowledge, the higher speed levels for the higher class licenses are not mandated -- they are simply opinion, given the weight of regulation. We can change the regulations without neglecting our treaty obligations (which may or may not change).

> You surely WILL find some other aspect of the Amateur Radio Service to
> attack, however. I am confident of it.

In any group with similar interests, there will ALWAYS be some things that not everyone can agree on. If CW were outlawed as an operating mode (not holding my breath), people would find other things they want to see corrected. Ham radio is not perfect, and the complaints about the various HF "sewer" frequencies prove that perfectly.

> Sooner or later, when code testing is gone, the
> ongoing beeping will annoy you so badly that you will finally come right
> out and admit you want Morse code off the bands --- i.e. the truth will
> out. Of course that is just my opinion of your deepest inner thinking,
> and not having mastered mind-reading, I could be wrong.

What ever makes you THINK this? There are probably some who do want to do away with Morse. Most people I know simply want the pass-fail testing eliminated. It is MY opinion that you are letting your emotions get the better of you here, instead of keeping a rational and reasoning mindset and arguing logically and from fact.

Actually, I am hearing a lot more emotional noise than there should be in this discussion. A person that can find a failed part in a radio circuit using logic and training and skill SHOULD also be able to find a way to that same logic to argue a disputed point such as continued CW testing. Name-calling, emotional shouting, and the like, remind me of the politician's notes after a speech. In the margin he had penned, "Weak logic, shout!" While I see some of this on both sides of OUR issue, I am still waiting for a rational and logical argument for retaining the CW testing requirements. I am beginning to fear that there are NO GOOD reasons, only loud emotional arguments.

Keep using your CW. Keep promoting it. If you can find a good, sound, argument (as opposed to one that merely sounds good to you) for keeping the testing, go ahead a push for the status quo. But until you can convince me purely by fact, reason, and truth that the CW testing should remain as it stands today, do not expect me to stop the fight for what I see as a better way. No, I have NOT given you clear, factual, and reasonable arguments for change -- that was not my intent here -- but I can. And so the figh goes on . . .

73, Fred!

>
> What NONE of you people have explained is why we have to drop the code
test
> to adopt "new technology and modernize".

The two subjects are interrelated in a way that I strongly suspect is
beyond
the intellectual capacity of those of you with such deep Pavlovian
conditioning
to absorb and comprehend ... however, they ARE interrelated.

> I don't understand why you think
> that can't be done with the code test in place.

First and foremost, the whole "beeping is the best and highest method
of communicating by radio" myth has to be soundly destroyed, since
it's patently false and generates a LOT of bad attitudes towards hams
(from the public), amongst hams (the way beepers look down on non-
beepers, and the resulting resentment), and in many other ways.

> You can't purchase and use
> the latest and most advanced equipment because you have to take a code
> test?

Again ... try to find somewhere to at least rent or borrow a clue ... you
can't
just "go out and purchase and use the latest and most advanced equipment"
period ... you have to design and build it ... at the pace at which
technology
is moving, by the time even the newest commerial product *is* a commercial
product, it's virtually outdated ... this is why we need more folks who
have a
clue about technology and fewer beepers, yackers, and gamers (whose
[incorrect] idea of the "purpose of ham radio" is to support whichever
of the previously enumerated activities they prefer, regardless of how
inane)

> How does the code test stop this? Thats what I don't understand.

By keeping out the technically-inclined folks who could design and build (and teach others to at least build and use) the advanced equipment and modes that we need for the future ...

> I don't have on blinders and I'm very open minded.

Sorry ... I see NO evidence of the veracity of these claims ... if not blinders, perhaps welder's goggles at the bottom of a deep well at midnight???

> Explain it to me. How does the code test requirement prevent me or anyone
> from using the latest forms of communication technology if we choose to do
> so? This is an real question and I would like an real answer. Not just
> another worthless comment. Thanks in advance.

OK, I'll take this slow and easy for ya ...

First, you can't use what doesn't exist.

2nd, to develop what doesn't exist you need people who know HOW to develop what doesn't exist (and even to recognize what's needed).

3rd, the people refered to in (2) are kept out of ham radio in large numbers by the antiquated, distasteful, Morse hazing ritual that many coded hams insist must be maintained at all costs ...

4th, this policy of technological stagnation has already harmed ham radio seriously and, in fact, threatens our future survival as a viable FCC radio service in the coming century because it has resulted in our service NOT MEETING the vast majority of its' regulatory raisons d'etre. (if we don't "get a move on" the FCC will likely decide that we're not worth the spectral investment they've made, take our bands back, and auction them off to someone who will make FAR better public interest use of them.)

This concludes the *real* answer ... at least the short-form version of it ..
you're welcome.

I sincerely hope that you will consider these comments in a thoughtful manner, perferably in the light of reality, outside of the well, at high noon, and without the welder's goggles ...

OH YES THEY ARE LAWS THAT MAKES IT ILLEGAL TO HAVE A SCANNER THAT CAN
BE INSTALLED IN A VEHICLE OR HAND HELD THE STAT OF IND HAS SUCH LAWS
THEY ARE EXEMPTIONS SUCH AS BEING A HAM RADIO OPERATER A PERSON THAT
SELLS OR REPAIRS OR A WRITTEN LETTER FROM THE CHIEF OF POLICE I KNOW I
WAS ARRESTED IN 1992 AND ALSO IN 1993 HAD STATE ISSUED HAM PLATES ON MY

CAR AND A COPY OF MY LIC BUT MY CAR WAS TOWED MY EQUIPMENT WAS DAMAGED AND AFTER THOUSANDS OF DOLLARS IN LAWYER FEES AND MED BILLS THE CASE WAS WENT TO COURT AND I WAS FOUND NOT GUILTY TWO CIVIL CASES PENDING SO DONT EVER THINK YOU CANNOT GET ARRESTED FOR HAVING A SCANNER.THEY WAY THE LAW IS WRITTEN IN IND IF YOUR MOTHER,DAUGHTER ,WIFE, ETC WALKED INTO THE LOCAL RADIO SHACK AND BOUGHT YOU A HANHELD OR MOBIBLE SCANNER AS SOON AS THE WALK OUT THAT DOOR THAT IS NO LONGER A SCANNER IT BECOMES A POROTABLE POLICE RADIO UNDER IND LAW AND THEY CAN BE ARRESTED WHILE ON THE WAY HOME WITH YOUR NICE BIRTHDAY PRESENT.I AM ALL FOR THAT ANY ONE WHO USES A SCANNER OR COMMUNICATIONS EQUIPMENT IN THE COMMISSION OF ANY CRIME SHOULD BE ARRESTED GOOD LUCK AND HAPPY MONITORING FROM DON KA9QJG

John,

My experience with the CDR rotators is limited to an old TR-44 that I recently pulled out of the junk box put back in service, but slow movement was the result of the phase shift capacitor in the control unit. I had replaced it once before about 20 years ago and it stayed in the attic for that long before I used it a gain and I had to replace it again.

ABOVE NORMAL H.F. RADIO PROPAGATION REPORT

Issued 15 May 1997

Valid: UTC day of 14 May 1997

(A Special Report)

The following report is an ABOVE-NORMAL Radio Propagation Report for F2-layer maximum usable frequencies. It is based on a few selected stations measuring critical F2-layer frequency data, ionospheric M-factor data, and maximum usable frequency values observed during the last 30 days. It shows peak enhancements ABOVE normal 30-day values (NOT peak MUF values, but the times where the MUF values are above normal the most), and the observed MUF for that time-period (if available). It is valid for 3,000 kilometer (1,875 mile) path distances.

The data presented below is not fabricated from ionospheric models. They are TRUE MEASURED quantities determined from ionosondes and are therefore highly accurate. Notice the strong enhancements that occurred today, 14 May 1997 (normal hourly enhancements can range from 10 to 20 percent).

Several regions such as Texas, Alaska, Eastern Canada and California could have experienced unusually good propagation on HF bands up to the indicated MUF, at the times indicated.

Signal paths with midpoints near California may have experienced brief 10-meter openings at 22:00 UTC for distances up to 3,000 kilometers - a SUBSTANTIAL and unusual enhancement that could have been realized had communicators known of these conditions at 22:00 UTC.

This report was gathered from data and plots provided by the Solar Warning And Realtime Monitor (SWARM) Software, which can turn home computers into advanced ionospheric and space weather monitoring stations. Persons interested in this software should consult the URL: http://solar.uleth.ca/solar/www/swarm.html

STATION	UTC HOUR OF PEAK DEVIATION FROM NORMAL	F2-LAYER MUF	NORMAL MUF	%
Bermuda	22:00 UTC	23.8 MHz	19.8 MHz	+20%
Dyess AFB, Texas	03:00 UTC	23.3 MHz	15.1 MHz	+54%
Eielson AFB, Alaska	09:00 UTC	14.0 MHz	9.7 MHz	+44%
Goose Bay, Canada	02:00 UTC	15.1 MHz	10.0 MHz	+50%
Leamonth, Australia	15:00 UTC	11.9 MHz	9.9 MHz	+20%

Vandenberg, Calif. 22:00 UTC 28.7 MHz 19.3 MHz +49%
Wallops Island, VA 03:00 UTC 17.1 MHz 12.2 MHz +40%
Eglin AFB, Florida 14:00 UTC 16.5 MHz 21.8 MHz +30%
Hobart, Australia 13:00 UTC 11.6 MHz 8.9 MHz +30%
Camden, Australia 15:00 UTC 16.9 MHz 12.4 MHz +36%

The peak MUF measured during the UTC day for the stations selected above are indicated below. These are peak MUF values, not MUF values where the MUF deviated the most from normal levels. The MUF never exceeded the values indicated below.

STATION	UTC HOUR OF PEAK MUF	F2-LAYER MUF	NORMAL MUF
Bermuda	22:00 UTC	23.8 MHz	19.8 MHz
Dyess AFB, Texas	21:00 UTC	24.8 MHz	18.4 MHz
Eielson AFB, Alaska	00:00 UTC	16.0 MHz	14.3 MHz
Goose Bay, Canada	22:00 UTC	19.5 MHz	15.6 MHz
Leamonth, Australia	05:00 UTC	24.0 MHz	22.1 MHz
Vandenberg, Calif.	22:00 UTC	28.7 MHz	19.3 MHz
Wallops Island, VA	23:00 UTC	21.9 MHz	17.5 MHz
Eglin AFB, Florida	23:00 UTC	25.8 MHz	20.3 MHz
Hobart, Australia	05:00 UTC	21.5 MHz	20.9 MHz
Camden, Australia	02:00 UTC	21.3 MHz	21.3 MHz

** End of Report **

> license for people under 18 who wish to take a watered-down version
> of the tests.) This "Standard"/"Junior" license gives a wide range of
> privs with limited power.

Were MD not simply parroting what Steve and I and others have been
advocating for a LONG time, I'd be scared by having to say that I agree
with MD's statement substantially (with the following modifications) ...

I agree fully that 2 classes of license should be quite adequate ...
the baroque, convoluted class heirarchy that the ARRL constructed
with it's "Incentive (to pass faster and faster Morse tests) Licensing"
debacle is unnecessary and harmful.

I agree that there should be an "entry level" license, but see no a shred
of justification for limiting it to those who are under the age of 18 ..
why
should not an 80 of 90 year old who becomes interested have an equal,
entry-level path into ham radio????

I also agree with the concept of giving the "entry-level" class a wide
range
of privs (I vote for full band/mode privs) with a power limit in the
interests
of safety and reduced potential for interference since this license class
will have demonstrated less complete technical knowledge than the more
advanced class (whose name is yet to be determined ... maybe we just
call them "entry-level" and "standard" in the interests of minimzing
ego-based
class distinctions such as now exist so rampantly ...

One more thing WRT the "entry-level" class ... the level of technical skill
shown needs to be a fair amount higher than the current no-code tech ...
at least at the level of the current full general class, I sould say ...
and
the power limit should be somewhere in the 50-250 Watt range ... maybe
lower power on the higher bands, where tissue heating and other RF

exposure factors are more of a concern ...

The "standard" class would combine current advanced and extra theory.
The extra privs granted would be "full power" operation ... though advanced
technology will rapidly reduce the need to ue high power in most cases.
They would also have the priv of being VEs and whatever other perks seem
appropriate ...

Both classes would have a 5 wpm Morse test as an endorsement for HF
access for the time being, with that test being dropped automatically
if/when
the ITU treaty is modified to remove language requiring any form of Morse
proficiency testing ... NO *ban* on Morse would be enacted *or* proposed.

(I personally would support language in the rules, or even a law (by act of
Congresss) codifying a preclusion of any outright ban on the use of Morse
in the ham bands for at least 50 years ... forever is too long a time to
forsee
... but 50 years should surpass the lifespan of most current, coded hams,
thereby satisying any selfish concerns they may have ...)

> Then, to operate a particular mode, you take a practical "operational"
> examination on that mode. You want SSB HF, you take a test. RTTY, take
> a test. And so on. Once you pass the test for that mode, you gain an
> endorsement for that mode, and are authorized for all freqs/power
> associated with that mode.
>
> This is called "mode-based" testing. Every test you take you immediately
> gain additional operating privileges. It is not complicated (other than
> the fact there are "more" tests,

It *is* more complicated ... FAR more complicated ... to keep track of all
of those ridiculous endorsements ... it is far simpler to construct a
single
technical test that is sufficiently broad in scope to cover the *necessary*
aspects of the different modes and basic theory, without creating another
complicated, baroque system of "brag-rag wallpaper."

> but more tests with less license classes
> helps to ensure technical competence, something Carl and the anti-code
> crowd claim they want.)

Less licence classes in the only sensible thing I've *ever* seen MD say
or support ... but more tests? The VEs will pitch a bitch, the FCC will
never want the additional record-keeping complication, and it presents
a very complicated enforcement situation as well.

KISS ... that's a basic advanced engineering principle ... eliminate
unnecessary complication that produces no significant benefit ...
a single, well-conceived test can assure the goal of technical competence.

MD's "mode-based testing" is more like MICFCS (that's Make It
Complicated For Complication's Sake) ...

OK, Carl, Cecil and Bill --- superbrains of both this and the next millenium.....

I clearly stated:

"Well, yes, Cecil, TECHNOLOGY does change, but basic theory does NOT (barring new contradictory findings by engineers and scientists),"

and that is true, not false (the basic theories underlying transistors etc. were set forth before I became a ham in 1948, and the transistor was invented when I entered college, and practical circuits began showing up when I entered the electronics industry.) Those were new findings, such as occur nearly every day, but no, you needed to write, and took off from a sentence that included, I repeat, a phrase that covered my butt quite well, else I would not have written it.

When I recently retired, I had decades of ever-changing electronics technology under my belt, from both working and keeping current as a Radio Amateur. What I worked on is none of your business, athough virtually all of it is functioning very well in US radar and sonar and battle-control computers located worldwide. To assume that others of us "old fartz" who enjoy both QRQ and QRS OOK Morse have the same knowledge base, even of the basics, is of course ridiculous. In any event, generalizations are dangerous. So is hurriedly taking material out of context and thus bringing me out of the ashes long enough to swat you in public.

You might take solace in the fact that amost none of my old-timer friends ever use Morse code anymore (but I take no solace in it --- they used to enjoy it and use it, but are growing old, which must make you feel like dancing in the aisles, for they shall be gone, and you can then talk into mics and pound keyboards until Hell freezes over - and have no Morse testing to debate - how dull for you).

You surely WILL find some other aspect of the Amateur Radio Service to attack, however. I am confident of it. You could be sitting on here calling us FISTS members "Luddites" or worse, or you COULD be on the air. Methinks you all spend more time on the Internet, but I cannot, of course, prove it. Hopefully you spend some time working, since I have checked and none of you are likely to be retired.

BTW, the FISTS CW Club continues to grow - now about 1/3 the size of the old QCWA, which has grown stagnant as more members quit than join. We who like code will use it, testing or no testing, for years and years to come, and we have many, many very young enthusiasts. Oh, how that will grate on your nerves. Sooner or later, when code testing is gone, the ongoing beeping will annoy you so badly that you will finally come right out and admit you want Morse code off the bands --- i.e. the truth will out. Of course that is just my opinion of your deepest inner thinking, and not having mastered mind-reading, I could be wrong.

The latest gripe is the militaristic nature of the club name, FISTS. Is there no end to such trivial pursuits? The answer is no. Well - back to the family, the pets, the newspaper, and the ham set...

Fred - NY2V

RedHat is pathetically easy to set up; however, I would not advocate
dumping a perfectly good Slackware distribution to run the RedHat.
Slackware's rc files, bootup scripts, and config files are much better
kept than RedHat's, which, in my opinion, are needlessly scattered
into too many subdirectories.

As I sit here this morning listening to nearly totally dead bands (even the transequatorial path to Radio Australia is producing < 5dbS/N), I must comment how GREAT Tuesday and Wednesday were. I have not heard propagation conditions that good since the cycle, and it was really refreshing. After several years of weak propagation, you almost forget how much fun this hobby can be when a good opening occurs.

I have heard through my local Ham Equipment supplier that Yaesu will be
showing a new mobile at Dayton, the FT-8100r. Does anyone have or know
any info on this? I'm in the market right now for a mobile and I'm torn
between the Yaesu 8500 , 8000r, and the Kenwood Tm-v7a. If the new 8100r
has alpha memory saving ability I'll probably get it, if it exists. Any
help or info would be appreciated. I'd hate to buy something now and a
better model be released the next week. Thanks.

CW is the language spoken by hams all over the world and those who restrict their ham activities to the voice portion of the bands are missing part of the ham radio experience. Many CW contacts world wide are between hams who cannot communicate in the voice because of language barriers.

In some respects it is the written portions of the current exams that are more obsolete than the code requirement.

If you really want to get the cry babies made lets put in the requirement for US. operators only to learn and become proficient in american morse as well as the international morse code for the higher classes of liscenses.

The advanced class morse code requirement should be raised to 20 wpm and the extra to 40 wpm. The code heard on the extra class portions of the band is just awful and raising the requirements would help.

:>I'm running a PSK system on HF now which operates at a *maximum* power
:>of 10 mW on links between here and Indy and here and Denver. The data rate
:>is adaptive. At 10 bps (faster than a typical Morse contact), it works when the
:>signal can't even be heard by ear. And I can slow it even more when the band is
:>particularly sour. At 1/10th baud, it is 10 db better than at 10 bps, at 1/100th

Gary,

I realize this is really off-topic, but could you possibly e-mail me with the sort of equipment you're using for this system? I'm VERY curious to know any details you can provide. I especially like the low power aspect. I get enough grief from neighbors with my packet station and 100 watts.

It sounds like this could be the answer to my prayers for the semi-lousy 10m propagation I have to deal with being a "lowly" Tech+. :-)

Hi Graham, real answer. I work with a guy who designs the latest forms
of
communication technology and he is prevented from putting them on the
air
on the HF ham bands by the code test requirement and some other silly
rules.

The charges would be based on the existence of local or state laws.
There are no federal laws restricting the possession of a public service

scanner in a vehicle.

There are certainly local and state laws regulating the possesion and
use of scanners. These laws often infringe on amateur radio operators
because the amateur radio transceivers (which are perfectly
legit to own and use) have extended frequency range which covers
the public service band (which is the "illegal" part under state
and local laws). The way each jurisdiction handles this exception
is done on a case-by-case basis, so there's no blanket statement
that can be made based on federal laws and FCC regulations in
the areas where the federal laws and FCC regs are silent.

What I would like to suggest is to break off this thread into another
seperate thread, and persons from each state or local jurisdiction
note what the scanner laws permit or prohibit relative to the
possession and use of scanners and radios capable of
picking up the public service band. Let the original thread die.

You can now download a FREE US Callbook for your PC last updated on
February 24, 1997. The callbook is compressed to 18 megabytes for
downloading and uncompresses on your hard disk to about 44 megabytes.
It contains ALL US calls, names, and addresses as of the above date.

You can enter the callsign and the name and address of the owner is
returned. It is a basic, stripped down callbook for installing on
a hard disk. The information for the callbook was obtained directly
from the FCC's own FTP site, but was stripped, formatted, and sorted
for use with the callbook programs that reads the calls, written by
Darvell Hunt, N7LN. It is a simple DOS program and should work fine
in DOS, Windows 3.x, Windows 95, Windows NT and probably all other
PC operating systems.

Try it out! And let me know what you think of it!

You can find it at --> http://www.qsl.net/n7ln/callbook.html

Thanks & 73's,
Darvell (N7LN)

(PS: The callbook also comes free, with more features, on my QSL Clipart
CD, and runs fine FROM the CD. But it runs faster on your hard disk.)

Well, there is one major difference. The charter of amateur radio calls for advancing the state of the art. It would be difficult to advance the state of the art if one did not even know the basics of radio construction and design now, wouldn't it?

Nobody I know who is against mandatory code testing thinks that the theory test needs to be done away with, this is yet another red herring tossed out by people who use inflammatory remarks like "welfare ham licenses". Many think the theory exams should be harder.

I have the following Bendix King HT package for sale...

Bendix King Model LPU 4991 A UHF HT, 210 channels, 15 banks, in
EXCELLENT condition.

Radio has been downbanded to include the 440 amateur band, through 510
Mhz......

Includes drop in, desktop rapid charger, (3) Three ten volt batteries
LAA0125, (1) brand new 10 volt battery, short version, LAA 0121, 4
week old Alpha display keypad, user programmable in field, scans ,
Belt clip, keypad covers, manual...

$500.00 shipped to 48 pre-paid....COD terms negotiable via FEDEX...

> To me, it seems to be a similar problem as using adaptive optics on
> large optical telescopes to compensate for the instability of the
> atmosphere.

The technique that I mentioned earlier (that I invented) in fact "uses
a pilot" ... but that pilot is, in fact, the actual carrier, and therefore
permits fully coherent detection at the receiver, after doing a
"feedforward signal regeneration" (regeneration in the sense of
"restoring to it's original, uncorrupted form" not in the sense of
"nearly oscillating" as in "regenerative receiver") to remove the
channel impairments induced by the multipath channel ...

One additional, interesting feature of this this architecture is that,
even_for_a_SINGLE_SIDEBAND_signal the true carrier is at the
center of the channel, with the SINGLE sideband symetrically
superimposed about it ... and the undesired, opposite sideband
occupies exactly the SAME spectrum ... there are numerous
systematic benefits to this signal structure ... one of which is that
any imperfection in the supression of the undesired sideband is
only perceived as a very slight increase in the apparent level of
distortion in "my" channel, not as splatter into ("your") adjacent
channel ... considering near/far effects, this is can be significant
in crowded bands.

This technique permits the correction of both the amplitude and
the phase distortions introduced by the multipath channel and
when applied to digital signalling waveforms will permit the use
of much "denser" signal constellations such as 16QAM or 64QAM
in a UHF mobile multipath environment ...

Your mention of "a pilot" prompted me to mention this again, in
case you hadn't seem my earlier comment regarding my technique.

Not in Germany: according to our band plan, 7.000 - 7.040 MHz is
reserved for CW, SSB is allowed at 7.040 - 7.100 MHz. There are
no contest-free segments.

>I would like to read some well written and thought
>out support for your views and edicts. Hell, you may even sell me if
>you can conjur up a good showing.

Hi Bob,

Well, Carl is not the only one posting here. There are many others, and over the course of the last few years, they have written a tremendous amount pertaining to exactly what you describe. I suspect that you dislike the conclusions drawn from the logic that has been presented thus far, and so you simply discard the logic.

But it may instead be the fact that you dislike the individuals who are writing here on the internet, so let me direct you to the recent editorial columns of any of the major ham radio publications, such as QST, CQ, and 73. You will find examples there of some of the same ideas which have been introduced here on r.r.a.p.

Perhaps that is still insufficient for you. Let me then direct you to the RAC, who has now also recognized the reality of what we have been saying here. Or to the FCC, who has for years expressed the view that code testing is unnecessary in the amateur service. Or to the IARU, who has quite explicitly requested compelling reasons to continue the Morse requirement. And rest assured that similar discussions have been conducted at the Board level of the ARRL, and within and among the VECs. Too much vestigial dogma persists within the latter organizations for them to recommend any significant changes to the system however.

That fact is, the incentive program, with it's dependence upon Morse testing, is now producing an affect precisely the opposite of what was originally intended. It offers instead a dis-incentive to upgrade. It sends a message to operators in the Technician class (and to those outside the service) that 'we don't care what technical knowlege you may have or can demonstrate via the written exams - it is insufficient.' Furthermore, one can only assume from our current system that it does not matter whether an operator is capable of properly and responsibly operating amateur equipment below 30 MHz on any other mode unless and until he can manually decode one particular signaling system that is neither manditory nor even commonly used in activities related directly to the fulfillment of our charter goals.

The bottom line is, you might as well not waste your time with technical acumen, because it will not be rewarded with additional privileges for having practiced that particular form of self-improvement in and of

itself. I don't agree with this attitude. But the effect the code requirement now has is inconsistant with the goals of the service.

The service cuts off it's nose to spite it's face, in the interest of providing the world with something it neither asks for nor needs - a trained pool of radio telegraphers.

We could continue to try to convince the rest of the world they are wrong, or instead try to tailor the amateur service in order to direct our energies toward once again advancing the state of the communications art. We can do this by eliminating senseless detours and roadblocks from the system, and by establishing a realistic set of modern day radio communications operating and technical criterion on which to base our operator qualifications. It should be born in mind that we are the only remaining service to require technical examinations in order to operate a transmitter. This should be taken as an encouragment to those who concern themselves with the matter of amateur radio turning into a different service as a result of little more than an administrative change.

Morse code used to be the simplest way to get on the air - and it was at one time relevant to modern communications. I would not agree that CW has entirely outlived it's usefulness in amateur radio, but the amount of energy expended to learn code is much better spent on other more progressive aspects of radio operating and theory - aspects that will indeed provide a more suitable foundation from which to advance the art. Those aspects are indeed worth encouraging - via incentive. Yes, the incentive is additional privileges. But code essentially counter acts the incentive - no net incentive.

I believe there are more significant and relavent meaures of operator competance than Morse speed, all of which can be determined by written examination. In compiling such a list objectively, one would certainly have to put code at or near the bottom. The amateur service instead devotes 35% of it's exams to it exclusively. This is radically disproportionate. If we could at least agree in principle, we could begin to work toward reaching our truly common goal.

Message-ID: <337B6B14.2890@miavx1.muohio.edu>
Source record: 198302

Copy of messasge to Dayton Hamvention Organizers, protesting their new policy of forbidding flea market sellers from moving their vehicles during the hours the flea market is open. In other words, if your vehicle isn't in its designated spot by 7AM on Saturday, you won't be allowed to enter the fleamarket at all. Once in the flea market, you can't leave until 6pm (4pm Sunday).

****
Dear OMs,

I think the new flea market driving restrictions are the most stupid and ill-considered thing the Hamvention has done in years. If the Fire Marshall and Trotwood Police are really behind this change, then the Hamvention organizers need to register a very strong protest. The rationale that the safety of the participants requires the change is ridiculous. If this rule is really enforced this year, I think you'll discover that future interest in buying flea market space will greatly diminish. Commercial vendors may continue to show up, but individual sellers won't
put up with this restriction. Do you really expect people to tolerate having their vehicles locked up until 4pm on Sunday?? Dream on! I've been participating in the flea market for many years, but if the rule stays the same, it's the last time for me.

73,

Jim Garland W8ZR

You're kidding, right? Yeah, you *must* be! No one would state that in all seriousness.

> Your argument is the same as "Why learn to add and subtract? calculators
> are less than 5 dollars, why learn to read, everyone has a TV"

It can be argued that knowing how to add and subtract, and read, is somewhat of a necessity in order to be able to live in today's society. Knowing CW certainly isn't. Neither does knowing the code make one a "good amateur radio operator" -- listen in to the crap on 75m phone once in a while for evidence of this, only "know coders" there! CW is but *one* mode of operation, and one mode whose use is declining the world over because better modes are taking over. It makes no sense whatsoever to judge an applicant's ability to contribute to the Amateur Service, via their technological know-how, or other people-oriented service, based soley on his/her ability to use one particular (outdated) mode!

>
> K4XA
> Graham

The only problem that I have with *any* enforcement measure is that, with
the FCC "out of the enforcement" business, who's going to play "radio cop"
and how do we assure that "justice" is metered out in a fair and
even-handed
manner ... I sure as hell don't trust the ARRL enough ... and I certainly
would
never vote in favor of giving them that sort of "power" ... they've done
far too
much damage to the ARS already without power ...

Regardless of code/no-code, technical issues, or anything else, one thing
that the ham community also needs to come to grips with is developing
some sort of way to actually see that the rules are enforced and that the
sociopaths that do slip through the licensing process are eliminated ...

[snip]

I guess, by your terms I am a "beeper" because I sometimes
use Morse. I also sometimes use clover -- guess that makes me
a ruminent? When my repeater uses FM, does that make me
a deviant? When I send RY in baudot, am I a diddler? (How dare
you diddle my sisters frequency, you cad!)

Who do ruminents and deviants and diddlers "look down on"?

Perhaps I don't look down on anyone. Is that allowed?

Fortunately, the "look down on" phenomena seems to be restricted
to UseNet. I have not observed it in the RW (Real World). In fact,
I have never ever heard those disparaging terms outside of UseNet.

SB QST @ ARL $ARLB024
ARLB024 Saturday is World Telecommunication Day

ZCZC AG24
QST de W1AW
ARRL Bulletin 24 ARLB024
From ARRL Headquarters
Newington CT May 15, 1997
To all radio amateurs

SB QST ARL ARLB024
ARLB024 Saturday is World Telecommunication Day

Telecommunication and Humanitarian Assistance is the theme of this year's World Telecommunication Day, scheduled for this Saturday, May 17. World Telecommunication Day takes place each year on the anniversary of the creation of the International Telecommunication Union, May 17, 1865. A specialized agency of the United Nations, the ITU has the vital role of overseeing the division of the range of radio spectrum for the entire world.

Amateur Radio will be featured in a special center to be located in front of the ITU Headquarters building, at the Place des Nations, in Geneva, Switzerland. Special event station operators will use the call sign 4U1ITU of the International Amateur Radio Club. The station is operated in accordance with privileges granted by Switzerland and the ITU.

The League has arranged a schedule with the Geneva special event station to convey commemorative messages from ARRL and IARU. IARU is a Sector Member of the ITU. ARRL is the International Secretariat of the IARU. U.S. individuals and groups involved in emergency communication programs such as ARES and RACES are also invited to contact and exchange messages with the station. 4U1ITU operations are expected on twenty meters from 0700z to 1900z on May 17, and from 0800z to 1500z on May 18 through May 22. QSL via the bureau or IARC, P.O. Box 6, CH-1 211 Geneva 20, Switzerland.

W1AW operators will transmit the following message to 4U1ITU on May 17:

''On the occasion of 1997 World Telecommunication Day, the American Radio Relay League is pleased to convey this commemorative message on behalf of United States radio amateurs. This year's theme of Telecommunications and Humanitarian Assistance lies at the very

heart of Amateur Radio. In recent weeks, for example, radio amateurs in the northern plains of the United States selflessly provided radio communication assistance, working shoulder-to-shoulder with relief agencies and the citizenry of settlements ravaged by catastrophic flooding. The ARRL hereby sends its greetings and best wishes to the International Telecommunication Union on the anniversary of its creation, and looks forward to a continuing partnership with ITU in support of Amateur Radio's contributions in domestic and global humanitarianism.''

No operating test, true. SHould there be? Absolutely. Just because the
testing system is deficient in its lack of SSB/FM operating exam doesn't
justify eliminating a code test. Fix the system by putting a SSB and an FM
operating test in place too.

** IONOSPHERIC AND GEOMAGNETIC STORM UPDATE **

18:30 UTC, 15 May 1997

Major to severe geomagnetic storming has been observed over approximately the last 9 hours as the main phase of the coronal mass ejection impacts the Earth. Some middle and high latitude magnetic observatories reported very large deviations in the magnetic field. Meanook in Alberta Canada reported a deviation of 1,450 nT between 12:00 and 13:00 UTC and Sitka in Alaska observed a deviation of 1,646 nT at the same time (normal quiet-time deviations are only between 5 and 20 nT).

Considerable expansion of the auroral zones into the northern U.S. states during the local evening hours produced visible auroral activity throughout many middle latitude regions. The Eastern U.S. was hampered by bad weather and hence was not able to observe much activity, but the western U.S. saw strong levels of auroral activity. Many reports of activity have even been received from New Zealand over the last 3 hours.

The expanded auroral ovals brought substantial ionospheric instability and increased absorption to middle latitude regions. Sporadic-E, spread-F and serious multipathing has all but shut down most HF circuits on middle latitude and poleward signal paths.

In the midst of all of this, Australian regions observed very large enhancements in critical F2-layer frequencies and F2-layer maximum usable frequencies earlier in the UTC day. For example, Learmonth reported critical F2-layer frequencies +90% ABOVE NORMAL 30-day values at 12:00 UTC. Townsville also reported enhancements as high as 90% above normal levels at 09:00 UTC, concurrent with enhancements observed at Camden of about 75% above normal.

These enhancements would have resulted in MUFs of near 30 MHz at 09:00 UTC for Townsville (opening the 10-meter band for long-distance communications) where normal MUFs are about 16 MHz.

The enhancement at Learmonth at 12:00 UTC would have pushed the F2-layer MUF to 20.9 MHz where the normal MUF was only about 11.1 MHz for this time of day. The biggest impression was the peak MUF for Learmonth at 09:00 UTC which increased from a normal level of 21.3 MHz to an impressive 34.0 MHz, easily opening the 10-meter bands. In fact, propagation should have been strong enough to keep the 10-meter band open near Learmonth for almost 4 hours between 06:00 UTC and 10:00 UTC! However, signal instabilities may have degraded propagation somewhat.

Propagation conditions continue to be strongly depressed at 18:30 UTC over most regions. Major to severe geomagnetic storming is continuing to be

observed over many regions. This activity should begin subsiding over the next 6 hours as the main belt of the disturbance passes by the Earth.

HF radio propagation conditions will require a day or two to recover from this activity.

Software to monitor these conditions yourself can be found at:
http://solar.uleth.ca/solar/www/swarm.html

A 46-page guide designed to help explain how to interpret space weather for radio propagation analyses can also be found at the above WWW site.

Dave,

This might not apply to you but might interest others interested in
making software for the ham market.

If your program is doing something useful (and not just running the
user interface) and you need a lot of memory, it might be possible to
use a DOS extender to write 32 bit code for any 386+ running MS-DOS or
higher. At least the Gnu-C and Watcom C/C++ compiler packages include
some DOS-extenders.

>rather than wrote memorization ...

Randomizing the order in which the alternative is printed on the test
sheet is a good idea, but using random initial values is not as easy
as it seems. First, you have to add the word "approximately" to many
questions, since due to rounding, you do not get the nice numbers that
you would expect. You also have to keep a look at number of
significant digits. There are combinations of input parameters that
will cause more than one alternative to be correct. Taking to the
extreme:

"The resistance is 1 ohm and the power 1 watt, what is the voltage"

A. 1 V formula used: P*R
B. 1 V formula used: sqrt (P*R)
C. 1 V formula used: sqrt (P/R)
D. 1 V formula used: P/R

This is a very unlikely combination, but it can easily happen that two
alternatives have exactly the same value (after rounding). If the
parameters are generated randomly, the VEs would have to check the
questions before giving the test. A better solution would be to make a
list of parameters, which are known to produce "nice" results and only
randomly select the parameters from this list at the test session.

This is a good principle.

>3) making sure that material is updated for currency as new modes and
>techniques become available and technical advances in the commercial
>world present opportunites for adoption of new techniques in the ham bands.

The question pool is going to be more or less outdated anyway, since a question pool is going to be used for years and the new mode must gain some degree of acceptance in the ham community before including it into the question pool. If you make questions about a new mode that looks promising but soon fades away, there is a lot of trouble removing these questions from the question pool.

Making a question pool *is* difficult. In Finland, a question pool was made last summer for the entry level (Basic and Communicator class) technical question exam. A lot of suggestions were collected from all over the country and also old questions from previous exams were included. Quite a few meetings were required until the question pool could be published. Four hours was the maximum effective length of a meeting.

There are quite a lot of things to watch for in each question:

* Is the question appropriate for the license class (since this question pool was for entry level, a lot of questions had to be scrapped).

* What previous things had to be learned to understand the question. For example, the number of questions requiring decibels were

minimized, since this would have required to teach about logarithms, since logarithms are not taught early in the school.

* Many questions had to be scrapped, since they were too outdated.

* Finding a wording that all could agree on took the most time :-). The question pool had to have a consistent terminology and since some questions were old and some were new, there were initially quit a lot of variations.

* Making a statement unambiguous was sometimes very problematic. Some could say with valid technical points that a statement was false, while other said with equally valid points that the statement was true, so we had to find an unambiguous wording for the statement. It is a very common tendency among hams to split hairs, so you have to be very careful with the wording.

The question pool consists of 2000 statements that can be either true or false. Usually 4 to 8 statements where collected under a common text.

Making the question pool has taken several years from starting to collect question to the first use in an exam.

Kam v8.0e Firmware and Front Panel?

I'm Spring Cleaning and undergoing other major shack changes.
As a result, I recently purchased a used Kantronics KAM all mode:
S/N 11K01-02340

Looks like a very nice unit, but the previous owner drilled a
small hole in the *front panel* for a reset switch and it has
the version 7 firmware (on a daughter card inside).

Anyway 4 questions:
1) Have info below, but is there an 800 number?
2) Where can I get the ver 8.0e firmware to upgrade?
3) Where can I get a new front panel?
4) I guess the daughter card makes it a Kam+ ?

requirement,
> but 5 wpm is little more that just having memorized the code. If the
> International requirement was dropped, I'd be for a no-code General.

Why *just* "general" ??? Why not "extra" ??? (bear in mind that there are
proposals about that would reduce our licensing structure to 2 classes
"entry-level" and "standard" (names are not important and subject to
change)

> Put Advanced at 10 wpm... General has HF privileges, so to get
> extra frequencies a knowledge of code wouldn't be out of place.

Since I intended to ask the question before I read ahead, I'll go ahead
and ask it anyway in the interest of understanding your feelings and
thoughts ... Why do you feel that a code test is relevant and appropriate
("so to get extra frequencies a knowledge of code wouldn't be out of
place")
as a means of "earning" TOTALLY UNRELATED priveleges??? I have
never been able to see, nor have I heard, a rational explaination that
really
justifies this ... all I've ever seen/heard were emotional arguments based
on things like "traditon" that have no place in government licensing
schemes.

> However, in the interest of reducing the number of license classes,
> I wouldn't even mind them eliminating the Advanced Class license, and
> adding those freqs to the General privileges.

OK ...

> For Extra, leave it a 20 wpm.

Why? What legitimate government purpose would be served?
(that's ALL that is valid as a criteria for government licensing)

> You can have a lot of fun and do a lot
> of HF operating without the Extra Class freqs (as I did for 25 years),

True, but neither is that a compelling reason for maintaining the status
quo ...

> Extra would just be a reward for extra technical knowledge and supporting
> ham radio tradition. I wouldn't even care if the Extra class band
segments
> were shrunk a little.

Proposals currently afoot contemplate combining advanced and extra theory
into the "standard" (arbitrary name) license class (5 wpm code test until
ITU
treaty requirements go away, no proposed ban on use of code, of course).

Besides, licensing is NOT about "rewards" .... even for "extra technical
knowledge" ... it's only about assuring necessary levels of competency
for the activities that the license permits (or conversely that the lack of
such
license prohibits or restricts ...)

> Maybe a license structure like:
>
> Tech (for operations above 30MHz); no code
> General (Tech with HF freqs); no code or slow code (5 wpm)
> Extra (mostly an honorary license class, with 20 wpm retained)
>
>
> HOWEVER, IMHO the technical tests should be increased in difficultly,

The 2 class proposal afoot contemplates the "entry-level" license as having
a technical test that's *at least* the equal of the full general theory
(current
no-code techs may have, but have not IMHO been tested for sufficient
technical knowledge to justify some of their privs ... like 1500W output
at frequencies that can cook flesh and fog corneas) This "entry-level"
class
would have a power limit in the 50-250 W range, possibly 250 on HF and
50 at the higher freqs where physiological concerns of exposure are
greater.

> and
> the publishing of the question pool should stop. It's just too easy
> to memorize the answers now.

It's unclear if the FOI and other government legal concerns would permit
this, but there are ways to address this ... expanding the pool to a size

that
precludes memorization and randomizing variables via computer generated
tests for each session (or even each individual) seem feasible ...

> After one night of reviewing the manual, and I passed Extra theory and
> missed only one question (and I had somehow missed reading the
> page it was on). I'm an engineer, but an ME not a EE, and even though
> I'd been a ham for 25 years, it should have been more difficult than
that.

I would agree that the technical tests are absurdly easy ... and should be
more comprehensive ...

> In technical tests, one of the things that makes you learn the material

>
> So there, I've added a little fuel to keep the debate churning
> for a while longer. :-)

I have not differences with any of the above quote ...
please comment on your thoughts relative to what I've said about
the 2 class proposal that's afoot ...

BWT ... the idea for conversion strategy that I've proposed is to
grandfather all current licensees at their current priveleges in
terms of power output for 5 years or until their next renewal,
whichever is longer ... at renewal, they would take a test, if
necessary to convert to the desired new class ...

for example
no-code techs would take a 5 wpm test and the "upgrade"
written to convert ... (since the "E-L" written is more rigorous
than the no-code tech written they already passed) ... generals
would convert to "E-L" with no test required, but would be subject
to the power limits and would gain frequencies, since there are
no class-based sub-bands under the new plan.

Advanceds would have to take an "upgrade" test to achieve
"standard" class with full-power privs, ability to be a VE, etc.

Existing extras would automatically be "standards."

When the ITU requirements for Morse testing go away, none
of the classes would require even the 5 wpm Morse test.

This begs the question of the continuation of a no-code class
with VHF and up privs until that time, with the same written as
the "E-L" but no HF privs ... this seems fair and reasonable, since

such a class exists today ... when the code test requirements go away, the no-coders would automaticallty convert to "E-Ls" and gain HF privs (based on having passed the "E-L" written exam.

Please also comment on the conversion strategy ...

> Yeah, but have you tested it empirically under Real World conditions,
> and does it work?

Of course ... I won a technical innovation award from NASA for this work
(it was originally targeted as a solution to the UHF mobile multipath
problem
encounted in systems involving mobile communications via geostationary
satellites ...)
and it's been both simulated extensively (with high-fidelity simulations)
and

tested empirically with brassboard hardware and a realistic hardware
fading channel simulator ...

> >If you'd like to know more, e-mail me and I'll arrange to provide more
info
>
> That won't be necessary. I don't need the tech details, just some

OK ... in summary I see no reason why this technique would not combat
the fading and spectral dispertion effects of the auroral reflection
channel ...

Get the V7A

I was struggling with the same decision, but the Kenwood is super.
Lot's of improvements over the 742 and/or 733. Not a triple bander -
agreed, but it's great! Has alpha with freq display at the same time.

Hello,

How To Drive For Free This Summer!

How would you like to win free gasoline for the summer? TravelSpots is giving away this prize in our 2nd annual 'Drive For Free This Summer' Contest. Use it for going to work or driving across the country! To be eligible to win, simply sign up at TravelSpots <http://www.travelspots.com>.

This week's travel tip: How to earn frequent flyer points without flying.
Visit our site and enter to win- Good luck!

Regards,

Judy

Hi,

I've been inactive for awhile and am just getting back to it. There used to be a semi-contest every year for ops using classic and antique rigs. Scoring was based on number of contacts multiplied by age of equipment (or something like that).

Does anyone know if it's still held? Who heads it up now?

SB PROP ARL ARLP020
ARLP020 Propagation de KT7H

Last week was very quiet in terms of solar and geomagnetic activity. Average solar flux was about the same last week as the week before, the average sunspot number was up about 10 points, and the average planetary A index was down by almost half. Conditions haven't stayed calm, however, because on May 16 the Boulder A index jumped to 33. This is an indication of a geomagnetic disturbance, which correlates with absorption rather than reflection of radio signals.

Geomagnetic conditions are already settling down, and should be quiet again this weekend and beyond. The next predicted upset should be centered around May 28. No increase in solar flux is foreseen, but that is because these predictions are based upon the rotation of the Sun, and there hasn't been any real sunspot or solar flux activity in the past month which might return and cause an improvement in conditions. As mentioned in ARLP019, conditions are unusually quiet, considering how long the solar minimum has lasted.

20 meters remains the best band for worldwide communications, with later openings to the west as daylight extends into the evening.

Sunspot Numbers for May 8 through 14 were 23, 14, 23, 26, 12, 15 and 17 with a mean of 18.6. 10.7 cm flux was 71.9, 71.6, 72, 72.3, 72.2, 73.8 and 73.5, with a mean of 72.5, and estimated planetary A indices were 5, 6, 5, 7, 3, 3, and 6, with a mean of 5.

Radio Awareness Month

DAYTON HAMVENTION AND LEAGUE JOIN FORCES FOR YEAR 2000 ARRL CONVENTION

Dayton's annual Hamvention will be the host site for the ARRL national convention in the year 2000. The Dayton Hamvention is the nation's largest single Amateur Radio event, attracting more than 30,000 participants to Dayton, Ohio, each year. The year 2000 will be the first time that the ARRL and the Dayton Amateur Radio Association (DARA), sponsors of the Hamvention, will combine their talents for this yearly event. A formal announcement was made May 16 in Dayton as the 1997 Hamvention opened its doors. The Hamvention got its start as The Southwestern Ohio Ham-vention in 1952.

"The number of enthusiasts Dayton attracts from around the United States and from around the world, combined with the quality of the event, is unparalleled," said ARRL Executive Vice President David Sumner, K1ZZ. "Dayton, Ohio, is the natural site for our national convention, and we are delighted to be working with members of DARA and Hamvention officials in this combined effort to launch Amateur Radio into the 21st century."

In addition to the more than 30,000 Hamvention attendees, the three-day event brings together thousands of flea market vendors, ham radio and

electronic equipment manufacturers and other exhibitors. As its contribution to the event, the League will bring additional Amateur Radio programs, national-level radio awards and increased publicity in QST.

ARRL Great Lakes Division Director George Race, WB8BGY, said he was pleased that the League and DARA would be working together "to assure the future of Amateur Radio as we enter the 21st century."

"Over the years, Amateur Radio operators have been instrumental in the development of most of our electronic technology," he said. "Amateur Radio has sparked the imagination of young and old alike, leading them to become teachers, engineers and even astronauts. The ARRL and Dayton Hamvention working together, will give those who attend a glimpse at what lies ahead in technology and how they can be a part of it."--Jennifer Gagne, N1TDY

ITU CONCLUDES PRE-WRC-97 TALKS

The ITU Conference Preparatory Meeting (CPM) for WRC 97 has just concluded two weeks of deliberations in Geneva, Switzerland. The work of CPM has resulted in the preparation of a 250+ page book of combined technical output from the various ITU study groups as well as the concerns of the member states.

Issues of special interest to radio amateurs that were taken up in preparation for WRC 97 included the possibility of additional frequency allocations to the Mobile Satellite Service operating below 1 GHz--familiar to hams as "the little LEO issue." No specific frequencies have been identified in the CPM report for reallocation. Although the report does address a number of sharing possibilities, it makes no mention of sharing with the Amateur Service. In addition, a new concept of "broad allocations" was introduced. If adopted, this concept would result in individual nations being able to identify and allocate frequencies from a broad pool of service allocations. This concept, being quite new and unstudied, only resulted in a call for future studies by the ITU. However, it will be watched closely by radio amateurs as it might have the potential of representing a threat to our bands. It is likely that any such studies will be prolonged over a multi-year period.

Of course, the work of WRC 97 will be guided by specific proposals submitted by individual nations. At present, countries have not yet finalized nor submitted their proposals. Until they do, the amateur community will not be able to accurately assess the threats to our bands for this conference.

Unfortunately, the Little LEOs are not the only new service searching for spectrum. One newcomer is the Earth Exploration Satellite Service's use of synthetic aperture radar (EESS active) for a system of spaceborne sensors designed to collect information about environmental issues and other similar data. A variety of frequencies is being sought, possibly including 430 to 440 MHz. The amateur and amateur satellite service status in this band is somewhat complex, varying by ITU Region and even by individual country. So far, studies of sharing possibilities between the amateur and EESS (active) have not shown them to be compatible because of the interference level

experienced when the two classes of stations are within line of sight.

There is also a type of EESS (active) which would make use of 1215 to 1300 MHz which is of concern to amateurs (the amateur allocation is 1240 to 1300 MHz). Studies here show compatibility with some types of services but still represent a potential source of interference to amateur operations.

Over the next 90 days, the various member countries of ITU interested in seeking specific allocations for these services at WRC 97 will be making proposals for the work of the conference.

The ARRL--as the spokesman for Amateur Radio in the US--is actively participating in the work of the relevant ITU bodies on these matters along with the IARU.--Paul Rinaldo, W4RI, and Larry E. Price, W4RA

HAMS ABOARD SHUTTLE FLIGHT; KB5UAC TO BE ACTIVE FROM MIR

Ham-astronaut Mike Foale, KB5UAC, took off on the space shuttle Atlantis Thursday, May 15, to swap places with colleague Jerry Linenger, KB5HBR, aboard the Russian Mir space station. The mission is the sixth docking with the Mir space station. During the STS-84 pre-flight press conference, Foale talked about ham radio and his stay aboard Mir. Foale is scheduled to remain aboard Mir until September.

Other hams on the STS-84 crew include Commander Charles Precourt, KB5YSQ, and Mission Specialists Edward Lu, KC5WKJ, Carlos Noriega, KC5WKK, and Jean-Francois Clervoy, KC5WKG. The Atlantis is carrying badly needed replacement equipment for the Mir space station, including a new oxygen-generation unit.

Foale said he took his ham radio exam in preparation for the STS-56 shuttle mission. "My commander then [Ken Cameron, KB5AWP] was a pretty serious radio ham, and he encouraged the whole crew to do it," Foale said. "Since then, I've enjoyed taking part in those activities, and I do look forward very much to using the ham radio on the Mir throughout my stay there to talk to anybody who can speak to me in either English, American, or Russian."

Foale said he's open to talk about anything and with anybody. "I really enjoy having slightly longer contacts than just the brief collections of QSOs we do on shuttle. As a long-duration crew member, I'm hoping that [hams] will allow me to talk longer with them, so I can have some contact with them and their countries and understand the people's conditions where they live as I fly over them."

Meanwhile, NASA says its Shuttle Web will provide continuous audio and video coverage of the STS-84 shuttle-Mir mission in a second test of the latest technology for streaming video over the Internet. Working with Technology Interface Inc. and other commercial Internet service and content providers, NASA will use a Dutch-manufactured product called "WebCam" to stream NASA Television programming over the Web. In addition to "cybercasting" the launch and landing, NASA will transmit live video of the activities of the combined Atlantis-Mir crew, all mission briefings and the daily Mission Update program. Links to the video stream through American and European

reflectors are available on the NASA Shuttle Web, http://shuttle.nasa.gov.--Thanks to Philip Chien, KC4YER and to NASA

W1AW UPGRADES ITS SATELLITE CAPABILITIES

With the installation of a better antenna system, W1AW has upgraded its satellite capabilities. The station's Kenwood TS-790A now feeds a Cushcraft A148-20T crossed Yagi for 2 meters and a Cushcraft 416-TB crossed Yagi for 70 cm (with Advanced Receiver Research preamps for 2 meters and 70 cm mounted on the tower), positioned using a Yaesu G-5400B Az-El rotator coupled with The Kansas City Tracker. The antennas were recently reinstalled atop one of W1AW's three 60-foot towers. Antennas are fed using 1/2-inch Andrew 50-ohm Heliax. W1AW Station Manager Joe Carcia, NJ1Q, says the Kansas City Tracker consists of a PC plug-in card and software and provides for automatic tracking of satellites. The Kansas City Tracer uses InstantTrack, a satellite-tracking program that uses Keplerian elements (available from a variety of sources) to automatically position the antenna system.

Shortly after the improved satellite system was installed, Carcia tried it out during an AO-27 pass during his off-duty hours. "I was able to QSO VE6ITV, WD8CDP, K4RS, and W0OQC," he reports. "I had myself a little pileup there."

W1AW is looking to upgrade its TNC from the 1200-baud-only unit it now uses.

Carcia says he plans to have W1AW use the upgraded setup to make contacts whenever it is feasible. "I certainly would like to be a regular on AO-27, and maybe the Russian satellites," he said. "A number of years ago, we used to send bulletins through OSCAR 10 during a good pass. So, that is something we might revisit."

Carcia said he's looking forward to making other satellite station improvements to be ready for Phase 3D later this year.

THE RETURN OF THE FMT?

Remember the W1AW Frequency Measuring Tests? Well, John Dilks, K2TQN, reports the Boat Anchor Net will resurrect the FMT this month. To maintain the flavor of the old FMTs, participants must use vintage, tube-type gear in making their measurements.

The first BA FMT will take place Wednesday, May 21, 1997, at 8 PM EDT (Thursday, May 22 at 0000 UTC). Transmissions will be on the 80, 40, and 20 meters on the following schedule:

The first run starts at 0000 UTC on 80 meters: Transmitter tuneup, 0000-0005 UTC; equipment checkout, 0005-0010 UTC; test period, 0010-0015 UTC. The 40-meter test starts at 0015 UTC: Transmitter tuneup, 0015-0020 UTC; equipment checkout, 0020-0025 UTC; test period, 0025-0030 UTC. The 20-meter test starts at 0030 UTC: Transmitter tuneup, 0030-0035 UTC; equipment checkout, 0035-0040 UTC; test period, 0040-0045 UTC. The second run will begin at 0200 UTC and follow the same schedule.

During the equipment checkout period, the transmission will be on CW at 13 WPM: VVV DE K9EUI FMT TO FOLLOW (followed by 5 seconds of steady carrier; sequence repeated for 5 minutes). During the actual test period, the transmission will be on CW at 13 WPM: QST QST QST DE K9EUI WITH FMT TO FOLLOW NOW (followed by 20 seconds of steady carrier) VVV DE K9EUI FMT (repeat for 5 minutes) VVV DE K9EUI END OF FMT 73 SK.

Transmissions will be near 3600, 7175, and 14060 kHz (+/- 5 kHz). Transmissions during the transmitter tuneup and equipment adjustment periods will be close to, but not right on, the frequency to be measured. The only transmission that really matters is the actual test transmission.

Here are the ground rules for the Boat Anchor Frequency Measuring Test:

1. All equipment used in the reception, calibration, and measurement of the FMT must be tube-type. No solid-state gear may be used.

2. Logs must be submitted to K9EUI via e-mail to broehrig@admin.aurora.edu and received no later than 0000 UTC May 29, 1997.

3. Logs must include your name, call sign (if any), and e-mail address; a list of all equipment used for the test; the measured frequencies; and time of each measurement.

4. You may take as many measurements as you like, but only those taken during the actual test period will be allowed. Only one measurement per band per run is allowed on your submitted log. If you take more than one measurement, total them up and average them. In other words, each log may contain up to six (6) readings.

The results will be posted to Boat Anchor reflector as soon as possible after the deadline. For more information, contact Bob Roehrig, K9EUI, in Batavia, Illinois, tel 630-844-4898; fax 630-844-5530; e-mail broehrig@admin.aurora.edu.

VE8RCS, ELLESMERE ISLAND, CLOSES DOWN

Mike Lonneke HA/W0YR, in Budapest, Hungary, reports that during a 20-meter SSB QSO with VE8RCS on Ellesmere Island on May 12, the operator, Steve, informed him that Station "Alert" and Amateur Radio station VE8RCS would shut down on May 15. Steve, an unlicensed but authorized operator who is studying for his own call, told Lonneke that the shutdown came much sooner than expected. Ellesmere Island (NA-008) has been on the air for more than 30 years as the communication link as the High Arctic Weather and Experimental Station. It is about 450 miles from the North Pole.

Experiments at Station "Alert" have included measurement of global warming indicators, pollution in the global regions and measurements made by the Canadian team for other governments. Now, according to Steve, all functions will be automated. Steve said the step to full automation had been contemplated for some time but "they moved this along much faster than anyone thought. All we have left now is this 100-W transceiver, the microphone and the 5-element Yagi. Everything else has been boxed up."--Mike Lonneke HA/W0YR

ARRL PUBLICATIONS OFFERS EXTENDED HOURS, NEW ITEMS!

To better serve our members and customers, the ARRL publications order desk has extended its hours! Now, you can reach an ARRL customer service assistant from 8 AM to 9 PM Eastern Time, Monday through Friday, tel 888-277-5289 (US only). Our friendly staff will be available to help you place your order, renew your membership, or find an ARRL dealer in your area. For all other League activities, please contact the appropriate department or call 860-594-0200, Monday through Friday, 8 AM to 5 PM.

TravelPlus for Repeaters CD-ROM is among the snazzy new products available from ARRL Publications. Travel Plus for Repeaters is a sophisticated repeater-locator program that includes detailed maps for the US and Canada. Define a route, and TravelPlus tells you which repeaters will be in range along the way. This program offers many features, including print capability for maps and repeater lists, and it's Windows 3.1 and Windows 95 compatible. It's available now. Order No. 5862. The price is $39.95.

The brand-new 18th edition of The Antenna Book also is now available. The latest edition of this popular ham radio reference includes enhanced software, and several chapters have been rewritten completely or thoroughly updated and revised. But the price is still $30. Order No. 6133.

Also just a phone call away (all prices are retail):

* Now You're Talking! (3rd edition)--All you need to get your Technician license (for exams given on or after July 1, 1997). Order No. 5978, $19.

* Packet: Speed, More Speed and Applications (2nd edition). Order No. 6052, $15.00.

* Ham Radio: Your Ticket To Worldwide Adventure by Edward V. Hammond, WN1I. Order No. 6230, $12.95

Call toll-free, 888-277-5289, to place your order or visit the ARRL Publications dealer in your area.

CHARLES HAROLD CAMPBELL, W2IP, SK

Veteran Amateur Radio operator and ARRL member C. H. "Harold" Campbell, W2IP, of Mount Vernon, New York, died May 8, 1997. He was 98. Campbell was a 71-year member of ARRL.--Frank Fischedick, AI2D

IN BRIEF:

* Electron is 100, transistor is 50: Scientists recently marked the 100th anniversary of the 1897 presentation before the British Royal Academy of Sciences of a paper by physicist J. J. Thompson that first recognized the existence of the electron. In his presentation, Thompson described how he discovered, experimentally, that cathode rays were negatively charged particles which he dubbed electrons. The transistor turns 50 years old this year. It was invented by Bell Labs (now Lucent Technologies) in December, 1947. It costs one million times less to make a transistor today than it did

30 years ago.--Wired News/Jim Fitton, W1FMR

* Ham radio featured on NYC cable show: Ham radio already has been the subject of two editions of The Pulse of New York, a cable TV show broadcast in New York City, and the producers are planning additional programs on the topic. The first show, broadcast live on March 8, included an introduction to ham radio, licensing basics, a display of HF and VHF equipment, and a discussion of the role of ham radio in public service and the community. Past ARRL Hudson Division Director Richard Sandell, WK6R, moderated the show, and Assistant Directors George Tranos, N2GA, Diane Ortiz, K2DO, and 12-year-old Matthew Karl, KG2HV, participated. The half-hour show is broadcast live (3:30 to 4:00 PM) on local channel 33 in Manhattan to an audience of approximately 7,000 to 10,000 viewers. A second program, featuring Hudson Division Director Frank Fallon, N2FF, and Assistant Director Carole Perry, WB2MGP, was broadcast on March 29. The producer is Robin Vargas, N2YSY, of Robin Productions. She, Ortiz and Sandell are planning additional shows.--The Hudson Loop

* Radio merit badge book depleted: This might be a good sign. Maria Dahl of the electronic publishing division of the national office of the Boy Scouts of America reports that BSA HQ has run out of the Radio merit badge book. "Three thousand is considered to be a year's supply, and we have depleted the supply before year's end," she said. This is good news to hams who know the importance of capturing the interest of young people and getting them excited about our great hobby.--Rosalie White, WA1STO

* Ham Radio & More QSY: The Ham Radio & More radio program has returned to 5.070 MHz for its live weekly broadcast on WWCR. The show airs live Sundays at 6 PM Eastern Time (2200 UTC) on WWCR and on many local commercial stations.--Len Winkler, KB7LPW

* New on-line publication: antenneX, a magazine all about antennas, experimentation, construction and signal problems, is online at http://www.antennex.com. The editor is Richard Morrow, K5CNF. Several areas offer free access. A six-month subscription is $19.97 in the US ($21.52 for Texas residents, including state sales tax)--Jack L. Stone

* Pennsylvania Amateur Radio Awareness Month: By a unanimous vote, the General Assembly in Pennsylvania has declared the month of June 1997 as Amateur Radio Awareness Month. The resolution, approved April 15, cites the contributions of ham radio, including its "significant services to the citizens of this Commonwealth during natural disasters."--Earl J. Foster, W3BKF

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

The only place I recall seeing the red herring is in your posts. I don't recall any of the "pro-code" posts that really believed that the anti-code-test folks are seeking to outlaw Morse Code.

Hmmm. . . :-)

ARRL Bulletin 25 ARLB025
From ARRL Headquarters
Newington CT May 16, 1997
To all radio amateurs

SB QST ARL ARLB025
ARLB025 ITU concludes pre-WRC-97 talks

The ITU Conference Preparatory Meeting (CPM) for WRC 97 has just concluded two weeks of deliberations in Geneva, Switzerland. The work of CPM has resulted in the preparation of a 250+ page book of combined technical output from the various ITU study groups as well as the concerns of the member states.

Issues of special interest to radio amateurs that were taken up in preparation for WRC 97 included the possibility of additional frequency allocations to the Mobile Satellite Service operating below 1 GHz--familiar to hams as ''the little LEO issue.'' No specific frequencies have been identified in the CPM report for reallocation. Although the report does address a number of sharing possibilities, it makes no mention of sharing with the Amateur Service. In addition, a new concept of ''broad allocations'' was introduced. If adopted, this concept would result in individual nations being able to identify and allocate frequencies from a broad pool of service allocations. This concept, being quite new and unstudied, only resulted in a call for future studies by the ITU. However, it will be watched closely by radio amateurs as it might have the potential of representing a threat to our bands. It is likely that any such studies will be prolonged over a multi-year period.

Of course, the work of WRC 97 will be guided by specific proposals submitted by individual nations. At present, countries have not yet finalized nor submitted their proposals. Until they do, the amateur community will not be able to accurately assess the threats to our bands for this conference.

Unfortunately, the Little LEOs are not the only new service searching for spectrum. One newcomer is the Earth Exploration Satellite Service's use of synthetic aperture radar (EESS active)

for a system of spaceborne sensors designed to collect information about environmental issues and other similar data. A variety of frequencies is being sought, possibly including 430 to 440 MHz. The amateur and amateur satellite service status in this band is somewhat complex, varying by ITU Region and even by individual country. So far, studies of sharing possibilities between the amateur and EESS (active) have not shown them to be compatible because of the interference level experienced when the two classes of stations are within line of sight.

There is also a type of EESS (active) which would make use of 1215 to 1300 MHz which is of concern to amateurs. Studies here show compatibility with some types of services but still represent a potential source of interference to amateur operations.

Over the next 90 days, the various member countries of ITU interested in seeking specific allocations for these services at WRC 97 will be making proposals for the work of the conference.

The ARRL--as the spokesman for Amateur Radio in the US--is actively participating in the work of the relevant ITU bodies on these matters along with the IARU.

How 'bout yet another opinion from someone who lost interest in the hobby years ago but is about to jump in again?

I was first licensed in 1976. Tubes were going out, solid state was comming in. AM was all but gone. 2-meter repeaters with touch-tone was the rage. (The theory tests of the time covered a little of all these technologies.) Personal computers were still lab experiments. Satellites were just starting to make an impact on communications. Hams even had a few put into orbit. 75 and 20 meters were full of lids running 2 gallons or more. 2-meters was full of lids running around with HTs kerchunking and demanding money to use the repeaters. CB was the craze and everybody was freaked out that some of those lids might sneak down and get on the ham bands. And ... there was this tremendous debate over code requirements and the feeling that all new hams were just going to be appliance operators.

What's changed?
Tubes are out. CB is not the craze. Everybody's got a personal computer. That's all. Oh yeah, cell phones and the internet (including news groups like this) obviate the technical challange to randomly DX. EVERYONE (who can afford it) has this available, NO license of any kind required. Don't need the troposphere anymore. Post it on the 'net. Same as a CQ. E-mail. Same as calling your pal on a sked. Cell phone call. Same as repeater with touch-tone (don't have to keep calls under 3 minutes anymore, either). I can even talk on the internet. And send pictures. And play music (still illegal, I believe, on our bands). Don't believe there's any CW on the 'net, though. However, all the other modes are covered (voice, pictures, and RTTY.)

Refinements of technology have changed "need" for the Amateur Service, at least in developed countries where cell phones and the internet abound. You say that 'new' techniques can allow communication at a better S/N than CW? So what. They all depend on automation. If I want to use a keyboard, I'll just use e-mail or a web page or a news group. I like the distance I can get using modest power in CW mode in the HF bands.

Having said all this...

1) The code and written test were always and still are used as a discriminator to award bandwidth to those who passed them. Duh!
2) I used to think that the anti-code folks were for the most part cry-babies. And maybe I still do. But the world has changed and maybe it's time to change the rules a little.
3) The rude folks on 75, 20, and 2 meters have 'always' been there and probably always will. I'm not interested in joining their club. But ... their interest is in voice communications. Many of them are possibly also interested in technical aspects such as gain antennas, digital circuitry (for repeaters), and so forth. There are even more nice hams on all bands that are only interested in voice communications. They are not interested in CW.
4) Why not some HF (and VHF) bands that don't require CW as part of the price of admission? Wouldn't have to be all the current voice segments. Maybe still require written on regulations and theory.
5) Why not some bands that are CW-only that don't require theory exams? Just regulations.
6) Maybe keep some of the bandwidth configured as it is today. Then maybe we can actually satisfy more people. The incentive to upgrage would still be there, but the absolute requirements that exist today would not.

I think technology is now past the point where the Amateur Service consistently makes a substantial contribution to the state-of-the-art in communication technology via the ether. I think we should focus on operating rather than technology. Concentrate on providing, and being prepared to provide, communications to remote areas and during emergencies. (The phone company may be washed away, but some ham can still get through with a few watts an a piece of wire). Everything else is just what it has always been, though few want to admit it: yaking about the weather and the equipment. It's fun. That's it, no more, no less.

Let the flames begin ...

TNX ES 73,
Steve Robertson

This site mentions that the data used by the program is public domain, and is received over the internet, from radio soundings of the ionosphere at various obvervatories. Is it possible to directly access this data over the net? [ie: without buying this software] Does anyone have information on how to do this?

Chris

I'm sorry, sir, but your information is in error. Type acceptance is not
required for radios used on bands controlled by the National
Telecommunications and Information Administration (NTIA). I know this because
in addition to being a ham, having a GROL, etc., I am a user of several
NTIA-controlled bands, where modified ham radio usage is permitted. In fact,
tommorow I'm going to be at Sheboygan, Wisconsin legally transmitting on
non-ham frequencies with a modified Kenwood TH-78A, and my doing so will not
violate any regulations nor violate any laws.

UPS and several other companies usually have booths inside for shipping.
I don't remember seeing the postal service there, but if UPS serves where
you live, your problems are solved. Also, if you're flying, you can often
take things as baggage if they're not too large. Either way, don't buy a
beam that can't be shipped, or you'll have problems. However, shipping
by various companies is available inside the Arena, look at the nice
booklet given out each year for details. -art clemons-

Right on the nose! I'll be willing to help this issue any way I can. We agree on something! Kinda scary! Just kidding, but we (all hams) do need to come to some common ground on how to resolve these issues. The ARRL and FCC are not going to do it. Its ultimately up to us. See! I'm not such a bad guy!

And just what form would these tests take, exactly? Demonstrate the
ability to key the mike and speak?

>testing system is deficient in its lack of SSB/FM operating exam doesn't
>justify eliminating a code test. Fix the system by putting a SSB and an FM
>operating test in place too.

Yes, let's add operating tests for ATV, Slow Scan, AM, Packet and
TCP/IP, EME, DX, Contesting, ARL message handling, antenna building,
soldering, and dozens of other variations on our diverse hobby. This
will surely cure that nasty congestion problem on 20 meters, anyway.

We need to be making it EASIER to become a ham, not HARDER.

How does it make sense? What would be the objective for having a radiotelephone (SSB and FM) practical examination? What is it about current amateur on-air practise that such testing would solve?

Such testing would not solve any perceptable problem current used by amateurs. It is indicative of the desparation of some pro-code testing advocates whereby in order to legitimize one useless test, they suggest another useless test. The problem is that two useless tests are worse than one useless test. Besides, a Morse code examination is not what one would call a legitimate practical test because the conditions under which it is administered is unrelated to operating an amateur station. It is merely a confirmation that the individual has been conditioned sufficiently to copy "didah" and write the letter "A".

With that in mind, I would be pleased to know from Foster how it makes sense to propose a useless radiotelephone examination in the belief that it legitimizes an irrelevant Morse code examination?

Source record: 198215

Hello there !
I'll make things very simple just for basics. A phone patch alows you to make phone calls. And they can be very clear. The phone line is connected to the patch wich in turn is connected on the repeater. So you need a repeater or your club might have the patch as a service to their members . You also need a radio that can transmit DTMF tones. (The same one used on telephone lines). These tones alows you to open up the patch(in other word tell the repeater that you want the phone line). Most clubs dont have open patch. So you become a member (pay them) , they give you a code for the patch . You hit the codes (DTMF TONES) and then you hear the line come on. From there punch in the phone number that the patch covers(usually within your area) and bingo ! Your on the phone.
Using the patch can be fun, but you will be heard by everybody, you cant make commercial calls, everybody will have a differant opinion on how to use the patch (some what frustrating), cant dial 0 or make long distance and usually cant call 911 either because the club dont want to deal with long distance charges or other troubles the patch may bring. Restricted by time limit and other stuff.(should preferably be use to call another ham) Phone Patch are interesting but cant replace a cellular phone especially if you want to be able to receive calls. Check with local clubs to make sure of rules and regulations and fees for using a patch in your area !
Hope this could help you out.

3134. PLEASE HELP !

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-16 00:00:00 UTC
From: "Matthew A. Erickson" <kk5dr@io.com>
Message-ID: <337D02AA.7CCE@io.com>
Source record: 198219

There is a growing problem in ham radio today, but it's been around for along time. It's has several variations, but has similar origins.
The first is called "Competitive Compultion Disoder" or CCD, which is usually found in "contesters", & some "dxers". Where in, they are overly competitive in their radio operations, willing to go to extreme lenths to "out do" the other guys. Also, they are compelled to use "any means" nessesary to achieve "supeiority", over other hams. Those who spare no expense to have the most ellaborate station, and the loudest signal on the air, are prime examples of this disoder.
Next is called "Coversational Defficite Disoder" or CDD, which is found mainly in "contesters", but also is heavliy infested in "dxers". This disorder effects their ability to coverse with other hams, limiting the exchange to little more than , call, first name, and the all important signal report, which is almost allways 59, regardless if it accually is or not. Once these guys have worked every station on earth, CDD often degrades into CCD. Once CCD has run full course, the ham usually becomes "inactive". Some return, many years later, fully recovered, and some never return.
Please help. These guys feel that there is nothing wrong with them, much like "alcoholics". Through therapy and consuling, we can save them from themselves.

Thanks for your help in curing this horrible disorder.

In ay case, it is certainly a crime on the local level.
Probably involves trespass, malicious mischief,
criminal trespass and maybe other local criminal
actions. If a firearm is used (shooting down an
antenna) you can probably add several other firarms
violations against somebody that did that.

>I could pass the extra written exam and probably pass a 20 wpm multiple
>guess Morse code exam but why bother?

It's so interesting to see the code/no-code debate still going.
It's one constant in a changing world. :-)

I was licensed in 1968, and held an Advanced Class license from 1970 to
1995. For me, although I always "intended" to upgrade to Extra
"eventually," the real incentive was a 1x2 call. I've always wanted a 1x2,
and that was what it took to get me to upgrade. I even got my
initials, so it was really worth the effort for me.
Whether I am talented or untalented, I'm not really more or less
so since I upgraded. That observation sounds like a swipe at
20 wpm, and evidence that the observer just doesn't know enough Extra
Class hams to make such a judgement.

As for the code and code testing, I have generally been a traditionalist
and up until last time a no-code license was proposed, I opposed a
no-code license. Finally, the last time I supported the no-code license
and it passed (and no doubt, my support was critical in causing it to
pass :-)

I have several friends who are highly skilled engineers in electronics,
and they always said the code was preventing them from getting a license.
And, as soon as the code requirement was dropped, they got their license.
I'd certainly say that ham radio is better off for them being licensed.

During the aftermath of Hurricane Fran, I worked in several
emergency operations side-by-side with "no-code" Techs. They did
a great job, and we needed them. So again, ham radio is better for
their being hams... code or not.

Because of the International requirement, I'm not sure totally
eliminating the code would be appropriate, but I'd advocate 5 wpm
General. They would "know the code" to meet the International requirement,
but 5 wpm is little more that just having memorized the code. If the
International requirement was dropped, I'd be for a no-code General.
Put Advanced at 10 wpm... General has HF privileges, so to get

extra frequencies a knowledge of code wouldn't be out of place.
However, in the interest of reducing the number of license classes,
I wouldn't even mind them eliminating the Advanced Class license, and
adding those freqs to the General privileges.

For Extra, leave it a 20 wpm. You can have a lot of fun and do a lot
of HF operating without the Extra Class freqs (as I did for 25 years), so
Extra would just be a reward for extra technical knowledge and supporting
ham radio tradition. I wouldn't even care if the Extra class band segments
were shrunk a little.

Maybe a license structure like:

Tech (for operations above 30MHz); no code
General (Tech with HF freqs); no code or slow code (5 wpm)
Extra (mostly an honorary license class, with 20 wpm retained)

HOWEVER, IMHO the technical tests should be increased in difficultly, and
the publishing of the question pool should stop. It's just too easy
to memorize the answers now.
After one night of reviewing the manual, and I passed Extra theory and
missed only one question (and I had somehow missed reading the
page it was on). I'm an engineer, but an ME not a EE, and even though
I'd been a ham for 25 years, it should have been more difficult than that.

In technical tests, one of the things that makes you learn the material
more thoroughly is the fact that you don't know how the test maker will
try to "trip you up." However, with the amateur tests you DO know
exactly how the questions will be framed. So you can create
arbitrary "rules of thumb" that will work for the test, but not for
all of the circumstances in real life. Not good.
And I'd definitely be in favor of more questions on digital modes.

So there, I've added a little fuel to keep the debate churning
for a while longer. :-)

Welcome to the joys of operating and maintaining a repeater...
Where else do you get to play with a system that has a 175 dB
of dynamic range.

I wouldn't be suprised if you could get the 'cracklies' by rubbing
two peices of metal 20 feet away from the antenna with no
connections to the repeater system at all. In fact, a friend of
mine had to go lubricate his neighbors attic fan regularly to keep
his repeater cracklie-free!!

I wouldn't be that quick to blame the 'cracklies' on grounding.
Remember that anytime you have two dis-similar metals touching
each other, you have the potential for galvanic corrosion and an

opportunity for introducing a non-linearity (a crude diode) into the system. Changing the non-linearity by changing the pressure on it or by moving the surfaces causes de-sense. I suspect that the non-linearity is modulated at 600 KHz when wiggled but am unable to make any measurements to confirm this.

Since I can't afford a 'real' repeater antenna, mine comes down every year for cleaning. It is completely disassembled, cleaned, all joints are lubricated, and then it is reassembled. It had a steel mast for a week but we never could make that work well. An aluminum mast fixed everything up (the antenna is aluminum).

As for a definition of a "good connection", for me that meant absolutely corrosion free, lubricated, and with both conductors of the same metalurgy... and remember a connection is made any time two metal objects touch each other.

I'd recommend the 'divide and conquer' strategy.

It has almost universally been accepted that some of the math on the
higher license class examinations requires a degree of schooling one
normally does not obtain until they are in their teens (phase angles,
etc.)

>> This is called "mode-based" testing. Every test you take you immediately
>> gain additional operating privileges. It is not complicated (other than
>> the fact there are "more" tests,

>aspects of the different modes and basic theory, without creating another
>complicated, baroque system of "brag-rag wallpaper."

Give us a break, Carl. It is *not* more complicated, it is downright
simple. Endorsements have nothing to do with "brag rag wallpaper"
(exactly how does your FCC license allow you to do this?) it has
everything to do with ensuring you are technically and operationally
competent in the modes you wish to operate.

>> but more tests with less license classes
>> helps to ensure technical competence, something Carl and the anti-code
>> crowd claim they want.)
>

>Less licence classes in the only sensible thing I've *ever* seen MD say
>or support ... but more tests? The VEs will pitch a bitch,

Give W5YI and the ARRL a cost/benefit analysis on how many millions of
dollars they will make selling license examination study guides, and they will
endorse the idea faster than you can post a message to USENET.

>the FCC will
>*never* want the additional record-keeping complication,

Additional record keeping? Hah! A single variable-length alphanumeric field.
A=CW, B=SSB, C=FM, D=RTTY.... Yeah, that's complicated all right.

>and it presents a very complicated enforcement situation as well.

1) The FCC doesn't enforce amateur spectrum much anymore so this whole
line of reasoning is moot, and 2) how would enforcement change from today
anyway (if someone is going to operate illegally under the endorsement
system, why wouldn't they just illegally operate today under the existing
system?)

>KISS ... that's a basic advanced engineering principle ... eliminate
>unnecessary complication that produces no significant benefit ...

KISS is inherently poor design. It doesn't factor in items like
expandibility. It looks at requirements and proposes a minimal
solution.

>a single, well-conceived test can assure the goal of technical competence.

In other words, force people to learn something they don't want to,
because >you< think it is important. In other words, make people go
through a complicated theory HAZING ritual because you happen to think
that theory is important.

I agree about the great conditions on 5/15...from about 045 utc to 0200
I logged some nice far east catches (Thailand, VOR/from Komsomal'sk
'Amure, Philippines, India).

I guess that's the rumor. I bought AT-600 a couple days ago.

Almost any tranceivers can be modified. How about Yaesu50R ? same
thing. I think we shouldn't focus on AT-600 too much... I am sure
we do because of HTX-204...

SILENT KEY

It is with regret that we advise of the passing of Peter Alexander VK2PA of Port Macquarie, on Wednesday 14th May. Peter will be sadly missed by his family and friends in Amateur Radio.

Vale Peter Alexander VK2PA

DIVISIONAL NEWS

TRASH AND TREASURE SALE

The next Trash and Treasure will be held on Sunday 25th May at Amateur Radio House, 109 Wigram Street, Parramatta.

Sellers in at 12 noon.

Buyers at 1pm.

This is more than a sale - it is also a good place to meet old friends, or make new ones.

There are a few pre-loved HF transceivers available, and the Office Book Shop will be open.

-- Pat Leeper VK2JPA

WICEN NEWS

There are several new events on the WICEN calendar. WICEN Hunter region will be providing safety communications for the "Lake Macquarie Australian Half Marathon" championships on Sunday 22nd June, and the event co-ordinator will be Peter VK2YGM. Also, Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB. If there are any ardent cyclists among the listeners who would like to join the trek and help raise funds for CanTeen then please contact Pamela Gee on (049) 26-2555 for more information.

Next month sees the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG on the 7th June; we hope to have further information in a later broadcast. This is followed by the afore-mentioned Lake Macquarie

Australian Half Marathon, run by Peter VK2YGM.

WICEN has been asked to provide a communications network to support this year's running of the Bushwalkers Wilderness Rescue Rogain. The event consists of approx 100 teams, with about 400 people, navigating through the bush to locate various checkpoints. There are two classes of entry, either a one day only or a two day event with teams staying out overnight in the bush. The event will be held in the bush, west of the Central Coast on the weekend of the 28th and 29th of June. If you're interested in participating in an event held out in the sticks that does not entail noisy and dusty rally cars or hot and smelly horses then this could be the event for you. For more information, or to offer your services please contact Alan VK2YYJ on telephone 015-097-217, or packet radio as VK2YYJ at VK2TGB

Future events include the Bridge to Bridge Speedboat Classic, run by David VK2KLX, on 6th July; the Colo 24-hour Horse Enduro is run by Neil VK2XNF on 12-13th July; the annual City to Surf Fun Run will be on 10th August; the Oberon Car Rally, also run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

DX NEWS

ANNOBON ISLAND - A group of members of the Spanish Radio Amateur Association, URE, will be active from here as 3C0DX starting May 20. Look for them to be active on all HF bands, including the newer bands. Some satellite operation is expected, and they can be found on the downlink frequencies of 29380 and 29430 Khz. Look for SSB activity on 50.133 MHz, and CW on 50.090 MHz. Look for RTTY activity on 7034,

10114, 14084, 18094, 21084, 24924 and 28184 kHz.

POLAND - Look for Special Event Station 3Z0JP between May 20 and
June 15, to celebrate the visit of Pope John Paul II to Poland. Activity will
be on CW and SSB with operations on 80 to 10 meters. Look also for
some 6 and 2 meter SSB activity.

SEYCHELLES - Paddy O'Reilly GW4MAD/S79MAD is active from here on
SSB, CW, RTTY and PacTOR until July or August. He can be found on
40 to 10 meters, including some RTTY activity on the newer bands.

MEXICO - Sacrificios Island in Veracruz State will be activated with the call
sign XF2NVA from June 6 to 8.

--ARRL DX Bulletin number 22, dated 15th May

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday 21st May, being the 3rd Wednesday of
the month. Jim Ayling, VK2KQ, will tell about his experiences in developing
portable gear for a recent WICEN exercise. It is also the Society's AGM.

Doors open at 7:00 pm and the meeting starts at 7:30.

The first Saturday afternoon of each month is project day, so drop in on
June 7th from 1:30 onwards and get involved in some practical work or just
come along and socialise. Project day has proved most useful to a number
of members by helping them fix rigs with faults or just to receive assistance
in the operation of modern rigs.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New
South Head Road, next door to the Rose Bay RSL Club, where a number
of members gather for a meal before the meeting.

--Simon Buxton, VK2EII, Club President

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. lnc WILL BE HELD SPECIAL ON
THE 3RD SUNDAY OF THE MONTH, THAT IS MAY THE 18TH. AT 109
WIGRAM ST. PARRAMATTA 1.00 PM - TODAY IN 2 HOURS TIME!

- A TECHNICAL DISCUSSION WILL BE OF GREAT INTEREST TO

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every
Wednesday Evening from 7:00 pm at the Campbelltown High School,
Chamberlain St. Campbelltown

On Friday 17 May the club will be running a Demonstration on Packet
Radio for the students of the High School. Members please note that the
Packet will be off the air during the day.

Also every Third Tuesday of the Month from 7.30 pm, at the Campbelltown
High School, is the General Meeting night with lectures on popular
subjects.

The proposed lecture agenda is:

May 20: Introduction of the Club's Web Page and a discussion on
Amateur Position Reporting System (APRS) by Daryl VK2TDS

June 17: The Mobile Phone Network by Chris VK2ZCJ

July 15: High Speed Packet

Aug 18: Practical use of a Spectrum Analyser

Sept 16: Fox Hunt Information Night

Oct 21: Home Brew Competition

Nov 18: President Daryl's Slide Night on his USA Trip.

Dec 15: Christmas party

Jan 20: 2 Metre Fox Hunt

--Publicity Officer: Chris VK2ZCJ Pb.: (046) 81 9365 (Home)

WAHROONGA AMATEUR HISTORICAL RADIO ASSOCIATION

Readers of the Sydney Morning Herald might have noticed a small item in
"Column 8", about the Wahroonga Amateur Radio Historical Association. A
replica (shown at the recent WIA Divisional AGM) of the Mercury statue at
Wahroonga will be leaving soon for Wales, in the company of Jo Harris
VK2KAA. The original statue at Wahroonga commemorates the reception
of the first wireless message, direct from the UK, on 22nd September 1918.
Alas, there is nothing in Wales (where the message originated) to mark the
great event, but Jo is setting that right once and for all!

Jo would thank all those who contributed donations towards the cost of the statue, and further donations will of course still be gratefully accepted. The Mercury replica will be dedicated during the second week in July, at Waunfawr [pronounced "wine-fah"] in Wales, where that historic message was transmitted back in 1918.

Also, a Special Event station from Penrhyn Castle in Wales will be active on the 1st weekend in July, and Jo KAA will be there, so if conditions are right, please give her a call!

The Wahroonga Amateur Radio Historical Association's web page is currently being set up (it will be accessible through the NSW radio clubs page on the VK2 Divisional web site). You'll be able to see a photo of the original statue, plus the club's special event QSL cards, and information about the Association.

--Jo Harris VK2KAA

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION.

The Australian Amateur Packet Radio Association, would like to let the members and anyone wishing to join the Association a contact phone number.
Jo VK2KAA 9489 4393.

HORNSBY & DISTRICT ARC. INC.

The next meeting is the Annual General Meeting of the Hornsby & District Amateur Radio Club. taking place, on the 27 May 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station)

Training Classes,
For more information phone, Tony VK2BTL on 9487 3383 or John on 9807 2490.

The Club conducts. a net each Monday night, at 8:00pm on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join In. All are welcome. Listeners set your scanner or receiver to 147.250.

Should you wish to know more about the Club, or its activities, please write to :. H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer.

MANLY-WARRINGAH RADIO SOCIETY

This Wednesday is lecture night at the Manly-Warringah Radio Society, and this month, Tom Hughes VK2HUZ will talk on the subject of boating safety. Tom is a ferry master on Sydney Harbour, and has also been a member of the Royal Volunteer Coastal Patrol for many years, so his talk promises to be most informative.

As usual, doors open at 7:30pm for an 8pm start and visitors are most
welcome to come along.

The Manly-Warringah Radio Society meets every Wednesday night at the
Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with a
business meeting on the second Wednesday, and a lecture on the third
Wednesday of the month.

If you need directions to get to the club, just call in on the 2 metre repeater
VK2RMB on 146.875 MHz; if you're on Internet, you can also find the
club's home page through the WIA VK2 Division's Club Index page.

-- Richard VK2SKY

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE
VHF AND UHF OPERATORS, THE GROUP WAS FORMED TO
PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR
GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL BE NEXT TUESDAY, 20
MAY AT AMATEUR RADIO HOUSE, PARRAMATTA.

THE MEETING WILL BE A SPECIAL LECTURE BY GARRY VK2KYP ON
MODIFYING THE AM-17 TRANSMITTER FOR USE ON TWO METRES.
THE AM-17 IS AN EX-DCA HIGH BAND VHF TRANSMITTER USING A
PAIR OF 4CX250BS AND PROVIDES A SIMPLE WAY OF GETTING TO
THE MAGIC 40OW PEP ON 144 MHZ. QUITE A NUMBER OF AM-17s
ARE ON THE AIR IN SYDNEY, CANBERRA, MELBOURNE AND BRISBANE.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND
OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550MHZ
FM AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

Tea coffee and biscuits are available and Hot dogs some days,
so call in for cupper.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton.

Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every
Friday night all checkins are welcome.

The club conducts classes in radio theory and morse code.
For more information ring (02) 9837 2226 or (02) 9834 1186.

> Jolly good idea. Retest *everyone* on *every* element they originally
> passed. And in addition, let's go back to one-minute error-free code
> exams to insure each person can actually copy at the speed they're
> supposed to.

Since it matters not one iota if anyone can copy Morse at all, let
alone at any particular speed, the concept of making code tests
more frequent and more difficult is absurd.

Obviously, the suggestion to "retest all the olde fartz who threw
away their code keys years ago" is just a device to point out the
absurdity of asserting that the ability to copy code at any particular
speed is "important" or "necessary" ... and to point out the "IGM"
and "dog in the manager" aspects of the practice of code testing.

> Now, why did you *start* this new topic on .misc? Bad boy, Carl.

I don't recall "starting this new topic" Jeff ...

In fact, I HARDLY EVER *start* new topics, I find that in the VAST
majority of cases, I'm simply responding to posts in ongoing threads.

Perhaps you should concentrate more on substance than form
and stop being such an anal-retentive "usenet cop" ...

In any event, take your phony self-righteousness and bugger off ...

> If
> I wasn't replying from an email-only account I'd redirect FUs to

So YOU're one of the beepers who sends all that "FU FU FU ..."
stuff in fast Morse on the bands, huh??? <grin>
(sorry ... only joking but I couldn't resist THAT opening ... I hereby
publicly acknowledge that I don't REALLY believe that Jeff does that)

Source record: 198332

I have bought a LPD radio from ALINCO. The name is EC10.
The low power device has 10mW output power.

Let me know, how to change the output power from 10mW to 50 or 400mW.
Is the frequency after the change the same?

Jochen

> 73's Steven Hershman NS1R

I believe the increasing strength of the dollar is behind this price reduction, as well as increased competition. The dollar is up 30% or so over the last year.

This is very good news if you are buying. Its not very good news if you bought your rig say two years ago, and are trying to sell it now.

Carl R. Stevenson <wa6vse@fast.net> wrote:

>Please also comment on the conversion strategy ...
>Carl - wa6vse
>wa6vse@fast.net

Power limits in accordance with license class are a good thing (as long as there aren't more than two power limits);

Some HF access for all license classes is a good thing;

Maintaining some aspect of code proficiency somewhere in the system is also a good thing; either at the very top for high speed or at the very bottom on a written exam.

But retesting every 5 or 10 years is an extrordinarily bad idea. I upgraded in order to be done with testing. I know what I need to know, from practice. I learn what I need to learn in practice. I don't mind filling out a questionaire about new rules at renewal time, but I intend to be done with VE sessions - unless of course I am the VE.

You also made the comment that the written exams are very easy. Do you not find being a ham radio operator to be likewise? The exam should scale to some extent to the activity - wouldn't you agree?

73,

Jim AC6XG

Uhhh - as long as you keep the RAM powered up, the program won't be
destroyed. I've never done it, but people seem to be (a) feeding the
RAM from an external source during the change -or- (b) do while the
receiver is on. I'm not sure about how wise it is to do as in (b), but
(a) should work. YMMV.
Good luck,

If you're looking for a Windows 95/WindowsNT program to control your Yaesu FT-990 radio, I've decided to offer my MasterControl 990 as shareware. The features are noted on my MasterControl 990 home page at http://prairie.lakes.com/~medcalf/

You'll need an RS-232 to TTL adapter to talk to the FT-990, and one available COM port on your computer (the program supports COM 1 through COM 9). The shareware registration is only $25.00 and I'll be happy to consider all suggestions for improvements from registered users.

Hi, Carl.

Why do you have to be so vitriolic when responding to someone who is, perhaps, less technically inclined than you? I thought Steve's comments were well intended and from his heart. You seem so condescending at times. On the one hand, you'll respond with great diplomacy. Then the next response will be downright spiteful.

Do you dislike those who are pro-coders, or do you disagree with their opinions and actions? I believe you to be a very articulate person. I only wish you would be kinder to those who offer their honest opinions about the status of Amateur Radio, whether it includes preserving the code tests or not.

Best regards,
Lindsay Foster

Here is Matthew's offering complete with line feeds. This is a one time service next time please supply your own line feeds Matthew (is that really how you spell your name?).

In <337D02AA.7CCE@io.com> "Matthew A. Erickson" <kk5dr@io.com> writes:
>
>There is a growing problem in ham radio today, but it's been around for along time. It's has several variations, but has similar origins.
> The first is called "Competitive Compultion Disoder" or CCD, which is usually found in "contesters", & some "dxers". Where in, they are overly competitive in their radio operations, willing to go to extreme lenths to "out do" the other guys. Also, they are compelled to use "any means" nessesary to achieve "supeiority", over other hams. Those who spare no expense to have the most ellaborate station, and the loudest signal on the air, are prime examples of this disoder.
> Next is called "Coversational Defficite Disoder" or CDD, which is found mainly in "contesters", but also is heavliy infested in "dxers". This disorder effects their ability to coverse with other hams, limiting the exchange to little more than , call, first name, and the all important signal report, which is almost allways 59, regardless if it accually is or not. Once these guys have worked every station on earth, CDD often degrades into CCD. Once CCD has run full course, the ham usually becomes "inactive". Some return, many years later, fully recovered, and some never return.
> Please help. These guys feel that there is nothing wrong with them, much like "alcoholics". Through therapy and consuling, we can save them from themselves.
>

What was "vitriolic" ??? If you mean the following:
> Carl R. Stevenson wrote:
> >
> > Your invitation is at least a couple of decades behind the times, as it
> > would seem are most of your attitudes WRT ham radio ...
I was merely expressing what I believe to be a reasonable evaluation
of the lack of current relevance in some of the ideas expressed by the
writer.
(Readers are welcome to refer to the preceeding post and my response,
I've clipped the rather large volume in this response for the sake of
brevity,
since the material in question is readily available to all ...)

> I thought Steve's comments were well intended and from his heart.

Me, too ... but I also thought they were typically out-dated and said so
without ANY name calling or personal insults ... so now you want to
prohibit me from disagreeing with what I perceive to be antiquated and
harmful ideas??? I think not ...

>You seem so condescending at times.

If disagreeing and saying "that's outdated" is condescending, I guess so
..

> On the one hand, you'll respond with great diplomacy.

Wow ... thanks ... I thought I was just someone trying to help drag
ham radio kicking and screaming into the 21st Century in hopes that
it might survive there in spite of itself ...

> Then the next response will be downright spiteful.

I don't believe I was spiteful at all towards the writer in the response to
which
you are objecting ... if the writer thought I was, I appologize, for that
was not
my intent ... but I still think that many of the ideas expressed are
backward

and counter to the best interests and future survival of our service ...

> Do you dislike those who are pro-coders, or do you disagree with their
> opinions and actions?

I clearly disagree almost universally with the majority of their opinions
and
actions ... in some (a very few) cases I dislike them, even though I have
never
met them in person ... I have, though, experienced enough of their
slander, lies,
distortions, and personal attacks (both on myself and others) that I am
confident
that I would have difficulty finding "redeming value" in those few
individuals ...

I recognize that I am sometimes "brash" ... occasionally insulting ... when
I
am intentionally insulting, I am deliberate about it and "make no bones
about
it" ...

> I believe you to be a very articulate person.

Thanks again ...

> I only wish you would be kinder to those who offer their honest opinions
> about the status of Amateur Radio, whether it includes preserving the
> code tests or not.

If you will follow the course of events carefully, I think you will find
that
my first response to a newcomer who says, in effect, "code is better than
sex and we must maintain it at all costs or the entirety of civilization as
we
know it wll go down the tubes" is something like "that's absurd ... because
a, b, c, & d" ... NOT, "you freaking moron" or something to that effect ...

However, when someone has *continually* asserted virtually all of the
ridiculous dogma and outright falsehoods (the entire littany of Morse
Myths)
over and over as if they were indeed factual for the primary purpose of
being
obstinate and trying to confuse unknowledgable newcomers, I object ...
at some point my "call a cretin a cretin" policy is GOING to kick in, but
by
the time it does, I consider it deserved and that the cretin in question
has
more than amply proved the title is deserved ...

Perhaps you believe that's wrong ... I don't ... I grew up in a family
where
my father was one of 12 that spanned enough time that he had brothers

and sisters who were old enough to be his parents ... the generation gap
(and some differences in religious beliefs) generated enough of a schism
that I had aunts and uncles who NEVER ONCE set foot in the house where
I grew up ... my father's feelings were quite clear ... "God gave me my
relatives,
but I can sure as hell pick my own friends." My parents were never
deliberately
rude to anyone without reason and were tolerant of other cultures, races,
and
religions ... as long as someone treated them decently, the courtesy was
ALWAYS
returned. But they also would not "take a bunch of shit" from someone
without
protest, either ... so I think I came by my outwardness honestly ...

Matt,

That is quite clever. I found it most amusing. The strange part is, it looks like the truth staring me in the face. I see what you have said most ever weekend that there is a contest. Fortunately, I do not browse the DX portions of the HF bands, but I am sure what you said is true.

I do not see an end to the present situation on the bands. There would have to be a complete revolution, inside and out, of the FCC and other agencies for that to happen. I can only say, I have lived during the best of times on the ham bands and do wish it would continue, but I am afraid that will not happen.

Good luck and fine writing.....

Testing CW is not to encourage it to flourish. It is an operational tests.
Each mode should have an operational exam (combined with a technical
theoretical, factored together for a combined score), to insure you are
proficient.

>Some of the worst operators on voice bands are people whose callsign
>indicates advanced or extra.

Yeah, so? All these people passed theory exams too.

>People who have passed the CW tests, time out repeaters, say aaahhhh
>to keep the vox from dropping out, and leave no space between
>communications for someone with an emergency to break in.

Would you like a list of callsigns of locals with codeless tech
licenses who do the same thing? All this demonstrates is the need
for an VHF FM operational examination.

>
>>The latest gripe is the militaristic nature of the club name, FISTS.
>
>Well, again, there are fanatics on both sides of the debate.

The original writer obviously knows little about the history of CW
usage. You could often tell who an operator was by listening to the
way s/he sent code -- what his/her "fist" sounded like. This is where
the derivation of the term "fist" came from wrt CW usage.

Hi and thank you for reading.
I purchased a Maggiore reciever R4V and had a TS-32P tone board
installed.
I hooked it up to my repeater controller and the Squelch Burst is
terrible?
even with the squelch fully shut it is still harsh, sounds like "One
Adam 12"
Anyone with the expierence with this problem?

I heard there is a cap by the discriminator somewere that could be
changed?
I have the schematic for this reciever.

Why would non-hams spend large amounts of time and energy developing
stuff for hams to use if they weren't able to use it themselves??? (And
don't
tell me "to make the big bucks" ... that will only get laughs ... ham gear
mfgrs.
have been steadily going out of business for years and years because the
market is so small and the customer so damned cheap ...

> And its
> keeping them out because.....they don't want to
> take the code test? They can't "do" the code? What? This I need an answer
> to. (Yes, a REAL answer)

Because the skilled people we need are too smart and too busy to waste
the relatively huge amounts of time necessary to get "proficient" in Morse
when the have no interest in using it and never will use it ... it's a
waste

and a torture they're not prepared to endure ...

> > 4th, this policy of technological stagnation has already harmed ham

The purpose of ham radio, in the eyes of the regulators (and the reason we
have bands to begin with) is primarily to encourage technical
experimentation
and self-training ... that's what we're not doing NEARLY enough of ... the
vast
majority of today's hams are technically ignorant applianace operators who
waste valuable spectrum playing games and being obnoxious ... period.

MD and others will disput this and try to play all sorts of word games to
try to make it seem otherwise, but the technical and public service aspects
of ham radio are ALL the regulators give a rat's ass about ... they could
carl less than less about contests, etc. in fact if they really observed
what
goes on on our bands closely for a few weeks or months, they'd probably
summarily pull the plug on us without further discussion ...

Nowhere in Part 97 does it say jack about games, contests, etc. ... that's
ALL a perversion of ham radio that was dreampt up by the ARRL ... they have
COMPLETELY devalued and deemphasized what ham radio is *supposed*
to be ...

That's what we need to fix ...

> >(if we don't "get a move on" the FCC will likely decide that we're not
> worth the spectral investment they've made, take our bands back, and

OK, Graham ... I withdraw the sarcasm at the end of my previous post WRT
the well and the welder's goggles ... you're man enough to admit that you
were
wrong in your approach at first (and that approach is what pissed me off
towards
you) and I have to give you credit for taking a better, more open-minded
tack ...

OK?

Mike, that's a F---ing lie and you know it ... I NEVER said that about
myself ...

I did once respond to one of your offensive statements WRT technical
professionals who have stayed out of ham radio because of the code
requirments (where you called them 'lazy" and "Stupid" by saying
"some of *those folks* have forgotten more about radio than the average
ham knows" ...

A note from "The Antique Radio Collector" <<
http://members.aol.com/wrldradio/index.htm >>

Beginning this month, we are happy to announce our affiliation with "Amazon.com " We believe you will find our new book store offers one of the most comprehensive listings of books and tapes relating to the collecting of Antique Radios, Old Time Radio and Amateur Radio, and related subjects offered anywhere, many with discount pricing. Hopefully, we have now found a way to support our website so that we may continue to offer "free classified advertising" to collectors and maintain a site you'll find worth visiting often.

You should also know that all transactions made from the store are handled directly by Amazon.com, through their "Secure Server" service, for your protection over the Internet "and all orders and shipping are processed directly by Amazon Books".

So, when you need a resource book or just feel like reading a good book (or listening to OTR audio tapes), please visit us at:

http://members.aol.com/wrldradio/bookstore/bookstor.html

<< "Amazon.com Associates" list selected books in an editorial context that helps you choose the right books. We encourage you to visit "The Antique Radio Collector" often to see what new books they've selected for you.

<< Thank you for shopping with an "Amazon.com Associate".

<< Sincerely,

<< Jeff Bezos

C L O S E D C I R C U I T A D V I S O R Y

The following is a closed circuit advisory. According to our support fund administrator, Andy Jarema, Newsline is once again in need of funds to continue operation over the summer months. As most of you know, it costs close to $1200 a month to pay our bills. The majority of donations go directly toward paying our monthly phone bills and electronic mail services. There is also the cost of presenting the annual Newsline Young Ham of the Year Award in August. Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air.

The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1031, for release on Friday, May 16th, 1997 to follow.

(*****

The following is a QST

Hamvention '97 opens in Dayton, Ohio. Also, the reason why the long awaited Scarborough Reef DXpedition went QRT after only three days. These stories and more on Newsline report number 1031 coming your way right now.

(*****

HAMVENTION '97

The place is Dayton, Ohio. The event is the 1997 Dayton Hamvention that is opening as this newscast goes to air. Estimates are that upward of 30,000 hams from around the world are in town for Hamvention '97.

There's a lot more happening in Hamvention City than just the Hamvention. There's something for every member of the family. Places to go, things to see, things to do. Dick Miller, N8CBU is the General Chairman of Hamvention '97.

"The usual alternate activities for, years ago it was called ladies activities, it is no longer just for ladies. There is other things. And there again I can't give you a run down of exactly what there are. Anyone that has been here knows there are various crafts and speakers and so forth. That's all held mostly at Meadowdale. Of course the Air force Museum and in past programs we have listed a lot of these. In fact in the flyer it lists a lot of things to do in Dayton like the Air Force Museum" N8CBU

Well that's a wrap from Convention City for this week. More next week.

Newsline has a team of reporters at Hamvention to bring you a full wrap-up next week.

(Via Newsline, Amateur News Weekly)

(*****

THE BS7H STORY

The long awaited BS7H DXpedition to Scarborough Reef was forced shut down early because of international politics. The operation appears to be the innocent victim of an ongoing feud over territorial economic rights between the Peoples Republic of China and the Philippines.

Scarborough Reef is undisputed Chinese territory, but the Philippines claims the shoal is within its 200 mile exclusive economic zone. According to DXpedition spokesman Tim Totten, N4GN, on April 28, just hours after the BS7H ship departed from Guangzhou, the Philippine government announced that three Chinese military ships were spotted in the Spratly Islands. Philippine President Fidel Ramos lodged a diplomatic protest with China and ordered an increased military presence in the area. Although the Spratlys are some 300 miles south of Scarborough Reef, the BS7H crew and the Chinese research team soon found themselves mired in escalating political friction.

On April 30th, the first day BS7H was on the air, two Philippine military reconnaissance jets flew over the reef at low altitude. The next day a Philippine Navy ship arrived at the reef. It was later followed by a

second military vessel. Totten says that Philippine Navy officers visited each of the three BS7H operating sites. In discussions with the hams and the captain of the lead Ocean Bureau ship, the military personnel asserted the Philippines position that Scarborough Reef was within the Philippines economic territory. For their part, the Chinese stated their position that Scarborough Reef is in PRC territory and provides the basis for a 12 nautical mile territorial sea surrounding the reef.

Totten says the Philippine Navy officials seemed satisfied that the DXpedition did not constitute economic activity in the area. But the Navy officers insisted that while it was okay for the Chinese ships to pass through, they could not stop in any one place for a prolonged period of time. Totten says that the Chinese Ocean Bureau captains were unable to reach any agreement with the Philippine Navy officers on this issue. As such, they decided to leave the reef and return to Guangzhou rather than risk escalating tensions. The DXpedition went QRT on May 3 at approximately 06:45 UTC just three days after it got under way.

LETS BUY OUR BANDS

A ham says that its time for the Amateur Radio Service to insure its survival by purchasing spectrum from the FCC. According to a posting on the VHF Reflector by Bob Carpenter W3OTC, the latest FCC spectrum auction was supposed to bring in $1.8 billion to the federal coffers. Instead it pulled only $13.6 million.

Carpenter cites a Washington Post story wherein the FCC blames the poor showing on Congress. The FCC says congress did not give the agency or the industry enough time to prepare for the latest auction.

But the low bids also might be a sign that the market for telecommunications licenses is becoming glutted, some analysts suggest. And Carpenter says that if this is the case then its time for the ARRL or some other ham radio group to start bidding. It's time for hams to place offers on any present and former ham radio spectrum that might be put up for grabs. Bob Carpenter seems to indicate that bidding random small amounts should eliminate any doubt in the multi-national world of telecommunications giants that we hams mean to keep our frequencies for decades to come.

To read the whole story about the low bidding for spectrum, simply point your internet browser to

http://www.washingtonpost.com

Then click on search using the key word FCC.

BERGEN ARA vs ARRL RESTRUCTURING

New Jersey's Bergen Amateur Radio Association will be sending a formal resolution to the American Radio Relay League. This, to ask the national society to slow down and take a closer look at its proposed restructuring of the Amateur Radio Service.

The text of their resolution, voted on at a May 3rd meeting urges the League to postpone any immediate consideration of its already published restructuring proposals. It also asks the ARRL to begin extensive additional study on the various issues and, most importantly, it urges the League to first begin a re-evaluation of the amateur radio mission statement to reflect modern times and conditions.

According to the Hudson Division Loop electronic newsletter, many members of the club believe that the ARRL should once again focus on the basics of protecting and promoting amateur radio along the traditional lines. These being technical orientation and high standards of operating skill.

Club members also expressed considerable sentiment that standards should not be reduced in any way. They note that certain licensing policies have, in their view, been unsuccessful in promoting stable and sound growth.

A formal resolution is in the process of being drafted. The club plans to send it to ARRL Executive Vice President Dave Sumner, K1ZZ, Hudson Division Director Frank Fallon, N2FF, and others. Over 180 club members took part in the meeting that lead to the decision by the Bergen club to take what appears to be a rather hard-line traditionalist stand.

(Via ARRL Hudson Division Loop)

APPLE TAKES EXCEPTION TO LEAGUE'S 5-GHz STAND

Apple Computer does not like a filing by the ARRL opposing Apple's efforts to deploy so-called Unlicensed National Information Infrastructure or UN2 devices in the 5 GHz range.

Earlier this year, the FCC made available 5.15 to 5.35 and 5.725 to 5.825 GHz to these devices under Part 15 of its rules. The spectrum involved includes part of a secondary Amateur Radio allocation. So the ARRL filed comments opposing Apple's requests insofar as they would increase the potential for interference to amateur operations.

Three petitions for reconsideration were filed by various industry groups, but Apple's was the only one that concerned the amateur allocation. Apple said the League's objections reflect the League's general opposition to any shared use of Amateur Radio Service frequencies rather than the presence of any real threat to Amateur Service operations posed by Apple's proposal. Apple went on to say that the ARRL failed to show that non-spread spectrum UN2 transmitters using highly directional antennas pose any greater interference threat to hams than do spread spectrum transmitters using highly directional antennas.

As previously reported the FCC relaxed the restrictions on the use of directional antennas in conjunction with spread spectrum devices on April 3rd. Apple is demanding that the FCC to treat UN2 directional antennas the same way.

(Via ARRL)

(*****

FCC STAFF CHANGES

Some staff changes at the FCC could affect Amateur Radio. First is David E. Horowitz. Horowitz has been appointed Chief of the Private Wireless Division in the FCC's Wireless Telecommunications Bureau. And Lisa M. Higginbotham has been appointed Deputy Chief of Legal of the Private Wireless Division. Also Richard Engelman, N4COP, has been named Chief of the International bureau's Planning and Negotiations Division.

(Via FCC Release)

(*****

PATTY WINS AGAIN

Some other names in the news, starting with Country music entertainer Patty Loveless, KD4WUJ. For the second year in a row, Patty has been named top female vocalist. This, during the annual Academy of Country Music awards on April 23rd. Patty was also the Country Music Association's female vocalist for 1996. She is married to album producer Emory Gordy Jr., W4WRO.

(Via ARRL)

(*****

FOALE ON HAM RADI0

Also, astronaut Mike Foale, KB4UAC, likes ham radio and is telling the world about it. At the recent STS-84 preflight press conference Foale talked about ham radio and his stay aboard the Mir space station.

According to information posted to the AMSAT Bulletin Board by writer Philip Chen, KC4YER, Foale told reporters that he took his amateur radio exam in preparations for spaceflight STS-56. His flight commander was Astronaut Ken Cameron, KB5AWP, who Foale described as pretty serious about ham radio.

Foale says that Cameron encouraged the whole crew to get licensed. He did, and since then he has enjoyed taking part in ham radio activities. Foale says that he is looking forward to using the ham radio on the Mir throughout his stay. He adds that he will to talk to anybody who can speak to him in English or Russian.

(Via AMSAT-NA)

(*****

ANTONIO NEW JOB

And congratulations also to Franklin P. Antonio. He has become Executive Vice President and Chief Technology Officer with Qualcomm in San Diego, California. Antonio is one of the founders of Qualcomm. There he will provide strategic technical guidance and engineering leadership across all of Qualcomm's engineering programs.

Franklin Antonio is also a longtime friend and benefactor of AMSAT. He wrote the satellite program known as InstantTrack and has since contributed all proceeds from it to AMSAT.

GRANVILLE "GRANNY" KLINK JR, W3AFV, SK

A sad note. Legendary radio broadcast engineer Granville "Granny" Klink Jr, W3AFV, of Silver Spring, Maryland, died March 18th. He was 87.

According to Radio World Magazine, Granny Klink spent most of his 61 year engineering career at WTOP in Washington, DC. There he engineered broadcasts for President Franklin D. Roosevelt, Kate Smith, and the early radio sitcom "Amos 'n Andy."

He retired in 1978 but remained a full-time consultant until his death. He is survived by his wife Marion and three sons.

(Via Radio World Magazine)

(*****

INDIANAPOLIS 500 MARATHON

Over 20,000 runners successfully completed the Indianapolis 500 Festivals Mini Marathon thanks to the efforts of Central Indiana Amateur Radio operators. Members of the Marion County RACES organization were stationed around the race course to provide health and welfare communications on the runners.

The international field of runners started the race near Monument Circle. They worked their way around the 13.1 mile course through the streets of Indianapolis, around the famed Indianapolis Motor Speedyways 2.5 mile oval before finishing back downtown.

A professional runner from Kenya won the race in a record time of 1 hour 1 minute and 56 seconds. So, despite cool temperatures and gusty winds, it still turned out to be a successful race for the runners and for amateur radio operators helping the marathon.

(Via Amateur News Weekly)

(*****

ISRAELI LICENSING CHANGES

From overseas, Israel says it has changed its Amateur Radio examination structure from a single exam to separate Morse code and an integrated theory and regulations testing. And an examinee can now take one or both of the parts of the exams, and only the incomplete or failed part need be taken at a future examination date. In the past, if one part was failed, the entire examination had to be re-taken.

Changes also to the Israeli Grade B General license and the VHF-UHF code-free license. There the theory and regulations examinations have been integrated to be the same for both license classes. Now, if an applicant passes the "Technical" class exams and at a later date takes the 12 word per minute code test, he will receive the Grade B license.

Old Grade D license holders wishing to become Grade B's will be forced to take a code test. They will also be required to answer three questions in theory and three more in regulations to complete the new requirements.

(Via IARC)

(*****

AMSAT-UK COLOQUIUM

A reminder once again that the 12th AMSAT-UK Colloquium will be held at Surrey University, Guildford England from July 25th to the 27th. Amsat-UK is inviting authors to submit papers, about amateur radio space and associated activities. Papers will be presented at the Colloquium and will be published in the "Proceedings" of this annual event. Submissions should be sent to G3RWL, via e-mail to:

g3rwl@amsat.org

(Via AMSAT-UK)

RAC TO HELP RUN HAM RADIO IN CANADA

Closer to home, the Canadian Government has told Board members of that nations ham radio society, Radio Amateurs Canada, to be ready to assume more responsibility in regulating ham radio in that nation.

Industry Canada Assistant Deputy Minister Michael Binder has promised to move forward on the joint effort to delegate the administration of the Amateur Radio Service in Canada. This, to a nongovernmental service company affiliated with the national society.

The effort was underway when it was halted earlier this year awaiting the formation of a long term funding method by Industry Canada. Binder now says that he will phase in as many aspects of the plan as possible over the next several years.

EAS FAILURE

Before we leave, we have to tell you about a government mandated test that, well, went a bit wacky. On April 22nd, television and radio stations in three states mistakenly received an alert from the government's new Emergency Activation System or EAS. It was an alert that put many people on edge according to the Federal Emergency Management Agency.

A scheduled test transmission was intended to assist one radio station in Chicago check out its new EAS equipment. Instead an activation message went out to Florida, Louisiana and Ohio. Automatic equipment then relayed the alert. This lead to misleading broadcasts on the affected radio and television stations.

What did it look like and sound like? Television stations tied to the system automatically sent a message to their viewers. It went crawling across the screen against a stark red background and said -- quote -- "The Emergency Action Notification Network has issued an emergency action notification for The United States beginning at 3:54 p.m. and ending at 4:09 p.m." As that was happening, a male voice could be heard on radio and television audio saying "Can you hear me? ... Testing ... Testing ... Testing."

At the beginning of 1997 the government replaced the aging Emergency Broadcast System with the new computerized Emergency Activation System. This is the same system that ham radio has been invited to take part in but that the Amateur community has not yet adopted. Mainly because hams have yet to figure a way to make the new alert system work with their repeaters and other relay stations.

But broadcasters have been complaining ever since the plans implementation. They say that both the hardware and software need a lot of work before the EAS system can be deemed reliable. Some say that it reminds them of the old joke about the computerized pilotless airplane where nothing can go wrong. Go wrong. Go wrong. Go wrong...

>I think the new flea market driving restrictions are the most stupid and
>ill-considered thing the Hamvention has done in years.

I don't know if it's been past policy or not, but just this year I discovered that flea market spaces can't be purchased at the gate. Rather than telling the planet what I think of this policy and the nazi control freaks who created it, I'll simply say that this is even stupider then the driving restrictions (but not by much). Wonder what the pinhead in charge of excreting these policies will produce next year.

> If I were you I would go to a small CB repair shop that also sells used
> radios. They usually have a fair share of amps in the back room.

I must disagree.

CB amps are usually not a good choice for 10 meter amateur operation.
They have too much gain, and unless you modify the amp or reduce the
output of your transceiver, you will overdrive the amp, generating a
lot of splatter, and maybe even blowing it up. They also are often
not of very good quality, with poorly controlled bias circuits which
result in distortion and excessive harmonic content.

Good quality 10 meter amps are more expensive than CB amps, and are
not in very high demand, since most hams don't think they need more
power. They are not popular with CBers, since they don't produce
full power with the 3 Watts or so that the average CB puts out, so
the back room of a CB shop IS NOT a likely place to find one.

> as there aren't more than two power limits);

Only 2 classes, only 2 power limits ... "entry-level" (say 50-250 ???)
and "standard" (up to 1500 WPEP)

> Some HF access for all license classes is a good thing;

The idea is FULL HF access all bands, all modes for both
classes (power limit is the difference, since it's justifiable ...
sub-band ghettos are arbitrary and "balkanize" our community)

> Maintaining some aspect of code proficiency somewhere in the system is
> also a good thing; either at the very top for high speed or at the very
> bottom on a written exam.

5 wpm until ITU treaty changes for HF access, then Morse is
COMPLETELY voluntary and optional ... no ban on use, though.

> But retesting every 5 or 10 years is an extrordinarily bad idea. I
> upgraded in order to be done with testing. I know what I need to know,
> from practice. I learn what I need to learn in practice.

Sorry ... I can't agree here ... maybe you do, but FAR too many have
not learned what they need to know, either initially, or by stagnating
40 years ago and leaning nothing since ... I firmly believe that some
retesting for technical currency is important to maintain our standards
of technical competence ... don't blow off the whole proposal on this
single issue ... I'm clearly not the sole decision-maker here, but I will
fight for retesting ...

> I don't mind
> filling out a questionaire about new rules at renewal time, but I intend
> to be done with VE sessions - unless of course I am the VE.

The retest does not necessarily have to be a full-blown test like one
would take to be licensed initially ... it could be a "spot check" on

new technology of the past 10 years ... I'm just looking for something
to preclude fossilization in place ...

> You also made the comment that the written exams are very easy. Do you
> not find being a ham radio operator to be likewise? The exam should
> scale to some extent to the activity - wouldn't you agree?

Being an amateur carries certain responsibilities and obligations which
require
a certain level of technical knowledge and skill ... everyone does not need
to
be an EE, but they should at least be reasonable lower-level technician
material.
The present exams do not assure that minimal necessary level of knowledge
and
skill, as witnessed by the know-nothings in our ranks ... some of whom are
extras and haven't a clue, even about such basic things as Ohm's Law and
how
to cut a diplole to resonance ... we cannot permit that sort of thing to
continue.

Software can easily verify that the answers are all sufficiently different
..
these sorts of problems can be forseen in virtually all cases if a
competent
software design team implements the program after a careful design effort.

> question pool is going to be used for years

Why? ... I see no reason why the question pool could not be updated on
a quarterly basis ... or at least every 6 months ... it would be mostly a
question of adding new questions on new developments ... older stuff
need not be purged until it's rather dated ...

> and the new mode must gain
> some degree of acceptance in the ham community before including it

I didn't mean to imply that it was a "no-effort, no-brainer" ... but it's
not exactly like the writing of the Constitution, either ...

> There are quite a lot of things to watch for in each question:
>
> * Is the question appropriate for the license class (since this
> question pool was for entry level, a lot of questions had to be
> scrapped).

A lot of the questions from the existing Novice -> General pools would
apply to the "entry-level" here ... and the Adanced and Extra questions
to the "standard" class ... everything doesn't have to be completely done
from scratch, just revised, regrouped, and checked ... then automated
into test generation software ...

> * What previous things had to be learned to understand the question.
> For example, the number of questions requiring decibels were
> minimized, since this would have required to teach about logarithms,
> since logarithms are not taught early in the school.

I see no need to create a test that very small children can pass ...
I would not propose a minimum age limit, like for driver's licenses,
but I see no need to dumb things down to the point where grade
school children can memorize without understanding and become
licensed ...

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #216 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 23-May:
-
1. Hams to Swap Places in Latest Atlantis/Mir Docking Mission
2. AMSAT Offers Formal Comments on FCC Spread Spectrum Docket
3. ITU Celebrates World Telecommunication Day with 4U1ITU
4. ARRL Convention to be Combined with Dayton Hamvention in 2000
5. Weekly Propagation Forecast
6. Conference in Geneva Takes Next Steps Toward WRC-97
7. W1AW Installs New Satellite Station, Preparing for Phase 3-D
8. Press Reports Indicate Pentium II Processor Could Be Flawed
9. "The RAIN Dial-up" from Chicago
10. Special Event Station Calendar
11. 100th Anniversary of Discovery of the Electron
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. VE8RCS Station "Alert" Shut Down at Arctic Outpost
14. "Tower Climbing Safety" - with Greg Stoddard, KF9MP
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net.
-
*** SPECIAL NOTE ***
Edition #216 of "This Week in Amateur Radio" will be pre-empted by
programming from the Dayton Hamvention. The service WILL be carried
on satellite Monday, May 19, at 9:00 PM (EDT). Affiliates carrying
the program via internet audio will not be affected.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
```

center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz. Program audio is on the 6.2 MHz analog subcarrier. On the Internet, audio is available each Sunday in 8-bit .WAV file format, sampled at 11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

Neither do I like that very small children memorize the question pool
and pass the exam without understanding anything. IMHO, the 14 to 16
years old should have enough background information to _understand_
the phenomenon asked about in the exam. Over here, children are
required to go to school until they are 16 and quite a lot of the
previous generations left school at that age, although this is not
common any more. We can safely assume that a large part of those
attending the test sessions have a similar background in math and
physics as 14 to 16 years old have. We are just fooling ourselves if
we use questions that need background information that a large part of
a generation does not have to _understand_ the subject. Using such
questions just promotes memorizing the question pool (instead of
trying to understand the phenomenon). For the entry level license, I
see no need for more elaborate math than addition, subtraction,
multiplication, division and maybe square root.

For a higher license more is certainly required.

For instance the HAREC (Harmonised Amateur Radio Examination
Certificate) recommendation (CEPT T/R 61-02) defines the minimum
background knowledge you should have. In HAREC you can get a new fixed
full privilege (HAREC A) or full (high power) over 30 MHz (HAREC B)
license in the country you have moved to, based on the license from
your country of origin, without taking any more test. Quite a lot of
European countries have adopted this recommendation. Note that is a
different recommendation from CEPT T/R 61-01, which is intended for
travelers (less than 3 month).

Anyway, this recommendation specifies things that the candidate should know:

a) Where quantities are referred to, candidate should know the units in which these quantities are expressed, as well as the generally used multiples and sub-multiples of these units.

b) Candidates must be familiar with compounds of symbols.

c) Candidates must know the following mathematical concepts and operations:

- adding, subtracting, multiplying and dividing;
- fractions;
- power of ten, exponentials;
- squaring;
- square roots;
- inverse values;
- interpolation of linear and non-linear graphs.

d) Candidates must be familiar with the formulae used in this syllabus and be able to transpose them.

After this the recommendation goes on for 20 pages to define what (radio)technical and regulatory knowledge the candidate should have.

IMO. it is a good idea to define the minimum talents a candidate should have before even starting to make a question pool. Note that HAREC A/B is the requirement for a full power pan-European licensing. There was also an attempt to define an easier novice/entry level specification (HAREC C/D), but this attempt was aborted, when it became clear that the requirements and privileges for the entry level license varied greatly from country to country, so the entry level license is not interchangeable from country to country in Europe.

C L O S E D C I R C U I T A D V I S O R Y

The following advisory is not for transmission over amateur radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1029 for release on Friday, May 2nd, 1997 to follow.

(****

The following is a QST

Ohio hams win an exemption to proposed state wide antenna structure controls and the post flood clean up continues in the Great Plains. This story and more on an extended Newsline report number 1029 coming your way right now:

(*****

OHIO HAMS WIN ANTENNA EXEMPTION

Hams in Ohio are on the winning side of a new proposed state wide plan to regulate antenna structures.

The mid Ohio Regional Planning Commission, a group of representatives from utility companies, telecommunications providers, and government officials have prepared a document entitled, "Model wireless telecommunications ordinands". This model document will serve as a guide for all of Ohios local governments to establish local ordinances pertaining to cellular towers.

But, what is significant to amateur radio is just that. Amateur radio is totally missing from this document. In essence, amateur radio is deemed completely separate from the general realm of wireless telecommunications facilities. In this case, amateur towers are not considered towers, but they are classified as amateur radio operators equipment.

A lot of the success in gaining an exclusion for ham radio goes to Paul Krug, N2NS who is the ARRL Ohio State Government Liaison. The success of Ohio hams in gaining a blanket exemption to the proposed tower controls proves that advance planning really pays off.

(*****

HAMS CONTINUE FLOOD AID

Ham radio continues in what observers call a critical role in the wake of major flooding along the Red River that overtook the cities of Grand Forks, North Dakota, and East Grand Forks, Minnesota. Most area residents, an estimated 50,000 people were evacuated into surrounding towns and emergency shelters. The Salvation Army has been assisting at many of the temporary camps and shelters, providing food and other necessities, and Amateur Radio has been maintaining most of the important communication links. Steve Carbno, KB0GLV is the ARES Emergency Coordinator for Cass County North Dakota.

"We dovetailed with everybody from emergency management to the Coast Guard to the Salvation Army. We have provided additional communications support for the Red Cross. And it has been a real good meld." KB0GLV

North Dakota Section Manager Bill Kurtti, WC0M, agrees. He says that hams are providing backup communication for the various agencies involved in the flood-relief effort. Kurtti said the biggest communication obstacle hams are trying to help overcome is to coordinate communication among the various relief agencies that don't share one another's radio frequencies. He says that several Amateur Radio clubs, the American Red Cross, the Salvation Army, the National Guard and FEMA have been active in dealing with the emergency in North Dakota.

(*****

ARRL SENDS RELIEF REPEATER

The ARRL has become directly involved in relief efforts. Last week it dispatched its emergency 2 meter repeater to the Forx Amateur Radio Club in Grand Forks, North Dakota. It is serving as a backup to the single repeater still in operation in the area. This is the same gear loaned to the U.S. Virgin Islands after a hurricane took out all amateur repeaters on

St. Thomas in 1995.

(*****

HAMS LIKE ARRL ENFORCEMENT PROPOSAL

Last week, we told you about the ARRL's efforts to step up enforcement of serious rules violations in the amateur radio service. The League wants radio amateurs to be able to present evidence to an FCC Administrative Law Judge for possible enforcement action.

If the FCC ever had a reputation for being tough on rule breakers, it seems to be mostly a thing of the past. Among radio amateurs anxious to see more rules enforcement, the Commissions image today is that of a paper tiger. At the April 19th BirmingHAMFest amateur radio convention, hams say the proposal to revamp enforcement procedures is long overdue:

"I believe it would be a very good idea because, 1) the FCC is overworked. They don't have enough field people to really take care of any problems that crop up. I think that it would be a wonderful opportunity for the amateurs radio operators in general to really show that we can police our selves and actually do a lot better job."

"They are cutting back so much on the monitoring stations. The FCC is cutting back on personnel, field offices and all that. I don't think they can do the job anymore. Especially on VHF where you got to be fairly close or UHF. Fairly close to who is breaking the law or send somebody in, which they are not going to do in most cases. Cause they have bigger fish to fry."

Under the Leagues proposal, members of ARRL's amateur auxiliary would be able to present evidence for Commission review.

"I think it is a good idea. If volunteer examiners took the load of the FCC for examinations, and I think we need enforcement, and I think it would be a marvelous idea. Setup similar to what the volunteer examiners were."

Some amateurs support the proposal since they feel the Commission is too light in cases it does prosecute:

"I think it would be a really good idea. The FCC hasn't been enforcing very much. And there have been many times that there was interference and the fines that they did incur were just minimum. That not much impact was made on these amateur offenders."

There is concern about hams with personal grudges becoming involved in the enforcement process:

"I'm not sure if it is the best way to do it. I'm afraid a personal vendettas, neighborhood vigilante type of an effect."

"I'd like to see it. I think it would be a great idea as long as we police ourselves pretty well and make sure we don't have any people with vendettas who are bringing charges and that sort of thing. But I'm sure

somewhere in the process where you could weed those guys out."

The Leagues proposal to give amateurs a more prominent role in prosecuting offenders has strong support for one main reason: the feeling many radio amateurs have that the FCC is not doing its job.

Hams nationwide seem to favor the Leagues idea of privatizing enforcement of the Amateur Radio Service Rules. It will be interesting to see what the FCC eventually has to say.

(*****

PART 15 DIRECTIONAL ANTENNAS

The FCC has announced that it will allow high gain antennas to be used for unlicensed transmitters operating in the 2400 and 5800 MHZ Part 15 allocations. These bands are shared with the Amateur Radio Service.

Ed Mitchell, KF7VY is editor of Ham Radio On-Line Magazine. He reports that under terms of the Report and Order in ET Docket 96-8, released April 10, 1997 very high gain antennas may be deployed at 2400 and 5800 MHZ. Certain transmitter power reduction restrictions apply at 2400 MHZ but unlimited gain systems may be installed at 5800 MHZ.

These systems will enable high speed Internet access using unlicensed systems. You can expect to see these systems deployed rapidly as soon as 1998 to provide non-commercial and commercial services on these frequencies.

The complete story, including the Report and Order, is now available on-line at:

http://www.hamradio-online.com

or at the FCC site at:

http://www.fcc.gov

MISSING HAM

A ham radio operator who is the mother of two young boys is missing and your help is needed to find her.

April Smith, KE6CNK, disappeared on Wednesday, April 9th and has not been seen or heard from since. April is the wife of Dave Smith, KE6CNL. He tells Newsline what he knows about her disappearance.

"And then on the 9th of April she went to work. She got up and kissed me good morning at 5:00 AM, said ''I love you''. I kissed her and said ''I love you''. She said I will see you tonight. The youngest boy, who is 9 years old, has a little bit of a handicap got up, gave her a hug an kissed her. She said she would see him tonight, ''I'll see you tonight'' is exactly what see said. Then the youngest boy got hurt in school and I

called and left her a page. She called him up and left a message ''we are busy at work'', see works for the hospital and said ''I'll talk to you later''. And that is the last we have heard of her." KE6CNL

April Smith is described as a white female, age 31, weighing about 135 pounds and 5 foot 6 inches tall. Her hair is normally brown but it was died blonde at the time she disappeared. She did not have her hand held radio with her when she dropped from sight but was wearing a pager. So far she has not returned any pages to made her. Dave Smith Says that he and her sons want her to come home:

"Just come home. The boys need you. They don't know what to do. They are not sleeping, they are having problems in school. I'm trying to get them help. They need you!" KE6CNL

If you know the where abouts of April Smith, KE6CNK, please call Dave Smith anytime night or day. His telephone number is (818) 763-9036. You can also reach Dave by e-mail to:

band98@juno.com

Or you can call the North East Division of the Los Angeles Police Department at (213) 485-2563 and ask to speak with Sargent Doranian.

N6NHG TO BE SENTENCED IN JUNE

A Los Angeles federal judge has set a June 16th sentencing date for computer hacker Kevin David Mitnick, N6NHG. As previously reported, Mitnick was arrested in February 1995 in Raleigh, North Carolina. He consented to moving the case to his home state of California. There he pleaded guilty to using 15 stolen cellular phone numbers to dial into computer databases in a case in North Carolina.

SISTER ALVERNA RETIRES

Sister Alverna O'Laughlin, WA0SGJ, has retired from the Courage HANDI-HAM System effective last Monday, April 28. Sister Alverna has worked at Courage Center for 16 years, serving as Educational Services Coordinator in the HANDI-HAM Program. Newsline Reporter Linda Reader, N7HVF, is one of the many who has been the recipient of Sister Alverna's loving good will:

"When I had an aneurysm, I was a technician I had to relearn the morse code. She convinced me to come to the Handi-Hams Camp where I finally got my general licence and then later I obtained my extra license. And it was because of her that I was able to do this. So I have great respect for Sister Alverna and I will miss her." N7HVF

Last Spring, Sister Alverna was in a car accident while on her way to the ARRL Midwest Division Convention. She sustained serious injuries to

her leg and ankle and spent the past year recovering. Even so, she still maintained a part-time schedule at HANDI-HAMS. She indicates that her retirement will time to concentrate on getting well again, and she hopes to be walking this summer.

QRP-ARCI ANNOUNCES FOUR DAYS IN MAY EVENT

The QRP Amateur Radio Club International holds its second annual Four Days In May QRP symposium Thursday, May 15th. QRP presentations, workshops and demonstrations will be the focus of the full day of activities to be held at the Days Inn Dayton South in Dayton, Ohio. For more information, contact Bob Gobrick, VO1DRB, by e-mail to:

70466.1405@compuserve.com

(*****

BAKERSFIELD CONVENTION

The Bakersfield Amateur Radio Association will host the 4th annual and new ARRL San Jocqueem Valley Section Convention the weekend of May 15th through the 18th. The outing takes place at Costerisan Lake South of Bakersfield, California. For more information contact George Miller, KC6KGH at (805) 323-3691 or visit their website at:

http://members.aol.com/robertj966/bara.html

(*****

NO MORE COMPLEX WEBSITES

By the way, this will be the last week that we will include the location of long and complex world wide websites in our newscasts. We have received listener complaints that they are impossible to copy down even when repeated several times. We will continue to announce simple websites such as "www.artbell.com" and simple e-mail addresses like "newsline@ix.netcom.com." But after this newscast the reporting of complex web addresses is a thing of the past.

(*****

RAC PREPARING WRC-97 POSITION PAPER

On the international scene the Board of Directors of Radio Amateurs of Canada has established a working group to prepare a position paper for WRC-97. The paper, which is expected to be in final form by mid May, will set out the concerns of Canadian radio amateurs with respect to the usage of frequencies above 30 MHZ. The working group is currently seeking input from Canadian amateurs which will demonstrate the utilization of our bands, particularly those above 450 MHZ. The paper will be submitted to Industry Canada and to the Canadian Preparatory Committee for WRC 97.

(*****

NEW SPANISH HAM RADIO PROGRAM

And Radio Mexico International has begun a new Spanish language program aimed at sparking interest in Amateur Radio and shortwave listening. Estacion DX began airing on April 2 at 02:00 UTC over Radio Mexico International, on 9.705 kHz. The programs host is Yuri Bilbatua Ferrer, XE1NVX. Ferrer is a member of the board of directors of the Federacion Mexicana de Radio Experimentadores, and is in charge of their media relations.

(*****

ISRAELI GIVES NOVICES MORE

Israeli Novice Class hams have been granted new operating privileges. Ten meters has been added, becoming the novices' third HF band. 28.000 through 28.225 MHZ is the permitted transmitting spectrum. Their Fifteen meter allotment has been expanded to 21.000 through 21.200 MHZ. Forty meters remains 7.000 through 7.050 MHZ. As well as Morse transmission on these frequencies, digital modes are now permitted.

(*****

CDV TO AWARD $1000 SCHOLARSHIP

Closer to home, word that the Chaverim of the Delaware Valley is once again sponsoring the Ed Ludin, K2UK, Memorial Scholarship. This scholarship program is open to secondary school students in academic, technical and graduate school programs. Applicants must hold a valid United States licensed Amateur Radio operators license and be of the Jewish faith. Award will be made on the basis of academic achievement and financial need.

Those wishing to file can receive an official application by writing to the:

Chaverim of the Delaware Valley
c/o Sylvia Sobel, W3SLF
9375 Hoff Street
Philadelphia, Pennsylvania
19914

All completed applications must be post-market no later than June 15th to be eligible for this years competition.

(*****

DX

In DX, the BS7H 1997 DXpedition to Scarborough Reef is still on target to hit the airwaves about the time this newscast goes to air. The U.S. members of the operating team are N7NG, W6EU and W6RGG. BS7H will be on the air for approximately 7 days and had a scheduled to start-up date of April 30th. The DXpedition will operate SSB and CW on 160 through 6 meters, RTTY on 20 and 15 meters and various modes on the Russian RS

satellites. DXers in Japan should QSL via JA1BK. All other cards go to W4FRU. For additional information contact Tim Totten, N4GN, by e-mail to:

n4gn@iglou.com

Also, EI8OOL is a special event station on the air through the end of June. This, to celebrate the 800th anniversary of the charter of Limerick City, Ireland. The station is operating on all HF bands on CW and SSB, plus VHF, including 6 meters.

And advance news of a DXpedition to Annobon, also known as Pagalu Island, in Equatorial Guinea. Annobon is a very rare DXCC country and a large multi-national group plans activity from the 20th of May for one week.

(*****

YOUNG HAM OF THE YEAR '97 NOMINATIONS OPEN

A reminder that the nominating period for the 1997 Young Ham of the Year Award closes on June 30th. That's just a bit under two months from now.

To qualify, a nominee must be 18 or younger, be an FCC licensed radio amateur and reside in the continental United States. More information on the award and an official nominating form is available at the Newsline home page on the world wide web. Our address there is:

http://rrnet.com/rrra/newsline

Award information and a nominating form also is available by sending a self-addressed stamped envelope to the:

1997 Young Ham of the Year Award c/o Newsline 28197 Robin Ave.
Santa Clarita, California 91350

HAM RADIO A FAMILY AFFAIR

How about another all ham radio family. Emily Maytan, AC2V reports that her eleven year old granddaughter Nicole Mancuso, KC2BHV, as earned her Technician License. She is the daughter of Karen, WD2AHI and Ron, KA2RAN, Mancuso. Nicole's grandparents are Emily, AC2V, and Paul, AC2T, Maytan.

Emily Maytan says that there are now 3 generations of hams in the family. Nicole's mother Karen was but 14 years old when she became a Technician. This also makes Nicole the youngest member of the Yonkers Amateur Radio Club.

C L O S E D C I R C U I T A D V I S O R Y

The following advisory is not for transmission over amateur radio. As spring and summer approach, we are again forced to ask our listeners for their financial support. According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the end of June. And that does not take into account our fixed annual expense in presenting the yearly Young Ham of the Year Award to some worthy young radio amateur in mid August. Our administrative costs in that area alone is in excess of a $1000. Add that to the average twelve hundred dollars a month to keep Newsline in operation and it is easy to see that another crisis is less than sixty days away.

And that's what we are trying to avoid by coming to you now. Please help by contributing what you can, as soon as you can. The mailing address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1030 for release on to follow.

(*****

The following is a QST

Militias' take to the ham bands in search of cheap communications. Also, the Department of Energy abandons its EMF health risk study and television station brings controversy to ham radio. These stories and more on Newsline Report number 1030 coming your way right now.

(*****

MILITIAS AND HAM RADIO

Just before his surrender, the self professed head of the breakaway Republic of Texas put out a call for militia members from across the nation to come to his aid. News reports said that his plea went out over shortwave radio but now we learn that it was actually ham radio that was used. And in this special report, Newslines' Alan Kaul, W6RCL tells us that militias nationwide are listening and talking on our bands:

When the Texas Rangers searched Richard McLaren's trailer house at the so-called Embassy of the Republic of Texas, they undoubtedly found the radio gear which enabled him to transmit on 2 meter, FM, simplex. McLaren's transmissions were recorded by Austin Anderson, N5YNE the night of May 2nd and the morning of May 3. Hams living in the area told journalists, that McLaren used his 2 meter gear a lot.

McLaren's use of Amateur Radio is a good example of how paramilitary organizations often break federal radio regulations and then justify it as "necessary in the fight for freedom."

Here are some apparent violations monitored in the McLaren case:

1) A portion of the transmissions were apparently coded and not "plain-language," as required by the FCC.

2) They probably also constituted broadcasting, that is one-way transmissions.

3) And they involved a phony distress call, he was heard to say "mayday, mayday."

4) Making matters worse, McLaren apparently ignored domestic licensing requirements. Since he claimed he was exempt from having to obey Texas and U.S. law, why should he bother with radio regulations?

Interestingly enough though, when the Texas Rangers tried to get him to surrender, they encouraged him to speak to them on the 'Ham Radio' according to briefing officer Mike Cox of the Texas Department of Public Safety.

And there is ample information to suggest that McLaren's group wasn't the first to use and misuse Amateur Radio.

Remember the Freeman Standoff in Montana? When federal authorities arrived and set up their monitoring equipment, the spectrum analyzers indicated where the Freemen were transmitting. But when officers tuned to the frequencies on scanners, they not only heard voice transmissions, they also heard the squeals of packet bursts.

And there are reports that other militia and paramilitary organizations are using packet as well. In many cases the operators of such stations are probably licensed Amateurs, after all, most people outside the Amateur community don't know what packet is. As for FM voice transmissions, many

police officers believe Amateur Radio may be used universally, wherever militias operate. And even though the control operator for such transmissions might be a licensed Amateur Radio operator, such communications still might be in violation of Part 97.

Napoleon said an army moves on its stomach, but how well an army moves today, may depend more on its communications. And obviously Amateur Radio has provided a simple solution for militias and paramilitary that need lightweight, reliable and portable equipment. Let's face it, the low power 49 MHz personal communicators sold by K-Mart and other stores don't have much range, they aren't very secure and can be QRM-ed by portable phones and baby monitors. For obvious reasons, CB radio doesn't cut it either. And cellular telephones are too easily monitored, even though that's illegal without a court order. Cellphones have one other bad habit, they leave a paper trail, the phone bill shows whom you called and when. Telephone records constitute a big portion of the evidence in the Oklahoma City/Murrah Federal Building bombing trial now underway in Denver. What self-respecting militia would want that record of calls left behind?

Ah, but for the militias, Amateur Radio has several distinct advantages. First, the equipment is easy to get, the videotapes shot inside McLaren's compound showed what appeared to be Radio Shack 2 meter gear. It's inexpensive, it's capable of simplex, duplex or repeater operations, and you can buy it in almost any medium sized town in America. Ham Radio's biggest drawback is it's not a secure form of communications, but there are ways to make it more secure, as the FBI found out the hard way in Montana, packet keeps scanner listeners from decoding messages unless they have a TNC, a computer and the right software. And even if militias used voice simplex, and changed frequencies at a prearranged time, they could make it tougher to be heard. And importantly, buying Amateur equipment doesn't raise suspicion. As fewer stores require proof-of-licensing, you're beginning to see it sold in more places, truck stops for one, and at duty free airport stores for another.

If you apply the theory of the FCC licensing criteria to the militias, then what they probably should have is a license to operate on their own frequencies. The problem with that is: could you imagine the Michigan Militia applying to the FCC for a radio license and a frequency allocation? Besides, you can't really call them public service like police, fire or the utility company, but no one should call them "Hams" either, I believe "Hams" are licensed for two-way communications with other Amateurs, they're not licensed to coordinate military maneuvers on 2 Meters.

That's the facts about militias using our ham bands. What follows is my opinion. I can't imagine the FCC would ever issue the militias a license and assign frequencies, but unless the FCC does, Amateur frequencies will continue to be under assault.

Years ago, I think it was the IARU which sponsored something called "intruder watch", encouraging Amateurs around the world to report apparent intrusions into the HF Ham Bands by foreign broadcasters. Perhaps its time we resurrected "intruder watch" with a special emphasis on monitoring the

VHF and UHF bands, to keep track of the domestic threat to the frequencies of Amateur Radio.

Special thanks to Austin Anderson, N5YNE, Don Smith, KC5UP, and Don Hale, KA6ILV, all on location in Texas, for their help in the preparation of this report.

More on the militia movement and its invasion of ham radio in future Newsline reports.

(Newsline exclusive report prepared and reported by Alan Kaul, W6RCL)

(*****

DOE SAYS NO MORE EMI STUDY

The Department of Energy is pulling out of research on the possible health risks of electromagnetic fields. The agency's decision follows a report last fall by the National Academy of Sciences that found no conclusive evidence of adverse health effects from these fields.

The Department of Energy's decision to abandon further study was made in a March 7th letter to the National Institute of Environmental Health Sciences. Writing in the journal "Science", Keith Florig, a scientific policy expert at Carnegie Mellon University says that research on EMF risks has not been very productive. As such, science really isn't up to the task of answering the question.

The decision by the Department of Energy to pull the plug on EMF research also ends another program. This one is a two decade study of possible EMF related biological mechanisms.

(Via Science)

(*****

SKYWARN CONTROVERSY

Amateur Radio is in the middle of growing controversy in Alabama. Huntsville television station WAAY says it will launch its own severe weather spotter network using Amateur Radio Operators and frequencies. Some hams consider the stations plans to be a violation of FCC rules.

The Huntsville television market, like others, is competitive. One station is always trying to outdo the other. WAAY has what it touts as the most powerful Doppler radar in north Alabamas Tennessee Valley. But in March, Channel 31 announced formation of its own amateur radio storm spotter network. Local hams started getting letters encouraging them to join. The invitations were signed by station employee Lynda Osmer, WB4TJE. The plan is not going over well with radio amateurs. They believe the stations network would be a violation of FCC rules prohibiting commercial use of amateur frequencies.

"I feel like the television station is trying to seize this opportunity to test the waters. In other words, if nobody is going to slap them on the

hand. Then this is a good opportunity to seize a service that the public is listening to." KN4CI

Rex Free, KN4CI, is a founder and driving force behind North Alabama Skywarn. That's a 10 county organized network of amateur spotters assisting National Weather Service and emergency management personnel. Free says Channel 31's plans put amateurs in a difficult position. The station provides space for amateur repeaters on its tower. And its General Manager, M.D. Smith, is a ham himself, WA4DXP.

Other amateurs involved in emergency communications question the stations motives.

"I don't believe they really have public service as their ultimate goal." KL7Q

Tom Moore, KL7Q, is Alabamas ARRL Section Manager.

"Number one, I think its not in the best interest of the amateur radio service to be involved with any commercial organization. Secondly I don't believe that they really have the interest of the public in mind in comparison to the ratings that they hope to achieve." KL7Q

So far, Channel 31's spotter network hasn't been heard on the air. Again, North Alabama Skywarns Rex Free:

"Its odd, David, in that every intent has been made on its net, but no one has heard the net on yet. So no violation has been made. I refer it to an example that says I'm going to see if I can get away with robbing this bank. I tell everybody else, but I never rob the bank." KN4CI

In her letter to hams, Lynda Osmer says reports from the stations network will be summarized for on-air use as a public service. Again, Section Manager Tom Moore:

"If they're doin' it as a public service, then why haven't they contacted the NA and the National Weather Service to coordinate with them?" KL7Q

How many hams are actually joining the new network is not clear, station manager M. D. Smith is not returning calls. In the meantime, Rex Free says North Alabama Skywarn will continue operations as usual.

In a March 18th letter to the Alabama Section Emergency Coordinator, Station Manager M.D. Smith says he is fully aware of FCC rules and regulations. Smith says the station does not intend to violate any current rules now in effect from the FCC.

WISCONSIN HAMS ASKED TO PREPARE FOR POWER BLACKOUTS

Hams groups in Wisconsin have been asked to prepare to help out in the event of possible power outages this spring and summer. This, because a significant portion of the region's power generating capacity is out of

commission.

In late April the Wisconsin Public Service Commission briefed state agencies of the possibility of power blackouts. This includes local outages and rolling blackouts that could adversely affect telephone service as well as police and other public safety agencies. And this is where ham radio was called in.

Alan Wohlford, a communications officer with Wisconsin Emergency Management, issued the invitation. He asked Amateur Radio clubs, ARES and RACES groups to meet with local emergency management and public safety officials. His agency wants them to coordinate to supply any assistance that might be needed if normal communication are disrupted.

In the event of power or telephone outages, these organized ham radio groups are being asked to be alert for emergency traffic. Mobile operators were being asked to placard their vehicles to identify themselves as hams who can provide emergency communication. Individual hams not allied to clubs, RACES or ARES were not asked to participate.

GREAT PLAINS HAM RELIEF OPERATIONS

Conflicting reports coming from Minnesota and North Dakota concerning the extent of ham radio flood relief efforts along the now receding Red River. The ARRL Letter reports that as flood waters recede, hams in the flood-stricken area are taking a breather. It reports that some hams are taking advantage of a lull in the action to be with their families and to check on their own flood damaged homes and property. This, even though roads in and out of a few areas remain impassable.

But commercial news services paint a different story. One report says that as of Monday, May 5th, everyone involved in relief efforts were working around the clock to restore normal lines of communications. In the meantime, most emergency services were still relying on hams and CB operators for routine operations. Also, the Salvation Army is making heavy use of HF and 2 meters. The main use is communicating with its canteens and relief stations.

But other reports say that the Salvation Army ham radio operation at a local Air Force Base had been moved to a K-Mart parking lot in Grand Forks. The same source also indicates that there is no longer need for additional emergency and backup. This, because telephone service has been restored in many areas.

ARRL: NO TO VANITY FEE INCREASE

In ARRL related news, the League is saying no to increased fees for vanity call signs. Last month, the FCC proposed effectively raising the fee for vanity call sign from $30 to $50 for a 10 year license term.

Now, the ARRL is asking the Commission to postpone the higher fee until after all four vanity call sign gates have been opened. In comments filed April 23, the ARRL told the FCC that it does not object to the fee but says that it wants all hams to have an opportunity to request a specific call sign under the current fee schedule.

DOWNEY, CA CLUB CONTRIBUTES TO ARRL FREQUENCY DEFENSE FUND

The ARRL is on the receiving end of a gift from a California ham radio organization. The Downey Amateur Radio Club has presented a check for $500 to the ARRL Fund for the Defense of Amateur Radio Frequencies. The donation was made in early March. Accepting the check was Southwestern Division Director Fried Heyn, WA6WZO. Director Heyn expressed the League's gratitude to the Downey club for its contribution to their Washington, DC efforts.

THE HAM RADIO OPEN TOWN MEETING

The 1997 Dayton Hamvention gets underway next Friday, May 16th. One of the highlights will be the first ever live to the Internet radio show about ham radio. Its called the Ham Radio Open Town Meeting. Its host is Ham Radio and More's Len Winkler, KB7LPW:

"I think you are going to find some heated debate, obviously the topics are going to spur some peoples emotions. We will try to calm it down so that it is not too much. We will all act like adults. But, we want to entertain also, we want to create a little entertainment. To have a little fun. But, absolutely talk about four of the most heated, most important topics that are now facing amateur radio." KB7LPW

The Ham Radio Open Town Meeting will air live from the TAPR audio website in Real Audio Format. You can hear it next Saturday, May 17th from 3 to 5 PM Eastern Daylight time. Just take your browser to:

http://www.tapr.org/newsline/townmeeting.html

INDONESIAN PIRATES ON 10

On the International scene, what appear to be unlicensed stations operating from Indonesia continue to be a big problem for users of the ten

meter band in Australia and New Zealand. Over the last few years the pirates have moved onto the 28 and 29 MHZ bands in large numbers. Often they are the only signals that can be heard on 10 meters in Australia and New Zealand.

The unlicensed operators are believed to be the equivalent of Indonesian CB'ers who are trying to escape the chaos of 11 meters. They can be found every 10 kHz or so right up into the 29 MHZ satellite band. Most operate using high power FM or AM with directional antennas.

Australian hams say that the Indonesian pirates have no regard for amateur operators, In fact they now play a new game of jamming ham radio transmissions as a new kind of sport. Complaints to the Indonesian government are being ignored.

IARU AND PATU TO WORK MORE CLOSELY

The International Amateur Radio Union for Region One and the Pan African Telecommunications Union have signed a memorandum of understanding. One that will lead to a closer relationship and cooperation in the development of telecommunications expertise and the Amateur Radio service on the African continent.

The memorandum provides for regular exchange of information and documentation to enhance the development of ham radio in Africa. It also supports PATU's training and development objectives.

The Pan African Telecommunications Union was established in 1977 by the Organization of African Unity as a specialized agency. Its broad objectives include building and maintaining cooperation among member states to improve, expand, develop and use the telecommunication networks and services. Its also tasked with promoting the establishment of multinational training institutes in Africa.

MOSESON STEPS DOWN

Some names in the news. CQ VHF Magazine editor Rich Moseson, W2VU, has stepped down as the ARRL's Northern New Jersey Section Manager. He is replaced by Roy Edwards, KB2LUO, who was elected earlier this year. Moseson cited other demands on his time as the reason for his stepping down from the post after eight years of service.

(Via VHF Reflector)

(*****

FCC's COMPETITION CHIEF RETIRES

Also, FCC Competition Division Chief James Olson. He's leaving the agency to join a Washington area law firm. Olson was appointed by Commission Chairman Reed Hundt to serve as a liaison between the agency and the Department of Justice during the initial implementation of the Telecommunications Act rewrite of 1996. He also served as a liaison between the Department of Justice and the FCC's Mass Media Bureau on media merger issues. No replacement for James Olson has been named.

(Via ARRL)

(*****

APT LEAVING NASA

Astronaut ham Jay Apt, N5QWL, says that he is leaving NASA to accept the directorship of the Carnegie Museum of Natural History in Pittsburgh, Pennsylvania. The Carnegie is one of the largest natural history museums in the country, with a permanent staff of 85. Apt expects to move to Pittsburgh this summer.

(Via AMSAT-NA BBS, ARRL)

(*****

RS-16 SPURS

Spurious emissions on the 70 cm band are from the Russian RS-16 ham radio satellite. This has been confirmed by Pat Gowen, G3IOR, who says the spurs show up when the 435.504 MHZ beacon is active.

(Via G3IOR/AMSAT-G)

DX

In DX, the BS7A Sacarborough Reef operation ended a few days early with no explanation given. The operators are all OK and reportedly on their way back home.

And the upcoming June 26th to July 3rd CY9AA DXpedition needs help from someone active on the various Pac-Sats and who lives in Western Europe. This person would be responsible for forwarding info once or twice daily directly to G3WOS via e-mail for posting on the DXpeditions web site. Any volunteer will be required to give us a solid 8 day commitment to insure a daily update. Prospective volunteers should contact Mike Smith via e-mail to:

ve9aa@brunnet.net

Also the 2 meter KH6HME Hawaiian beacon on Mona Loa volcano has been monitored 3000 miles away in San Diego. Area hams began hearing it on May 2nd at 23:50 UTC with a steady 559 signal.

(Via DX Sources)

(*****

NEW DX MAILER

Lastly, Bernie McClenny, W3UR, has begun publishing The Daily DXer.
This is an Internet HF DX bulletin sent out Monday through Friday. DX
related news such as DXpedition announcements and reports, press releases
or general DX information are welcome via e-mail at:

bernie.mcclenny@mail.wdn.com

Or fax Bernie McClenny at (301) 854-5105.

Carl R. Stevenson <wa6vse@fast.net> wrote:

>This last prophesy came substantially true in the years that passed ...
>far too many appliance ops, fewer builders and tinkerers ... VERY bad
>for ham radio ...

I think it is only natural that ham radio evolve into an appliance operator radio service -- this is what dumbed-down theory examinations give you. Plus, the inherent complications associated with radio design these days (volumes of reference material, special subscriptions and so on) mean it is impractical for the "average" ham to really do any serious design work. Most of the serious design people I know already work in the industry as an electrical engineer so they have access to volumes of reference material and testing material that "Joe Average Ham" doesn't have.

The future of amateur radio is going to be in appliance operation. There will always be some technically-oriented people, but they are a minority. The majority will be communicators. They will be enhancing international goodwill through long-distance communications. They will be providing emergency communications at local disaster sites. They will be doing the public service work. The extent of their knowledge will be "how do I set up a remote base station", and how to solder a PL259 on a piece of coax.

>Not so ... all that infrastructure is vulnerable in disasters ... hams can
>AND DO still contribute ... but virually ZERO part of it is in or depends
>in any way on Morse ...

Morse is primarily a long-distance, interactive communication mode. You don't generally use morse for an across-town contact. (Sort of like using a hammer when you need a wrench). Short-distance communications are usually FM, and long-distance traffic passing is usually packet. You use the correct tool for what you are attempting to accomplish.

>You make the classical misake of the technically backward (or even of
>those who ar otherwise technically savy but fanatical about Morse) ... to
>assume tha "just because it's 'digital' means it uses a keyboard" ...
>digital systems can be used to transmit voice, pictures, and many other forms
>of information besides just keyboarded text ...

Digital systems today in amateur radio = a keyboard. That's life.

Yes, digital can do other things.... None of which are applicable in amateur radio today.

>Can you maintain reliable links day in and day out from say Atlanta to
>say Indianapolis and Denver with a MAXIMUM power output of 10 milliwatts???

Wow. So, these digital modes also create propagation where none exists?
I didn't realize that digital was the solution to sunspots. I'm a convert!

>Some of us still do ... far too few, but some ... and we're the ones who
>are pushing for modernization and change ...

Tell me, exactly where is the "Carl Stevenson Amateur Radio Line" of
equipment? Please enumerate exactly all your >technical< contributions
to the amateur radio service over the past 20 years. Knowing you are
full of hot air, Carl, I know you have >NO< technical innovations
contributed to the hobby (although you'll create some lame excuse like
'my professional work contributes'). All this lip-service you give to
"pushing for modernization" is meaningless -- the true reason is you
simply don't want to take a code test, and you want special
dipensation because you think you're better than everyone else.

> pushing to make ham radio more
>attractive to the technical professionals and other folks who have the
>skill and inclination to build, experiment and help us meet our chartered
>purposes.

Yeah, yeah, yeah. Yada yada yada. Open a circa 1980's QST and read the
letters or op-ed pages. No-code advocates were claiming the *SAME*
thing back then about a codeless VHF license. Didn't work then. Won't
work now.

>You'r talking about "CB with an attitude" now ... the service always has
>been *supposed to be* focused on the technical side ...

Wrong, wrong, wrong. 60% of 97.1 deals specifically with
>OPERATING<. Only 40% of 97.1 talks about technical pursuits. Thus,
by the FCC's own definition, we are a service of operators.

>In order to provide what the public wants and needs, we need to
>modernize ... any EMS official will laugh you out of town if you
>suggest that Morse will meet his/her needs ...

Since Morse is rarely used on VHF (other than weak signal work,
which wouldn't be emergency comms anyway) someone proposing Morse
as a solution would be laughed at because it is readily apparent
s/he doesn't have >ANY< clue about emergency comms.

>they all want and
>NEED tactical voice with VHF/UHF FM and wider area using SSB on HF

2 Meters for local voice work. 6 meters for regional communications.
HF for out-of-area health and welfare traffic.

>That's illustrative of the major problems that face ham radio today ...
>stagnation, apathy, and the "it's just a hobby" idea promoted by
>the competitive games folks ...

Goes to show you how little you really know about amateur radio.
The "competitive games" folks don't consider contests a 'hobby'.
Serious contesters are there to >win<, plain and simple, the same
way each participant at the Kentucky Derby is there to win.

3194. DL0ART/am Balloon Launch on Sun 18-May-1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-17 00:00:00 UTC
From: Oliver Welp <welp@muenster.de>
Message-ID: <337D7356.7650@muenster.de>
Source record: 198236
Cross-posted to: nl.radio.amateur,es.rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.space,uk.radio.amateur

PLEASE FEEL FREE TO SPREAD THIS INFO IN ANY APPROPRIATE WAY!

-----5th Launch of DL0ART/am-----

The Nienberge Amateur Radio Group (NW Germany) plans another balloon
launch on sunday, 05-18-97.

This is our fifth flight and will be the first one carrying a
transponder. 40 kHz of the 70 cm band will be translated to 2 m. All
hams are invited to use this facility.

Still, the launch is not 100 per cent for sure. There is a 50 % chance
of rain / thunderstorms, which would keep us from going.

Final testing will be on Sat 05-17-97, 13:00 UTC.

This will be the last launch of DL0ART/am.

Planned ARTOB launch 05-18-97:

Launch: # 5
Launch date: 05-18-97 (Sunday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D & F2A)
(2) 2nd beacon: 144.987 MHz (F1A)
(3) Transponder: (J3E & A1A preferred)
Uplink: 432.570 MHz \ +/-
Downlink: 144.470 MHz / 20 kHz
+ beacon on 144.470 (A1A)
(4) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 100 mW
(3) 2.5 W

Antennas: (1) groundplane
(2) turnstile
(3) big wheel - one for 70 cm, one for 2 m
(4) 70 cm: groundplane / 10 m: lamda/2

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater Osnabrueck, DB0CO (R 75). Reports are welcome, please call DL3YBQ. Or send QSL to DL9QJ via bureau, via PR or via Internet (preferred). Each report will be confirmed by a special QSL card of the balloon.

DL0ART/am on the Web:
http://buene.muenster.de/darc/artob/hombale.htm

Any suggestion or response is always welcome!
Best 73,
Oliver

Hello all...

I'm new to Ham radio (taking my test next month) and am looking for a radio to buy. I need something that is fairly cheap, i.e. less than $500. However, I'm also limited by the fact that I live in an apartment complex and can not have any external antennas. I would greatly appreciate any advise that you have time to give.

Thanks,

Nathan

I'm using win3.1 on this PC I'm using to read and write these usenews newsgroups. This machine is behaving reasonably well, and don't want to "risk" the problems I might get if I upgrade to win95. I also have a win32s subdirectory in windows with wahtever Photoshop 3.04 wanted to install to run properly.

Of course, my next machine will be win95 (or whatever Microsoft puts out next, win98?) and would be a "clean slate" to load programs into.

> I don't know exactly what you are looking for, but I choose HT's based on
> performance, not just features. Later....

With all due respect, to say something is "better" is subject to what's
important to the person. _BOTH_ units are very good.

If smaller size and dual bands are critical to a person, then the Yaesu
FT-50RD is the better unit.

However, if low cost and an easy to operate unit are important to a person,
then the Radio Shack HTX-202 is ideal for that person.

My friend Bill (W6DIV) owns a Yaesu FT-50RD. He likes the small size and
dual band ability.

I own a Radio Shack HTX-202. It may not be small or sexey, but it sure
does what I want it to do.

I guess that when someone asks, "What's the "best" HT to buy?" It's a matter
of what factors are critical to them:

Cost
Single or Dual Band
Size & Weight of the unit
. . .

> ^^^^^^

Although I love my HTX 202, out-of-band receive is the reason I'm looking for
a new primary HT. Weather changes can be a great thing to hear about
when you travel. Other than that though, I can' complain about the RS HT.

I assume you're talking about low Earth orbiiters, for which you don't need
a lot of gain. If so:

I've done fine with the RS-10/11 bird using almost anything -- a dipole,
a groundplane vertical, a J-pole and about 20 watts output. But, if you
want to do it "right", check out quadrifilar helixes or turnstile-reflector
arrays. These are actually directional antennas, but their beamwidths are
very broad. They are circularly polarized, which may not be optimum for
all satellites, but should do OK.

For more information, see the Weather Satellite Handbook or the Satellite
Experimenter's Handbook, or e-mail me direct.

"Anti-American crap???" What the hell are you talking about, you jerk?
I'm
as patriotic as the next guy ... as far as your puking problem goes, I
have a
suggestion: "stop looking in the mirror" ... that should help.

> > by the way, what the fuck do I know,

Not much from the looks of it ... unless you're referring to your
vocabulary
of obscene words ... you sound EXACTLY like the lids on the 80m and 20m
"sewer" frequencies ... I think we should get a "burp print" on you ...

> > I've only been a licencesed amateur since 1957,

all that tells me (by itself) is that you've had plenty of time to become
senile and completely outdated in technology ... I see NO evidence
to the contrary in your post ...

> > when the tests were REAL....at the FCC

Hey, bud ... I took and passed the "real" general written AT THE FCC
OFFICE, too ... along with the commercial license ... so what?

> > licensed "General Class" for approx. 39 years, wanna re- fucken test
> > me

would absolutely love to ...

> > .....current code speed approx. 35wpm full comprehension at that speed
on
> > receive, sending...not that anyone gives a shit, average, accurate
fastest

> > about 42 or 43 wpm.....re-test???, no problem for me assholes.....

I could care less if you can beep AT ALL ... let alone how fast ... *I* would
like to see you tested on something relevant, like modern technology and
theory ... that's where I'm betting you'd fail miserably (given a *good*
test ...
you might get lucky with the current, watered-down multiple guess stuff)

> > The
> > only reason that I haven't bothered with advanced/extra is because I
won't
> > be a party to the sham testing that our hobby has embraced!!

Yeah, right ... I can tell right away from your attitude and the fact that
you brag so much about your beeping prowess (to the exclusion of all
else) that you're a real technological wiz ... and Mr. & Mrs. Clinton are
both *completely* honest and above suspicion, too, right???

[snipped the brag list WRT contest awards, DXCC endorsements and all
the typical macho gamer crap]
> >I guess I just
> > don't qualify for your "Club" except as one of those "Sociapaths" that
> > slipped through your facist screening.............

Franky, you ACT and SOUND *exactly like* one of those sociopaths ...
as far as whether you're qualified to be licensed at your level or not,
I haven't seen anything to make me think so so far ... all of your
emphasis is on beeping and competitive games and spouting dirty
words ...

> > Well fuck you all and the
> > white horses that you didn't ride in on......the horses have better
sense.....

You're not *my* type ... as far as the horses go, you're right however ...
they
do have better sense (than you) ... at least, left on their own, they
will limit
their sexual activities to their own species ... which, by your own
comments,
may not be the case with you ...

> > Have A Happy Day
> > W3HWE

Send me a copy of your license, marked CANCELLED by the FCC, and I will ...

3219. Broadcast radio interference help

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-18 00:00:00 UTC
From: vidgames@netcom.com
Message-ID: <vidgamesEAEEqv.1JL@netcom.com>
Source record: 198111

I'm currently experiencing a lot of broadcast radio interference on one phone line in my house. It's a long one, using a 25' cord from a jack in the next room. I got an snap-on iron ring from an electronics store, but it came with no instructions and it's been a while since I studied inductor theory. After putting it on, I'm still getting a good amount of radio coming through (which is really dropping down my modem speed on that line), so I'm wondering about a few things:

* Should I make small loops or big loops out of the phone line to clip into the iron ring?

* Should I do more loops or fewer loops of the phone line?

* Any other advice, either with this device or in combination with another item?

Thanks in advance...

Hi all, and thanks for reading.

I am looking for shareware or reasonably priced Windows compatible software which will work with the MFJ-1214PC computer interface. I am pleased with the hardware, but the MFJ software leaves a lot to be desired. I'm sure others have run into this situation, and have come up with a solution.

Any suggestions or sources would be greatly appreciated.

Thanks,

Cecil is actually one of the nicest folks I've ever broken bread (or
spicy Thai food) with. I suspect Cecil and I would agree that smallpox
testing has a much actual relevance to amateur radio today as the
Morse exams, too.

>Thanks for any info de Dave, K9XK.

You have seen there are many out there still using W3.1 (3.10, 3.11).
Most W3.1 users have internet access and 16Mb or more. Companies like
Georgia Pacific are still heavy 3.1, too.

Most propagation, antenna modeling, and the like are still DOS. Same
for the major logging programs. I'll bet 80% of the packet computers
are still DOS.

But please don't confuse W3.1 with completely DOS boxes. DOS boxes
are usually 4MB XMS or less (50% are 640KB machines). W3.1 are 16Mb
or 32MB usually. The reason W95 is so strong is you can't get a new
PC with anything but W95. One place charges $99 to load W3.11

Hope this helps

Seems to me that it is discriminatory to use CW as a filter to keep people
who want to use voice on HF off of HF bands....

Codeless techs can't use the technology they develop on the VHF+ bands?

>The purpose of ham radio, in the eyes of the regulators (and the reason we
>have bands to begin with) is primarily to encourage technical experimentation
>and self-training ...

You might want to re-read 97.1. Only 40% of 97.1 deals with technical
matters. 60% of 97.1 deals with communications-related issues.

>MD and others will disput this and try to play all sorts of word games to
>try to make it seem otherwise, but the technical and public service aspects
>of ham radio are ALL the regulators

Technical != public service. Knowing how to build a radio does >not< make
you an effective emergency traffic handler. These are two entirely
different skill sets. The latter is by far more important than the former,
even though you would never admit it. It only takes a few people to
design something technically, whereas it takes hundreds or thousands to
adopt it and use it efficiently. The interaction that public safety
officials will have with hams is strictly on the communications end --
how well they handle emergency traffic -- not on how well they can
build a radio.

> guy!
>
> K4XA
> Graham

IMHO, we need an act of Congress that would allow the FCC to
charge reasonable fees for ham licenses AND not have to dump those
fees into the federal general fund slush fund never to be seen again.
If the FCC could keep ham fees in a separate fund, dedicated to
ham enforcement, they could hire a few field engineers and put them
on the worst cases ... a few solid prosecutions with seizure of the
offending ham's equipment, some serious jail time, and heavy fines
and I'll bet a lot of the sociopaths would "get religion." Those who
didn't would percolate to the top of the list sooner or later and get
busted.

I would happily pay $100/year under these conditions ... now before
folks start bitching and whining about how "that's too much" consider
this. It's about the cost of two evenings out, consisting of dinner for
two with a drink or two for each person at a middle-of-the-road sort
of restaurant ... or a day at Disneyland (probably less than that) ...
or whatever ... my point is for a year it's cheap ...

Anone unwilling to support the service in this way doesn't deserve
to remain licensed, IMHO ... if they can't afford this, they can't afford

radios, etc. either ... so I would maintain that cheapskates should
either pay up or get out ...

Transatlantic 144 MHz Beacon project

How would you like to take part in one of the most exciting and challenging new experiments in VHF DXing this decade? All it needs is time, money, blood, sweat and tears.

The VHF Committee of the Radio Society of Great Britain is working on a project to set up a high power 144 MHz beacon beaming west across the Atlantic from the UK. The idea is to investigate transatlantic VHF propagation, and to provide a tool to those amateurs making an attempt on the Brendan Trophy.

We have already received offers of sponsorship, in the form of equipment and mast space, from several companies.

We would like to hear from any individuals or groups in North America who would be interested in joining in with this experiment. We need enthusiastic amateurs with access to well sited locations near the Atlantic coast. Two sorts of participation are envisaged:

1) Full-time monitor receivers on the beacon frequency.

2) A similar high power beacon (or beacons, possibly time-multiplexed) beaming east across the Atlantic towards Europe.

The beacon frequencies and schedules will be publicised so that all stations on both sides of the Atlantic can join in by listening on an ad-hoc basis.

The project leaders in the UK are Mike Adcock (GW8CMU) and John Wilson (G3UUT).

We are also interested in hearing from UK and other Eu stations who would like to join in the experiment. The ultimate dream is a string of high powered beacons on each side of the Atlantic, probably working time-multiplexed on the same frequency, with corresponding monitor receivers on each side. Then when the propagation strikes - as it surely will - we will know.

If you are interested in taking part please contact Mike (GW8CMU@aol.com), or you can just reply to this message and I will forward.

Who knows? Your call sign could go down in history!

73, John, GM4ANB

Codeless techs are systematically excluded from what even coded hams
readily admit is "mainstream ham radio" ... many refuse to participate at
all as "second-class citizens" relegated to the radio equivalent of "the back
of the bus."

> >The purpose of ham radio, in the eyes of the regulators (and the reason we
> >have bands to begin with) is primarily to encourage technical
experimentation
> >and self-training ...
>
> You might want to re-read 97.1. Only 40% of 97.1 deals with technical

You might want to see the scarecrow from the Wizard of Oz and see
if you can borrow a brain ... your assertion is crap and you know it ...
you assume erroneously that every one of a set of sentences is of
equal imporance in the eyes of the regulators and carries equal weight.

Since your sig seems to emphasize the importance of firearms in your
personal lifestyle, I will try to explain this in terms which may actually
be capable of penetrating that thick skull of yours, Mike ...

Let's say that I have several guns ... ranging from a BB gun, to a .22, to a
30-06, to a Weatherby .458 magnum elephant gun, to a 75 mm recoilless
rifle ... would you consider them equally "important" in terms of the damage
I could do to you, were I to shoot you in the chest with each of them???

If I were to say "Mike, I'm going to shoot you with *one* of these guns, but
you get to choose which one," would you say "I don't care, it doesn't matter
to me, so you go ahead and use whichever one you like." ???

Just like the BB gun would do the least damage (and the larger caliber,
more powerful weapons would do more), the parts of 97.1 are NOT of equal
importance. To assert otherwise is like saying that the .458 magnum and
the BB gun would harm you equally ... ridiculous ...

> >MD and others will disput this and try to play all sorts of word games to
> >try to make it seem otherwise, but the technical and public service aspects
> >of ham radio are ALL the regulators
>
> Technical != public service. Knowing how to build a radio does >not< make
> you an effective emergency traffic handler. These are two entirely
> different skill sets.

I agree 100% with the assertion that "technical != public service" in the
most basic sense ... however, the blanket statement you make above is
not *entirely* all-encompassingly accurate in the following senses ...

1) it presumes that an "effective traffic handler" is one with a
well-practiced
set of manual skills that are "necessary to handle traffic effectively"
(this could include proficiency in typing messages into a digital message
transmission system on a keyboard, an alternative that would be far
faster and more effective than manual Morse)

2) it ignores the fact that one can build advanced communications systems
that can handle far more traffic far more effectively and accurately than Morse
and do so under conditions where Morse would be completely inoperative.
(IOW, the more advanced system is demonstrably better at meeting the
operational needs of the user)

3) it also ignores the fact that without the technical skill to build, install,
and maintain (or at a minimum install and maintain) systems capable of
meeting such needs, all the clerical skills associated with "being an
effective traffic handler" in the ancient sense to which you refer are USELESS.

4) Finally ... your definition of "public service" is rather narrow (but that's
understandable since it's been inherently constrained by the narrowness
of your mind) and ignores the fact that the goals of self-education, developing
a pool of "electronics experts", and adavncing the SOTA in radio communications
are *also* activities that can be demonstrated to have "public service" or
"public
interest" value ... IOW, the public in general benefits from such activities
..

> The latter is by far more important than the former,
> even though you would never admit it.

Of course I won't ... because your assertion is false ... you don't like or
want to be bothered with the technical side, so you seek to construct
a distorted world view where the importance of what you don't like is
artificially de-emphasized ... because that suits your agenda, not because
it's real.

> It only takes a few people to
> design something technically, whereas it takes hundreds or thousands to
> adopt it and use it efficiently.

The point that eludes you is that those hundreds/thousands need to have a
reasonable level of technical knowledge in order to be capable of adopting

and using it effectively ... otherwise, they're too ignorant to be able to install,
adjust, and operate it properly and effectively, and they may end up doing more harm than good ...

Just because you're the poster child *and* "Jerry Lewis" of technical ignorance
all rolled into one person doesn't mean it's a worthwhile cause Mike ...

Lindsay,

I agree that the published question pool with exact asnwers is a BAD
idea and causes problems .... however, there are other, more insidious
problems ... the foremost of which IMHO is the existence of a mindset
(such as evidenced and promoted by MD and others, including the ARRL)
that de-emphasizes the importance and purpose of the technical side
in favor of beeping, competitive games, and the like ... this has had very
serious harmful effects on the ARS over the past several decades.

We need to reverse this trend and get back to what we're supposed to
be, not some perverted shadow of our past glory created in the minds
of some macho gamers ...

there is a very good company called cadex which produces good
commercial chargers, however they are also relately expensive.
Another is called vencom technologies. theirs is also good but
requires an external computer.

Why don't we make it 10,000 questions, so no one can pass and become
a new ham. That way the government will be able to auction off the ham
bands when the old remaining hams die off.

Ham radio is supposed to be a fun hobby for young and old. not a
torture test to see who the 'one' smart person is in the country who
can pass the exam.

First off ... I believe the number off pool question for the novice and
tech writtens (combined) is more like 900, not 550.

> Don't be so sure... I've known people who have memorized the entire bible.
> Word-for-word. That's much more than the equivalent of 550 test questions.

You've known "people", as in "more than one person", that have memorized
the entire bible...word for word? I find it hard to believe you know
even one person that has done this. A savant perhaps?

> And what about people who perform live theater? They have to memorize the
> entire script. And I'm sure there are other examples of memorization that far
> surpass that.

But they work at it. As far as I am concerned, if someone memorized
900+ questions and the correct answers to the written exams I figure
they must have learned something in the process. If they didn't learn a
thing I would wonder what their motivation was for doing all that
memorizing.

I would also assume that these people in general cause you no more harm
on the air than any other operators.

Lame Glen, really lame. We are talking about a hobby, not a career. Repeat after me: career = income, hobby = fun. Lots of people have a job that's no fun. Only a masochist would have a hobby that's no fun. Do you have a hobby that's no fun? Why do you want someone else to have a hobby that's no fun?

> It's merely a matter of a few weeks
> or months of practice and most anyone can get on HF.

Or "merely" years and years of failure to get to 13wpm. Then the indignity of a medical waiver when there's absolutely nothing wrong with the person. IMO, Just another form of hazing/discrimination to make some inferior folk feel superior to someone who is, in reality, superior to them in all ways except wetware modeming. IMO, one way to achieve superiority is to tear the other person down and that's exactly what the CW testing requirement does.

I have four GE commercial radio speakers. They are the common white ones, with the grey rear casing, and the grey strip at the bottom that says "GENERAL ELECTRIC" in white font. I need the matching mounting brackets for these speakers, hopefully someone has a few of these laying around for me... If so, let me know, and I'll make it worth your while, we can work out a deal. Email replies only, thanks.

Again, I would like to point out the flaws in this statement.

1) Anyone UNWILLING to learn code IS NOT being discriminated against. They have CHOSEN not to participate.

2) There is a system in place to grant a waiver to anyone UNABLE to learn code for some medical or physical reason.

Therefore: Neither of the above mentioned cases can be in any way defined as discrimination. The Canadians are wrong.

Larry ... the real question is why should this completely
competent individual have to go "hat in hand, begging" to
Cecil to access the spectrum???

I believe that this indicvidual is one of the ones who Cecil
has refered to as being (at least) as technically competent
and qualified as is Cecil (maybe even moreso in the RF
area, since Cecil says that he's a digital logic designer
by profession) ...

Why in the world should such an individual have to beg
for help from someone just because that someone can
beep????

Can you not see the total stupidity of such a situation???

You are driving along and somehow your car runs off the road and down
a hill. You are hurt and can't make it back up to the road. Using
your ham radio knowledge, you quickly build a spark gap transmitter
from the car's ignition system. You send out a detailed distress
message in Morse code by touching two wires together. Help quickly
arrives and you are saved.

Hi Mike, Morse code ability, like most human traits, falls under a bell-shaped curve, just like height. Can you dunk a basketball? All it requires is DOING WHAT IT TAKES! And if you can dunk a basketball, can you get into MENSA? All it requires if DOING WHAT IT TAKES! Get it? Or should I continue?

Hi Lee, one neat use is if you can't establish a SSB contact on schedule, you can drop back to CW on the same frequency and set up a new schedule, or tell the other ham to QSY to an AMTOR frequency, or tell the other ham to QSY to a frequency normally used for CW - the list is almost endless. Used for the above purpose alone, CW is worth learning. It is exactly the right tool for certain situations. Of course, if you don't have a certain tool, you won't get to use it and you may never know how useful it can be.

I am betting that when the negativism caused by the threat of force from the feds is removed, more hams will be free to enjoy the positive benefits of CW.

Use the controls to the right of the phone jack.

For SSB or AM use the MIC gain control.
For CW use the CARrier level control.

It's all in the manual.

Cecil:

Why would he be prohibited from putting these designs on the air at
your station, with you as control op?

I hope this was tongue in cheek. I have never heard of a situation where someone actually depended on this mode of communication to overcome a temporary or permanent physical disability. For tempororary disability, stories seem to confuse the "one for yes, two for no" system, or perhaps the prisoner's tap code, with morse code. For permanent disability, current technology is able to provide digital text displays, voice synthesizing vocoders, and other tools for disabled people.

Sure. Lots of folks work on the space program, for instance, and have
no chance of getting into space. It's merely a matter of a few weeks
or months of practice and most anyone can get on HF.

Hi fellow 690 owner,

This is a repeat of a previous posting, there were no replies to the first request for help!!!!

Thanks for taking the time to read this message, and if you are able to help me, please take the time to do so, I will acknowledge all replies.

Close to where I live, a new 6Mtr. repeater has just started up....GB3RR

I have the desire to work the repeater, but have an aging FT690r, and the repeater requires a CTCSS tone at 71.9 Hz.

Okay, so I have a CTCSS board, and fitted it to the rig. It works!!, but where does the tone need to be injected to the TX chain?? If you have worked on this job, I would be very pleased if you would share the information with me.

Also just one niggling doubt in my mind....my freq. counter can only go to 1Hz resolution, and I have set up the tone to just "flicker" between 71 & 72 Hz, how accurately does the tone need to be set?

I shall look forward to receiving, your replies to my plea for help, and also to getting the rig working on the repeater.

If you are outside the UK and want info. re British 6Mtr. repeaters, feel free to E-mail me for details.

73 for now,

de Chris G6KBC

Source record: 198072
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

I have for sale a "hard leather" HT case that will ONLY fit the yaesu FT-50, as that is the ONLY radio it is molded for. Fits my Yaesu perfectly with 5W packs with batt. clip off, I'm told it also fits with 2W type packs, but with the beltclips on the packs. I'm unsure how it fits those high-cap. oddly shaped batts. It's a two part unit, one buckles onto your belt with snaps, and other part goes on the HT and swivels onto your belt. Turn 180 degress to take on/off. Very similar to commercial type D swivel cases. It has never been used, I ended up with an extra by accident and only need one. I bought it for $30+S/H from R&L electronics, I'll part with it for $20 shipped USPS (and only with USPS MO PREPAID). NOTE: This IS NOT the type of case that Yaesu sells with their HT's (ie thin flimsy leather with clear plastic keycover). This is a commercial type case, possibly designed for the Vertex commercial radio, but fits the FT-50 as well (since they are the same chasis). Email reply to purchase and/or ask questions. Thanks.

>
> It has almost universally been accepted that some of the math on the
> higher license class examinations requires a degree of schooling one
> normally does not obtain until they are in their teens (phase angles,
> etc.)

Your argument about math has nothing to do with what I said ... I
said that limiting the entry-level license to those under 18 makes no
sense ... (why discriminate against older folks?)

I have also said that I object to "dumbing down" the tests to the
point where small children without the ability or educational
background to undrstand the material can pass the test by
memorizing answers to questions they don't understand ...
(but that's how you brag that you got *your* license, right Mike?)

{snipped MD's incessant regurgitation of his ridiculous proposal
to "have an operational test for each mode"]

> >KISS ... that's a basic advanced engineering principle ... eliminate
> >unnecessary complication that produces no significant benefit ...
>
> KISS is inherently poor design. It doesn't factor in items like
> expandibility. It looks at requirements and proposes a minimal
> solution.

In many cases, the simplest solution is the best ... all other
things being equal ...

(Before you try to turn this into "Morse is simplest, therefore
Morse is best" remember, I said "all other things being equal"
which is CLEARLY not the case with Morse ... it has at least
a 6 dB disadvantage compared to simple FSK.)

> >a single, well-conceived test can assure the goal of technical competence.

> that theory is important.

NO Mike it's "insist that people demonstrate the minimum level of
technical competency deemed necessary by the government to assure
their safety, the safety of others, and minimal liklihood of interference ot
other, more important services.

SB DX @ WW $OPDX.305
Ohio/Penn DX Bulletin No. 305

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 305
BID: $OPDX.305
May 19, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1SP, N2XL, W3UR & The Daily DX, W5FKX, 4L2M, EA2BUF, EA5XX, DL5EBE, G3SWH, G4BUE & DX News Sheet, GM0DEQ, JI3ERV/NH2C, I2VXJ, LA4YW, SM4CNN, VE6JO, VY2RU/VE1RU and YV5LIX for the following DX information.

3C0DX, ANNOBON ISLAND (CANCELLED). Reports indicate that the Guinea's authorities at the very last minute would not allow 11 of the 13 operators visas. Everything was ready: materials, equipments, operators, plane tickets, medical insurance, and enough money for the big expedition. The URE HQ continues to work very hard and has now rescheduled the DXpedition for October 11th.

4L, GEORGIA. 4L2M/Mamuka, 4L5O/Omar, 4L8T/Valentin, 4L4AK/Amiran, 4L4MM/Mero AND 4L4L/Givi will participate in the CQWW WPX Contest. They will use the call 4L7C and be active as a Multi-OP/Single entry. Look for them on all bands 1.8 - 28 MHz. QSL info for 4L7C (ONLY during the conetst period) is: P.O. Box, 387 Yeroham 80500, ISRAEL.

5W, WESTERN SAMOA BUREAU. Scott Porter, N1SP (ex WA1YTW), W1 QSL Bureau Manager (Incoming), received the following from Martin Cook, N1FOC, ARRL QSL Service Manager: "I have been notified today that the 5 W Western Samoa QSL Service is terminated immediately. The President of the W.S.A.R.C Phil Williams, 5W1AU, states that there are only 4 active 5W1 'permanent resident' stations on Western Samoa. Visitors are issued 5W0 callsigns BUT most do not leave forwarding addresses or QSL Manager addresses when they leave, Phil has been operating the Bureau from his own pocket since 1971.
The ARRL Outgoing QSL Bureau will attempt to forward all 5W QSL cards that are currently at League headquarters. Cards with no route will be returned to the sender via the Incoming Bureaus..... I will be updating the ARRL Web Page ASAP & will add 5W to the "Countries Not Served By the Outgoing QSL Service" (Green Info Sheet) when I have the New Sheets Printed." .....Thanks all, Martin Cook, N1FOC

5H, TANZANIA. The "DX News Sheet" reports Lee, N5HG, will be active until July, 1998, as 5H3HG. Activity will be on CW/SSB, 80-15 meters but plans are in the works to put up a 160m antenna. QSL via home call or WY3V.

BV9, ORCHID ISLAND (TAIWAN). Operators JA3YTE, BV4IA, BV8AE, BV8CF and BV8BC (the Taitung branch of CTARL) will be active May 23-26th. QSL via BV8BC.

FO, FRENCH POLYNESIA. Eddie, FO5OK, is on 3798.5 in the mornings; Todd, N2XL, stated he was weak and had some fading, but there, none the less. There were very few U.S. stations on to work him, and there was no pile-up.

IOTA NEWS.....
Giorgio, I2VXJ, will be active during the CQWW WPX CW Contest (May 24-25th) as IZ9R from Lampedusa, African Italy. Lampedusa is IOTA AF-019. QSLs will be sent via the bureau for every QSO. Activity is planned for all bands before and after the contest.

LES ILES GLENAN (IOTA EU-094). Jim, G3RTE, and Phil, G3SWH, will be activating St. Nicolas Island in the Glenans group between June 28th and 30th. They plan to run two stations simultaneously, with F/G3RTE/P on SSB on the usual IOTA frequencies and F/G3SWH/P on CW. Activity is planned for all bands 80-10 meters. QSLs for both stations will be handled by G3SWH (21 Dickensons Grove, Congresbury, Bristol, BS19 5HQ, UK.) or via the RSGB bureau.

MONACH ISLAND (IOTA EU-111). Bob/GM0DEQ, Eddie/GM0KVI and Robbie/ GM0SEI will be active from from May 24-26th (WX permitting). They will be operating on the HF bands SSB/CW as GB6MI and GB2MI. All QSLs answered via manager GM0KVI. They will be around standard IOTA freq's.

ISLAND OF NEGROS (IOTA OC-129). Gary/K9AW will operate K9AW/DU6 from here May 19th to June 1st. He will also operate during the CQWW WPX CW Contest (SO/AB). QSL via WF5T.

PRINCE EDWARD ISLAND (IOTA NA-029). On June 1st, the Confederation Bridge will be opened connecting Prince Edward Island to the mainland of Canada. The ferry service by Marine Atlantic to the mainland will be terminated. The Confederation Bridge will be the "world's longest bridge over ice covered water"at 12.9 kilometers/8 miles and the highest span being 60 meters/131.24 feet above the water.
To commemorate this occasion, Industry Canada and Radio Amateurs of Canada (RAC) have granted all Amateurs of Prince Edward Island the use of "XN0" as a special prefix in place of "VY2" from May 29th, at 0000z to September 1st, at 2400z.
Special calls also have been granted to correspond with the opening of the Confederation Bridge and the last crossing of the Marine Atlantic ferries. Commencing May 30, 31 and June 1, the special call VY2CB (Victor Yankee Two Confederation Bridge) will be used from the Confederation Bridge site and on May 31st, VY2LC (Victor Yankee Two Last Crossing) will be used from aboard one of the ferries making the last crossing of the Northumberland Strait.

A picture of the Confederation Bridge will be on the QSL card confirming contact with these stations. Additional information and photos of the Confederation Bridge can be found on internet at: http://www.peinet.pe.ca/SCDI/bridge.html or http://www.gov.pe.ca LAST MINUTE UPDATE: A homepage is available now. Completed information of this event can be found at the following WEB site: http://www.isn.net/wxsense/vy2cb.htm

L70FM, ARGENTINA. This special event station will be active celebrating the 70th Anniversary of "RADIO CLUB ROSARIO". Details of operations and length of activity were not provided. QSL via LU4FM (NOT LU2FFD).

LM, NORWAY. Liv, LA4YW, states: "Once again, 'Trondheims-gruppen av NRRL' have received a special prefix call, LM2T, this time because of our city, TRONDHEIM, is celebrating 1000 year this year." Liv said they tried for permission to be active for the whole year but were turned down. So, LM2T will only be active for one week. The celebration station will be active for one week between May 30th to June 6th. Activity will be on all bands and modes, and QSL is 100% via the bureau or via LA2T: Trondheimsgruppen av NRRL, Box 929, NO-7001 TRONDHEIM, Norway.

NH2, GUAM. JI3ERV/NH2C, JG3RPL/N1BJ, and JR7OMD/WI3O will be active as NH2C in the upcoming CQWW WPX CW Contest as a Multi-Single entry. QSL via JI3ERV. Sunrise/Sunset: 1953z/0842z

NOIDXC DXER OF THE YEAR..... Al Hernandez, K3VN (ex-WA3YVN), has been named DXer of the Year by the New Orleans International DX Convention. Selected from a slate of nominees, Al is a well-known DXer who has organized, supported and participated in many DXpeditions. For a brief but impressive bio sketch, see the "The Team" on the Heard Island (VK0IR) Web page at: http://www.ccnet.com/~cordell/HI/#Anchor61756
Al will be honored with a plaque at the 6th Annual NOIDX Convention in New Orleans (22-23 Aug 97), where he will also give a presentation of the VK0IR trip.

QSL INFO AND NEWS.....
Dominik, DL5EBE, informs OPDX that some misleading info has been published in various DX bulletins stating he is the QSL Manager for EM1KA and EM1U. Please note that he is not the QSL Manager for these stations, but for VP8CTR, Roman (EM1KA) at Vernadsky Base, Antarctica.

Reports indicate that the 7O1A cards are being received. ADDED NOTE: Just a reminder that this operation does not count for DXCC.

QSLs for LM2SKI (Nordic Skii World Championship February 1997) has been sent to all via the bureau. A total of 6522 QSOs were made in 11 days.

OPDX SPANISH WEB SITE. Thanks to "QTC Magazine", Tony Pernas, EA1CSI, QTC Magazine Staff, informed OPDX that the OPDX Bulletin will now be translated in Spanish and can be found on the World-Wide Web at:

http://www.intercom.es/qtc/qtcopdx.htm

SV5, DODECANESE. Fred, SM7DAY, will be active May 24th through June 13th as SV5/SM7DAY. His operations will be on 20-17 meters from Kalymnos. QSL via the bureau (home call) or direct.

VE8RCS (Ellesmere Island closing down). From Mike Lonneke HA/W0YR, in Budapest, Hungary: "In a QSO with VE8RCS on 12 May at 0848Z (20 M SSB), operator Steve at VE8RCS told me that Station "Alert" and Amateur Radio Station VE8RCS on Ellesmere Island would be closing down on May 15th. Steve, an unlicensed but authorized operator (who is studying for his own call) said the final QSOs from the world's farthest North station will be about 1000Z on May 15 on 20 meter SSB. He said the shutdown is much sooner than was expected.
Ellesmere Island (NA-008) is located at 82.2N, 62.2E and has been on the air for over thirty years as the communications link as the High Arctic Weather and Experimental Station. It is about 450 miles from the North Pole.
Experiments at Station "Alert" have included measurement of global warming indicators, pollution in the pollution in the global regions and measurements made by the Canadian team for other governments. Now, according to Steve, all functions will be automated. Steve said the step to full automation had been contemplated for some time but "they moved this along much faster than anyone thought. All we have left now is this 100 watt transceiver, the microphone and the 5 element yagi. Everything else has been boxed up." .....de HA/W0YR

VF6 & VX6, CANADA (Attention Prefix Hunters). Calgary Amateur Radio Association (CARA) is celebrating the 75th anniversary. The Alberta Radio Experimenters Association (AREA) was formed in 1922. CARA is one of the largest Amateur Radio Clubs in Canada. A special event station VX6CAR will operate from May 18th to May 21st. CARA members can use a special prefix VF6 assigned by Industry Canada from May 21st to June 1st 1997.

WP2, VIRGIN ISLAND. Andy, SM4CNN/DF3IAL, will be active as WP2Z, St. Croix, May 22nd to May 28th (which includes the CQ WPX Contest). QSL to his present callsign: DF3IAL, Anders Larsson, Riedhalsstrasse 10, D-60437 Frankfurt, Germany. Andy will be happy to QSL via the bureau. Requests with QSO info can be obtained via E-mail to DF3IAL@AOL.COM.

Yep, Jeff, you're going to have to live without drugs, riots, and drive-by shootings. I really sympathize with you. Must be tough. Who, in their right mind, wouldn't trade LA for Tucson. Leave that den of iniquity behind and welcome to God's country.

I, Fred, NY2V, am the original writer -- a ham for 49 years, and regarded as a bit of a Morse expert. This debate is so convoluted that idiotic statements -- e.g. indicating I do not know what a ham's fist means -- occur, causing the debate to lose its integrity. Get your facts lined up before slinging aspersions about "the original writer", OK, MD?

Regards --- Fred Adsit --- ny2v_fred@juno.com

A little knowledge is a dangerous thing,
and it can lead to a lot of debate..

It's not that I don't think that Dayton and its flea market policy can't
be improved, but I note that starting about in November or December
of each year, there are ads from the Dayton Hamvention, which
details how flea market spaces will be sold, and warns that most
likely there won't be any flea market spaces available by some
date or other.

The hamvention also has a website with details on how to order
tickets, flea market spaces, and arrange for hotel or motel
housing. I don't ever remember there being flea market spaces
available at the door, because most are snapped up well in advance,
in fact if you wait until january to buy, you're most likely way too
late.
The new rules on having to remain in the spaces are undoubtedly
annoying but as a veteran walker up and down the spaces, looking
fro a bargain, I also remember being nearly run over several times by
someone anxious to back up his oversized trailer without someone
to direct him. Frankly, if the policy is announced well in advance,
it's just one more reason to not try buying a flea market space so
you can park conveniently as many folks did in the past.

3302. Update on Motorola Micors

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-19 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <33806B89.35C6@erols.com>
Source record: 198128

About a month ago we put out a problem message concerning pingponging (recycling) of our local repeaters. Received many excellent responses and appreciate them.

To bring you up to date, we have eliminated one repeaters recycling by improving the chasis to ground system. It has virtually eliminated the pingponging effect by 99% over the past month. So thank you for that recommendation.

The second repeater, which is about 10 miles away is now experiencing some very serious intermod problems. It almost sounds like a combination of paging systems and taxi cab xmissions but we cannot hear any id what so ever. Spectrum analysers are being utilized to try and pinpoint the offending transmitter(s), if in fact that is what it is. We have just about eliminated any malfunction of the repeater system. It looks extremely clean but we have one more elimination test to do.

One other question that we need some help on from those of you who are experienced with the unit. What squelch gate setting/adjustments have you set your systems for? This is not the repeater sensitivity adjustment, but the adjustable pot on signal level (e.g. the sensitivity set to key the repeater). The repeater experiencing the noise is set for .2

Appreciate comments on this particular setting. Again thanks. We are getting there but it is a slow frustrating process. One down and one to go albiet the latter came up with this new intermod problem that is a son of a gun to track down even with a sophisticated spec analyser.

Contests have existed long before ARRL decided to support those who play that game. Why, there are even a few not sponsored by the Leauge. :-)

Be careful of extremes. I think some of the work ARRL has done promoting public service falls a bit outside the scope of rather strongly emphasized "COMPLETELY."

>At least you admit that, Ed ... in all honesty, I'm surprised that the
>ARRL doesn't sanction you for making such heretical statements.

They won't, because there is nothing heritical about it. Regardless of some of the opinion I have seen offered here, ARRL believes that the technical advance of hams is important; we expend a lot of our resources developing material to do just that.

I will get a little heretical, though -- IMH-personal-O, although I disagree with you that ARRL has done *nothing* useful technically, there is oom for us to do more. Many of the areas that could use more support, by amateur radio in general are those very areas that you have offered as important. Unfortunately, though, the answers about how to get it done are not simple.

There are regulatory questions, manufacturing questions, band-use and band-planning questions, and not all the answers are under ANYONE's direct control. Just as one example, the repeater coordinators (NOT an ARRL function, BTW), are not able to accomodate a spread-spectrum technique that will use a major portion of an amateur band. The weak-signal folks have needs that are in direct conflict with the wideband, multi-user digital folks. The one major step I have seen in the direction of fostering digital technology has come under fire from both sides, with the digital folks saying that the ARRL has proposed something that is overly restrictive and other users feeling that the interference potential of widespread spread-spectrum is potentially devastating.

I wish there was a perfect answer -- I wish that we could post to usenet a single summary of what is wrong with the world and that somehow that would be enough. But it isn't going to ever work that way. If we decided today to coordinate a wonderful, digital system to allow 1 million users to share 3.5 MHz of 2 meters, displacing all of the less efficient repeaters, who would use it? Who has equipment to use it today? Who is building and selling ham gear to use that technology? For a time to come, the answer will be no one. If the digital revolution came to amateur radio, it would result in quiet bands for a long time, until the evolution caught up with the revolution. I, for one, feel that evolution

is a better process. Rather than talk about the need for sweeping changes, let's talk about what incremental step in the right direction can actually be accomplished today.

>> I have clearly understood what your beliefs are about Morse Code testing.

>I understand that you understand my position and also that I am unlikely
>to convert you to my views, Ed ...

Actually, Carl, I have never offered what my views are on Morse Code testing, at least not in the context of this discussion. FWIW, I will offer my personal belief that, in the LONG run, I believe that your views will hold sway. I will add that, in the short run, evolution is less harmful than revolution, and we need to find an incremental step in the right direction, and solutions that accomodate the rather widespread differences of opinion hams seem to have about all aspects of amateur testing. I refrain from offering my code-testing opinon because my opinion is not important to the process of restructuring amateur radio -- yours is! (Collectively yours, that is!) There is not (yet) an ARRL party line, so I do not refrain from offering my opinion for any reason other than I want to be sure that whatever is decided is not unduly influenced by one rather vocal ARRL staffer taking a firm public stand.

>> sales of ARRL technical pubs tell us that most hams want to know more.

>Forgive me, but I've seen ARRL "technical pubs" ... most are so
>absurdly outdated as to render them laughable ... those that even
>attempt to deal with modern technology tend to do so at such
>novice levels that they should be virtually useless to anyone who
>already posesses the technical acumen that should be required for
>a basis license ...

ARRL publications have never purported to be designed to be engineering-level treatments of any subject. Perhaps this is where you and I disagree the most, but IMHO, if one wants to increase the technical knowledge of a group of "students," one must start from where they are and take them to where they want to be. Most hams have some technical interests, but not at the level that interests you. This is a good thing; the world is made a better place for the technical interests of the "average" ham, and, as a plus, we get a fair number of people with much more technical skills, who are willing to offer themselves and their ideas to amateur radio.

>But, Ed, you yourself have admitted (with great courage and possibly
>peril of sanction by your handlers at "HQ") that there are "folks out
>there with FAR more valuable skills than Morse code proficiency" ...
>but, the mere mention of this fact brings accusations from the
>pro-coders (MD, Conn, and a plethora of others) of technical "eletism,"
>"snobbery," and "wanting to create an exclusive playground where only >EEs can enter."

I am willing to wager a lobster lunch that not one of the folks you mention will flame me for what I said about more valuable skills than Morse Code proficiency. :-)

>Morse has outlived the point where it should be
>a 'skill' required to obtain an amateur license with full HF
>priveleges."

This is truly the crux of the questions at hand. If we could stick to it, rather than discussing who is a cretin and whether someone who supports code testing fears technlogy, I suspect we could find an answer.

>license tests.

Martin,

Two points:
1. Even if only VEs had the question pools, they'd still end
up being published as hams that took the tests could certainly
remember some questions. That was how the old AMECO
and other study guides obtained sample test questions even though
the FCC never made the questions published.
2. Rote memorization can be combated with sufficient
variety and scope of the question pools as is being done
now (see below)

To those that claim there is ONLY a lessening
(dumbing down per the likes of several poster's
past comments here) of all requirements needed
for the various theory tests AND those that keep
harping on the rote memorization of pool questions,
you will be happy to know that theory test pools
already have changed significantly and will impact
as of 7/1/97.

As was reported in the W5YI Report of 12/15/96,
the NOVICE and TECHNICIAN question pools
have increased by 46%. The prior set of
questions comprised a total pool of 632 questions,
while the new pool of questions is now 924.
The Novice pool has increased 41% from a total
of 342 questions to 483. The Technician pool has
increased 52% from 290 to 441.

Now I don't know anyone that can just spend
a weekend or even longer to exactly
memorize 440 questions, much less the

over 900 just to pass the Novice/Technician
set of theory elements.

What some may not have known (and I include myself
in that) is that there is no upper limit to the quantity
of questions that can be in the pool. There is
only a part 97 minimum (97.523) that requires
"Each question pool must be at least 10 times the
number of questions required for a single
examination."

Given that no upper bound exists for question pools,
I'd like to sugest that each question that deals with
a formula calculation have at least 20 iterations
where each iteration uses a different set of variables.
That should truly eliminate any rote memorization of
the questions involving formula calculations.

Hi,

I hope this is posted in the correct newsgroup.

I live about 30 mile from the nearest uhf translator.

Well, channel 25 is very ghosty. Sooo I am hoping to make an antenna.

Does anyone out there, have plans to build a UHF antenna?

If so would you e-mail me the plans?

Thank you,

The White Knight

WORKING or STUDY ABROAD

Now the book is here, (144 pages,more than 1000 addresses) which gives
you detailed information about work permits, wages-, working and loading
conditions, visas, travel expenses etc. abroad. You will also find
addresses to companies in Europe, USA, Canada, West Indies, Australia
and Far East, looking for employees within most professions.

INTERESTED ?

Send us a e-mail so will we send you our free brochure which will give
you further information about the book, don't forget to put in your
e-mail address in your e-mail.

mats.hansen@reimers.se

You can also buy the book directly from us by paying 18 pounds,
or $ 30 US through an international coupon to:

MAKEMA & Co
Box 3008
S-261 03 LANDSKRONA
SWEDEN

Stan,
There was an excellent article in QST last year on a quadrifilar helix antenna. I could send you a copy of the article.
It is circular polarized and real easy to build. I've used a single 144MHZ version with the russian RS10, 12, and 15 satellites with good results with only 15 watts output. They produce about 5 DB gain off the end.
For 430 MHZ you will probably need to make a bay of 4 of them in phase to get enough gain to be a practical XMT antenna for any of the high orbit satellites like AO10 or the new phase 3D bird.
For the low orbit birds that use 430 MHZ, a single QFH and a power amp of 100 W or so would probably be OK.

Let me know if I can help.

73, Al (W7XA)

RS did not pull these products because they are sensitive, the FCC has
controll of what anyone sells having to do with regulated transmiting
and receiving products. They are the ones who told RS that they had
to remove these products due to FCC violations.

There's nothing lame about it. It's a valid point in refuting your
claim. If a person enjoys designing radio projects, it's unlikely
that lack of direct access to the HF bands will prevent that
enjoyment.

>> It's merely a matter of a few weeks
>> or months of practice and most anyone can get on HF.
>
>Or "merely" years and years of failure to get to 13wpm. Then the indignity

Such cases, while they probably do exist, are so rare as to be
statistically irrelevant to the discussion of Morse testing.

>of a medical waiver when there's absolutely nothing wrong with the person.
>IMO, Just another form of hazing/discrimination to make some inferior folk
>feel superior to someone who is, in reality, superior to them in all ways
>except wetware modeming. IMO, one way to achieve superiority is to tear the
>other person down and that's exactly what the CW testing requirement does.

All this insulting and exaggeration isn't doing the no-code defenders
any more good than similar behavior does for the pro-coders.

The fact of the matter is that the CW requirements are mostly a red
herring, detracting us from the REAL problems facing ham radio. If
you eliminated ALL code requirements tomorrow, ham radio would have a
nice little temporary increase in its ranks, and then fall back into
the same old no/slow growth pattern we had now. This is exactly what
happened when the no-code Tech began. That change was going to save
ham radio, and attract all sorts of tech types into the hobby. Well,
it did attract a few of them, but mostly what it got was families who
want to keep in touch with each other on two meters. Not a thing
wrong with that, but there are increasing numbers of other options for
that group.

Ah, insults -- the stock refuge of those who have no logical
arguments. The really sad thing is that I generally support the
elimination or relaxation of the CW requirements, but attitudes such
as yours make it extremely difficult to defend that position. I've
sat here and watched you insult poster after poster, and just shook my
head. You have enough intelligence and literacy to make your points
without resorting to insults. What's to be gained by turning this
into a flame war?

This CW argument has been raging for a couple of decades, at least,
and all the rational arguments on both sides have long since been
exhausted. All I see now is boring replays of the same silly crap
from both sides, complete with personal insults and invective, of
course.

And then we wonder why hams have such a bad name, and why the hobby is dying on the vine. Your attitude is part of the problem, Carl, not part of the solution.

He wouldn't. If he's a "competent individual" he can pass a five WPM test with a minimum of effort. With today's testing, getting a 5WPM ticket is a trivial matter. You don't even have to "learn" CW, you can just memorize the letters, write down the dits and dahs, and then decode them and write down the answers.

Yes. The stupidity is the belief this allegedly competent person is not willing to spend a few hours getting a ticket so he can pursue his hobby without "begging" control op privileges from someone who has shown the willingness to struggle through the initiation rites for Ham Radio.

Glen, if you really believe that, I feel sorry that you are so out of touch with reality. The great majority of people love their hobbies. The great majority of people do not love their jobs and some hate them. (IMHO, you don't believe it at all and just lacked anything rational with which to respond).

So you admit that it's just an "initiation rite" ... that is NOT an appropriate
reason for having a licensing requirement ... it is not the FCC's place to
prop up ancient intitiation rites through the force of regulations ...

That is EXACTLY why all Morse testing should be eliminated.

It seemed that RS's Pro-26 recall was due to the cell images (it is a triple conversion scanner, but it gives you a very clear cell image). RS did not want someone to listen to the cellular bands by using the image freqs. (http://www.geocities.com/Yosemite/1325/pro26.htm)
I expect that newer version (?) of Pro-26 will have very low or high IF frequency to disgard unwanted 800 MHz signals.

The similar thing happened for HTX-204.
You can transmit outside of ham bands by ripping of some hardwares from the tranceiver. According to the rumors, RS decided to recall because of this.

I don't know, but RS is too sensitive...

well what I will do is not to buy any RS's (unmodifible) products in the future. I am sure RS loses the customers. There are tons of cheaper (and better quality) products out there that allow you to listen to cell bands... transmit on outside bands and so on.

Ok then explain to me why I MUST pass a 20 wpm code test in order to operate SSB [or other data computer modes] in the HF bands as an Extra Class ham? [I am a Tech Plus who has now passed my Extra Class written exam.]

If you can not answer that question with a logical answer than i fully expect cw testing (for hams) to be removed by the ITU in 1999.

3330. Code vs No-Code

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-20 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <33811075.2803249@news.mindspring.com>
Source record: 197956
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I am a Tech Plus who started as a No-Code Tech. I have passed my General, Advanced, and Extra Class written exams within the past 12 months.

When I go to my local club meetings (two clubs) and read the newsgroups it makes me ashamed to tell people (non-hams) that I am a ham.

Where did this hatred between pro-code and no-code hams come from? Ham radio is supposed to be a fun hobby. At least that is what I thought.

Ok lets get practical. The ITU will probably eliminate all code testing for hams in 1999 for international agreements between countries. There is no logical reason to continue testing cw because it is an outdated mode of communication. AMTOR and packet are much better as a data mode of getting thru where cw can't. Any ham can use AMTOR and packet therefore it is a better mode to use for public service emergencies. Here in the Atlanta area the local governments want us hams to provide them with packet communications in case of emergency use. It is faster and easier to use than cw.

But I also like history and keeping a part of the traditions of ham radio for the future. So lets say that we (U.S.A.) continue testing cw at 5 wpm (no matter what the 1999 ITU does). We eliminate the Tech Plus license class. We make 5 wpm code a requirement for the General Class license. We keep 13 and 20 wpm testing ... 13 wpm for Advanced Class CW HF sub-bands and 20 wpm for Extra Class CW HF sub-bands only. There would be no extra code exam (past 5 wpm) for access to the Advanced and Extra Class HF voice and data bands.

This will keep CW alive for history's sake and fun and experimenting if desired and still move us into the 21st Century in the search for more modern modes of communicating (like our charter intended for us to do).

The 95%-idle situation is another discussion altogether. And I agree
with you; in many cases, the SS signal would not affect a repeater
operating under CTCSS. Will this be true for the SS station located at
the foot of the hill on which the repeater is located? The squelch may
not break, but to what degree will the raised noise floor affect the
sensitivity of the system? How about when a dozen SS stations are
located near the repeater (or near one or more outlying users) -- after
all, if this becomes popular, we may see a lot more than the occasional
experimental station using SS. I think the potential for interference to
existing users needs to be analyzed. I am not saying that SS is a bad
thing, but that a lot of factors need to be considered as the amateur
community finds ways to foster its use and development in amateur
communications.

..

Okay, I'll bite: If I take a 3 kHz bandwidth narrow-band system to the
top of a large hill 10 kM from an area where there are 100 SS stations
using voice across 4 MHz, how much will it raise my noise floor?

>The digital folks are right and the ARRL should never have opposed

If memory serves, ARRL is the one who has asked for the SS rules change
that is on the plate. We have been criticized by some of both the
weak-signal digital folks.

That rule change is already on the plate, at least for some bands and
frequencies.

The dinosaurs were made extinct by a sweeping change, according to the
latest views. When the asteroid hit, it was the luck of the draw as to
who made it and who did not. I do not want to take my chances.

>run."

I have never asked anyone to pay homage to *me*. And, I am not convinced
that the view you believe runs the ARRL is a minority view. IMHO, it is
not, but the vote is mighty close. In one sense, there probably is no
majority view; I have seen so many variations on "what is right for
amateur radio" that I suspect that the best we could do is to find some
concensus common ground and build from there. I suspect that the
majority view is "stop this fighting and find a way to share," a lesson
they tried in vain to teach me when I was a younger fellow. :-)

No matter who wins the close race for "majority," IMHO, the "minority" view is shared by so many people that any solution that will keep amateur radio alive and whole must include the views of *all*. I see industry standards bodies find concensus all the time, developing standards from a wide range of opinion and vested interest. I would like to think we can do the same.

As for your opinion that any minority view "runs" ARRL, I just don't agree in this case. The ARRL Board took one committee's view, offered it to our members as a "discussion draft" and said about as clear as I can imagine, "This is one idea -- tell us what you think." To me, it doesn't seem like anything is "running" this show (yet); the Board wants more input from our Members.

>As one who has taught at the college level, I can assure you that

I think we should bow to the "majority view" on this one, Carl. :-)

Tell ya' what, though; seeing as I like you, I will buy you a new ARRL Antenna Book, and mail it to you -- a personal gift, mind you, not out of my meager department budget. I will bet you a lobster lunch (I love lobster) that you will learn something new from it. :-) (See, you won't have to worry about Mike Deignan swallowing his tongue!)

>Well, Ed, if the cretins would act less cretinous and the fear-mongers

>In the meantime, I guess we'll just have to keep wading through the
>piles of dung that they sling in their attempts to muddy the waters and
>distort the facts ... (you know, the Morse Myths and all that rot ...)

I have noted that the mudslinging and distortion seems to come from all diretions about equally. I think that the term Morse Myths can be applied to some of the discussion points I have seen offered by the anti-code-test folks, too; it does not cause brain damage and it is not preventing the high-tech folks from getting into amateur radio to do all these high-tech things that are best suited for VHF and up, where there is bandwidth to do them.

While I have enjoyed this one a lot, I still stand on my beliefs: the damage being done to Amateur Radio by the argument itself is more than keeping or eliminating the code would be. Any solution that will work must include the needs and views of all concerned. It is up to us to work it all out, somehow. I think, in the "long run," our ability to work together for the common good is what will determine how we fare.

I disagree that they are "not able" ... they are "unwilling" ... if repeaters
used CTCSS squelch, which some refuse to do because they refuse
ANY possibility of sharing "their" channel ... even though their repeater
is idle 95+% of the time ... then I am convinced that spread spectrum
signals could be overlaid on the 2m and 440 repeater bands and the
repeater users would virtually never even know they were there ...

> The
> weak-signal folks have needs that are in direct conflict with the
> wideband, multi-user digital folks.

Again I disagree ... their fear of "devastating interference" is substantially
unfounded ... in the vast majority of situations, where even moderate
physical separation exists, the SS signals are likely to be undetectable
to the narrowband "weak signal" folks ...

> The one major step I have seen in
> the direction of fostering digital technology has come under fire from
> both sides, with the digital folks saying that the ARRL has proposed

As one who has taught at the college level, I can assure you that
nothing I have seen in any ARRL publication comes close to "an
engineering-level treatment" ... That's not what I was objecting to.
I have stated on numberous occasions that ham tests should NOT
require an engineering level of technical knowledge ... I restate the
opinion that ARRL pubs are, for the most part, laughably outdated
and at such an elementary level that they are below the level of
technical acumen that should be required for a basic license ...

> Most hams have some technical
> interests, but not at the level that interests you.

I don't honestly believe that most of the current coded hams have
much technical interest ... I believe that the majority are gamers
and yackers ... "CBers with an attitude" ... who simply want to
use radio as a medium for completely non-technical pursuits.

I'd like to see that change ... I believe it must if our service is
to survive the first decade of the coming century ...

> >But, Ed, you yourself have admitted (with great courage and possibly

> Good deal Carl!
>
> Hey, I thought the "invention" of Amateur Radio also had something to do
> with providing emergency communications (I.E. field day ect.) What is the
> "official" reading on this?

I have no idea on what's "official" ... but I think field day, SET, etc.
are some of the possible practice opportunities for operating under
emergency power, with pre-prepared gear, and simulating some form
of emergency exercise. Field day is more of a contest/game and
doesn't have any value as a practice exercise beyond setting up
temporary antenna systems, generators, etc. but even that has
some value.

The Morse position at the field day site may rack up a lot
of contest points (I believe it gets a handicap to boost its
score) but it has virtually no relation to any real-life emergency
operation ... it's just another CW contest for the gamers ...

In summary, yes, emergency communications is supposed
to be a big part of ham radio .. but Morse has nothing to do
with it in the real world and the contest-like aspects of field
day have little relation to emergency communications either.

We should practice, practice more, and practice more realisticly
for emergency communications ...

Good for you in wanting to make your own antenna! Channel 25 has an audio carrier freq at 541.25 MHz (video extends 4.5MHz below). The ARRL handbook and the ARRL Antenna handbook have how-to-build articles for antennas in the 70cm (420-450MHz) band. They include yagis, corner reflectors, etc. the build-to examples give frequency/dimension guides that will make it very easy for you to build
one for 540 MHz instead (it will be a little smaller than the ham freq versions).

If you can't (or don't want to) buy one (handbook) -- the local library (community or university) will have a copy.

30 miles isn't tooooo bad for those frequencies (depending on terrain), so anything should improve. Ghosts are typically from
reflections so you might benefit from directivity more than gain.

Go ahead an experiment -- remember the age old quote "All antennas work - some just better than others"

Cheers

I propose there be just 4 license classes: Technician, General,
Advanced, and Extra.

(1) Drop the Novice class.
(2) Drop the Tech Plus class.
(3) Give the Novice HF CW freqs (except 10m) to the General Class.
(4) Give the Tech Plus 10m HF freqs to the Tech.
(5) Change the General Class code test to 5 wpm.
(6) Add the 13 wpm code test to the Advanced Class (but only for
access to the CW sub-bands).
(7) Change the 20 wpm code test for the Extra Class (for use only
for access to the CW sub-bands).

I think that this was one of Bogen's "booster amplifiers" for distributed sound systems. These systems used (and still use) a costant voltage scheme, where each speaker has a transformer with a 70 volt primary and a tappable secondary rated in watts, so you could adjust the output of each speaker for local conditions. A typical distributed system would be the hotel conference room with twenty 8" speakers in the ceiling. If you had this amplifier (we're assuming a pretty old hotel) you might have each speaker tapped at 5 watts (20x5=100). You might also tap the speakers closest to the microphone position at a lower wattage to lower their output and improve gain before feedback. I think the rule was the wattage was supposed to add up to no more than the rated output of the amp, but it could be less than the rated output without problem without problem.

Hi all,

I am going to move to Tucson AZ in August. I would like to know what there is to do in a small town. Ham radio clubs, scanner clubs, etc...

For example, out of the hundreds of Tucson frequencies I have to monitor which ones are the really fun ones? Speaking of police and fire of course.

What are some of the best ham radio repeaters to use? I am looking for a young and progressive type style of repeater to hang out on. Something like the B.A.R.C. repeater here in Los Angeles. Where the average age is about 35 years old. Is packet radio there? Do any of the ham radio repeater rebroadcast shuttle transmissions? Should I bring my 440 repeater with me? If I do is there spectrum space to put it on? How about hill tops?

After growing up in Los Angeles, then spending most of my military career in the Los Angeles area. Moving to Tucson is going to be a heavy culture shock. Any help that anyone can give me would make this shock come a little easier. Right now, I am not shure if life is there. :-)

Last things first, commercial decoders at 71 Hz will be happy within about 0.4
Hz. The best way to tell if you're close enough is ... does it work?

I am assuming it is an analog type. Trial and error are great substitutes
for expensive gear - isn't that what ham radio is about anyway? ;-)

I don't know the tcvr you have, but generically the tone is injected before
the deviation ('IDC") pot but *after* any compression/limiting audio stages.
If you can't monitor your transmitted waveform to set dev or see distortion
then this can be tricky to set to correct deviation.

I think these local laws are pertaining to the operation of a motor vehicle (in this case) and govern your actions in that context only. So, no constitutional rights are violated....you simply can't operate a motor vehicle in a manner that does not comply with local rules. If a constitutional issue arises...like race or sex, etc. in the application of those rules, then various federal laws and the constitution can be applied. In most states, the Amateur Radio License excepts the holder from the scanner restriction, but the state legislature has to state the exception.

I just spent four, mind-boggling months studying for the extra class license and succeeded in going from no-license, to passing all six elements last Saturday.

Yeah? So the code is a little tough to learn. So what? It is not THAT tough to learn, and I am VERY proud of what I have just accomplished. All it requires is a willingness to break out those code tapes, devote some time regularly to the task, and DOING WHAT IT TAKES!

I think things are just fine the way they are... with the possible exception of maybe lowering the General code requirement to 10wpm.

The No-Code Tech is not very hard to study for, if one is THAT allergic to morse code. Wanna just pick a radio off the store shelf and start working the world with no special effort invested? There are plenty of nice 11 meter rigs on the market that will do the job for you...

My XYL went from knowing absolutely nothing about electronic theory, to Novice, in about 6 weekends. She is ALSO very proud of her accomplishment, and will be testing for Tech (+) in a couple of days.

Ham radio in danger? I think not. I have watched the data bases accumulate about 20 thousand U.S. call signs over the last 4 months that I have been working towards my ticket.

Amateur radio operators
from the State of Michigan

We the Amateur Radio operators from the State of Michigan do hereby agree to continue to abide by all the rules of Amateur Radio. We pledge to improve the amateur radio bands, and teach new hams joining the hobby the correct operating procedures which should be followed on the amateur bands. By doing this, we are petitioning the American Radio Relay League in our fight to help clean up the language on the Amateur bands, and are looking for civility/politeness in conversations. By showing our support in this petition, we are hoping that the American Radio Relay League can help us fight the language that we are hearing on these bands.

We are asking the American Radio Relay League to help in this clean up by: Hosting several national forums on this problem, and how it can be addressed, We are looking for a promise from the ARRL to report on how enforcement is currently done. We are also looking for a promise from the ARRL to create a sort of self enforcement mechanism, and possibly create a large fine mechanism that will generate enough money to help correct this problem. We realize there is such a thing as freedom of speech but, there are also the words such as civility, and politeness.

I Deborah K. Kirkbride KA8YKK am asking all amateurs in the State of Michigan to please sign this petition, and send it to me at the following address: 1315 Center Avenue, Apartment #1 Bay City, MI 48708. I will in turn when enough signatures are gathered be sending all petitions received to the ARRL.

Please make copies of this petition and pass it along to other clubs, and Amateurs in you area. Please help me in this fight to get the Amateur Bands back on the right track and keep them there.

If you are not from the State of Michigan feel free to down load this off my web page at http://www.concentric.net/~ka8ykk. Change the state name to fit your own and start the petition in your state. If you wish you can send them to me and I will submit all petitions to the ARRL in one large group

Thanks,

Debbie Kirkbride KA8YKK

3362. Re: Proposed New License Classes

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-20 00:00:00 UTC
From: Al Gerheim <gerheim@sonalysts.com>
Message-ID: <3381D8A2.2751@sonalysts.com>
Source record: 198003
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I propose that the following classes of licenses be added:

1) CW Debater. For a license fee, and no theory or code tests,
they will be allowed to debate the CW/no CW issue with no antenna,
power, or language restrictions.

They will be allowed to use the 160 meter band from 1.99995 to 2.000
MHz.

2) Repeater Tester. After taking a 500 question test on operating
practice, they will be permitted to test their repeater coverage,
but will be prohibited from actually talking to other stations via
the repeaters. They will be assigned special 8X10 callsigns, for
example WARDSGES1RWFGDSVCTY.

3) Monologist. Special endorsement on all classes of amateur
licenses. Permits the bearer to tie up a repeater in excess of
40 minutes. Prohibited from transmitting intelligence.

Any more suggestions?

I have an 11m friend in LA that would probably be able to help you with
the above, and that includes a good bias design and high drive input
circuitry.
6 X 8877's in the mobile! 4 X Leece Neville 200 amp alternators, one for
the heaters, the other three through individual 3-phase transformers
providing around 6kv at 4 amps. No splatter, good signal.
If interested, e-mail me direct and I'll pass your address to him.

Sorry, I don't know what your name is, but anyway, congratulations.
You have the hard part done. Now go learn Morse code and you can
kick back and enjoy ham radio. Hurry up, or you'll have to take the
written tests again.

>When I go to my local club meetings (two clubs) and read the
>newsgroups it makes me ashamed to tell people (non-hams) that I am a
>ham.

You read newsgroups at a ham club meeting ? That sounds exciting.
If you are ashamed to be a ham, tear up your license, get a 610
form, check the box at the bottom where it says 'SCREW YOU, I QUIT',
and send it to the FCC . Better yet, stop wasting your time reading the
newsgroups and use it to learn Morse code.

>Where did this hatred between pro-code and no-code hams come from?
>Ham radio is supposed to be a fun hobby. At least that is what I
>thought.

Oh, it's hard to say where it came from exactly. Basically, it stems from
the 'something for nothing' mentality of the 90's I'd say. First we gave
away VHF operating privledges, and, in some peoples opinion, that
didn't do much for the hobby. Now, the people who got VHF want the
rest with the same amount of effort they've expended so far - none.
You thought right. Ham radio IS fun.

>Ok lets get practical. The ITU will probably eliminate all code
>testing for hams in 1999 for international agreements between
>countries.

Don't hold your breath until that happens, you might turn blue....

>There is no logical reason to continue testing cw because
>it is an outdated mode of communication. AMTOR and packet are much

There are a lot of logical reasons. But most people posting in this newsgroup
aren't capable of being logical. CW isn't outdated, it works just as well now
as it did 50 years ago.

>better as a data mode of getting thru where cw can't. Any ham can use
>AMTOR and packet therefore it is a better mode to use for public

>service emergencies. Here in the Atlanta area the local governments
>want us hams to provide them with packet communications in case of
>emergency use. It is faster and easier to use than cw.

Any ham can't use AMTOR and packet. Only the ones with the equipment
can. Packet is 'easier to use' than CW if you have a TNC and a computer.
Damn hard without those two items. AMTOR and PACTOR are virtually
impossible without some hardware, but there is one guy we all know who
can copy all that stuff in his head......

Packet may be easier for YOU to use, but CW is much easier for me. No
parameters to set. No audio levels to adjust. No computer software to
set up. Don't have to worry about collisions and retries. MYCALL is always
the same. Don't need any nodes or digipeaters. Just grab the keyer and
away we go.......... PLUS, if you are on HF, you will find about 500 times as
many people to talk to on CW than you will find on PACKET.

>But I also like history and keeping a part of the traditions of ham
>radio for the future. So lets say that we (U.S.A.) continue testing cw

So do a lot of other people. Maybe that's why they want to keep Morse
code testing......

>at 5 wpm (no matter what the 1999 ITU does). We eliminate the Tech
>Plus license class.

We can't eliminate the Tech Plus license. We'd loose you if we did that.

>We make 5 wpm code a requirement for the General
>Class license. We keep 13 and 20 wpm testing ... 13 wpm for Advanced
>Class CW HF sub-bands and 20 wpm for Extra Class CW HF sub-bands only.
>There would be no extra code exam (past 5 wpm) for access to the
>Advanced and Extra Class HF voice and data bands.
>This will keep CW alive for history's sake and fun and experimenting
>if desired and still move us into the 21st Century in the search for
>more modern modes of communicating (like our charter intended for us
>to do).

Gee, that sounds like a hell of an idea to me. Probably sounds like a hell of
an idea to you too - you'd be an extra class tommorrow without taking any
more tests if you could talk the FCC into that idea tonite......

If you are really interested in ham radio, don't stop at this newsgroup. Keep
going, like a lot of other people before you did. Don't wait for the easy way
out, it may never come. Don't waste your time posting five hundred new ideas
for a no code HF license thinking that somebody here will transpose those ideas
into a petition to the FCC. Won't happen. Bite the bullet. Learn Morse code. It
won't be any harder for you to do than it was for a lot of other people. At
the beginning of your message you mentioned 'hatred' between the procode and
nocode groups. By writing messages like you just did, you are just joining the
gang. It doesn't matter what you say in this newsgroup that is procode or what
you say that is pro-nocode, whatever you say somebody will come along and
disagree with it. And then somebody will come along and disagree with them.

Nobody in this newsgroup has any power to change anything regarding regulations for ham radio licenses in the United States. Only the FCC has that power. All we can do here is 'discuss' it. And the more we 'discuss' it, the more divided we become and the more procode/nocode 'hatred' we generate. So take your pick. Go learn Morse code and enjoy ham radio, or stay here and help generate some more hatred.

73, Jim KH2D

>> > viewed as a 'filter mechanism' to exclude those unable or unwilling
>> > to learn the code, is discriminatory".

>Again, I would like to point out the flaws in this statement.

>1) Anyone UNWILLING to learn code IS NOT being discriminated against. They
>have CHOSEN not to participate.

I might have to agree, that the reasons given here may be poor, but it
does not deny the fact that code testing is discriminatory.

From the 10th Edition of the Merriam Webster's Collegiate Dictionary:
discriminate: distinction, to distinguish between ~ 1a: to mark of perceive
the distinguishing or peculiar features of 1b: distinguish, differentiate
~ 2: to distinguish by discerning or exposing differences; to distinguish
from another like object ~ vi 1a: to make a distinction ~ 1b: to use good
judgment [??] ~
[****]2: to make a difference in treatment or favor on a basis other than
individual merit[****]

I believe the last definition has the most relavence here, and it is
precisely the issue. It is the "merit" of the code tests to determine
operator qualifications which is in dispute. It is the existance of the
current requirement (that all applicants must memorize and become
proficient in one particular popular encoding scheme), and it's
relationship to, or more specifically the lack thereto, an licensee's
ability to operate a radio transmitter on the amateur bands in compliance
with national and international regulations which is in question.

To require and reward this particular type of manual proficiency, which is
not a required mode of operation, does not demonstrate an operator's skill
and knowlege to otherwise operate amateur radio transmitting apparatus,
and does not demonstrate an operator's knowlege of the underlying radio
principles or pertinent regulations, is indeed treatment or favor on a
basis other than individual merit. Governments should stay our of the
business of awarding brownie points for extracurricular activities.

>Therefore: Neither of the above mentioned cases can be in any way defined
>as discrimination. The Canadians are wrong.

>K4XA
>Graham

The good gentleman from 4 land is wrong. There are many good reasons to learn code and operate CW. But none of them are persuasive as a requirement. Overall, the Canadian stance is well reasoned and will find general support at the ITU.

A question was asked recently about what sort of test might replace the code exam (Bob Wexelbaum, I think). My view is the tests already exist. But it can be argued that supplementing the content of those written exams would be appropriate in such an eventuality. Gary (also in 4 land) has made an excellent suggestion in my view, with regard to practical problem solving on the written tests. I would like to see that implemented (so I could work the problems) :-). Perhaps Gary would like to provide us with an example of one, if only to tantalize?

In addition, merging some or all of 4A with 3B, and adding 5 written questions regarding the Morse characters would be a more than adequate requirement for HF privileges. Hardly a "dumbing down". The technical "level" of the questions in the written exams thru Extra is appropriate for amateur radio. The scope of the material could be increased to be somewhat more comprehensive and inclusive. That's a lot of work to pile on the VEC's. However, I think they have demonstrated they are more than up to the task.

Hello Everyone,

I have for sale an Icom T7-A dualband handheld. It is five months old and is in excellent condition. Comes with 3 watt battery, duck, charger, manual, and box. This unit will RX: 50-199, 300-399, 400-599, 600-999 mhz. (Cell phone blocked though) :(Also, the TX has been expanded. I will also throw in the softcase. ($30 value)

This is a good radio, but I am selling it because I want a dualbander w/ 2 vfo's. You can be the new owner for $270 which includes shipping from Montana.

Thanks,
Adam / kc7ljq@hotmail.com

3373. CB'ers on 2 meters??

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-20 00:00:00 UTC
From: Paul Jordan <jordan@*santanet.com>
Message-ID: <01bc6555$6c1b8660$4b2977cc@jordan>
Source record: 198014

I've read quite a few posts here that state that all the old cb'ers have progressed to 2 meters. In the experience I've had, I've NEVER heard a single "Good Buddy", Smokey report, or any of the other jargon used by cb'ers on the local frequencies here in Alaska.
Maybe the problem exists in your local area (If you are of the minority that think this way). In Alaska, we tend to track down misusers of the radio bands and enlighten operators on proper usage of the 2 meter band (Especially if it involves repeater usage).
CB in Alaska is pretty much dead and I'm sure there has been some migration of old cb'ers to 2 meters but, I guess they've learned proper radio procedures as well as etiquette. One of the main reasons I went and got my no-code technician license is because I need to be able to call for help at any time and CB is just not an alternative any more. I am also available when other amateurs call for assistance.
As for the negativism displayed towards 2 meter users, I think you should be accepting these users into the amateur radio hobby because they ARE increasing the numbers of licensed amateur radio operators and are helping when it comes to taking bandwidths away and giving it to cellular phone companies.
In conclusion, I thnk you need to clean up your own backyard and not continue degrading those of us that use 2 meters as a primary means of communications in remote areas like Alaska.

If you can't say something nice, don't say anything at all...

Paul Jordan

>My approach to learning code was no different than my approach to
>studying Vietnamese, Spanish, and German.

I have to agree here. When two people who have no other way to communicate, develop (or learn) a way to communicate, they have learned a language. It can be hand signals, smoke signals, eye winking, it doesn't matter. CW is a form of communication and a language in the sense that it allows two people to communicate who otherwise could not.

My opinion only.... or maybe not :)

Ouch - I got the point and I resemble that remark. Actually, it's no
struggle at all. If it ain't a one or a zero, it ain't my problem.

Hi folks,
what the heck are those guys complainin about ?
They`d better spent their time on learning cw :-)
There is no discrimination,those guy`s just decided not to learn cw.That`s
all.
Looks like a new way of live "get more for less".
Well speedtest is a bit silly but no cw for hf ? No Way !
At least we should know how cw works even with low speed e.g. 8wpm.
The one who wants to do cw increases his speed anyway.
Keep CW-test !

Because at this point in time, the 20 wpm test is the other requirement
necessary to achieve the goal. Its that simple. Someday things may be
different, but not today. Congratulations on your Extra written!

3383. Amplifier repairs in Chicago area?

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-20 00:00:00 UTC
From: Todd Little <little@ameritech.net>
Message-ID: <338222A1.68@ameritech.net>
Source record: 198024
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I need to have some amplifiers worked on as I have neither the
equipment, time, or manuals to work on them myself at the moment.
The amps are made by Mirage, KLM, and Tokyo Hy-Power and
cover 2, 220, and 432. They may only need minor adjustment,
but I'd like to get them checked out and ready to go for the
upcoming VHF QSO Party and have other areas I need to spend
my time (such as building antennas, wiring harnesses, antenna
supports, radio supports, power and battery arrangements, etc.)
for my rover entry. I'm in the northwest suburbs of Chicago
and willing to drive a bit to take them some place that
can work on them quickly and do a good job. AES is too back
logged to do the work. Any suggestions greatly appreciated.

73,
Todd

If the person's interest is in designing equipment, modulation and
coding techniques, and protocols to combat the channel impairments
of the HF channel, access to that channel is ESSENTIAL for testing,
experimentation, and characterizing the behavior of a system. There
is no other way, short of a full-blown hardware channel simulator, which
would cost a minimum of tens of thousands of dollars to build and take
a tremendous effort to test, calibrate, and validate ...

How do you know that? Do you have detailed statistics on how many
people have tried and failed over the decades? The existing community's
experience is self-selected for those with inherent Morse talent/ability.

I'm running a contest that gives away free logging software !

We have a winner for May in the Log-It v5.0 Logging Software

giveaway ...

It is : David - N9PGH Indianapolis, Indiana

You could be the June winner by submitting your name prior to midnight,

May 31.

The website has lots of other neat stuff too ! Like links,

shareware downloads, and more.

Try the CHAT SHACK while you are there. Get some friends together

and keep in touch when the bands are down or anytime !

Take a look ! Thanks ... Jim

In article <33811075.2803249@news.mindspring.com>, SCO <sco@sco-inc.com> wrote:

>Where did this hatred between pro-code and no-code hams come from?

Exactly what hatred is that? Are you referring to Carl's recent post where he publically states he personally hates several USENET posters on the "pro-code" side?

I'm not aware of any "pro-code" posters who have publically stated they hate anti-code posters. Its important to note that while many of us personally disagree with people like Bill Sohl, Todd Little, and Gary Coffman, we can still have an intellectual debate about the topic without it affecting our personal likes or dislikes for one another.

Now, if you're referring to "on-air" comments made by old-timers regarding codeless techs, that's a different matter... Unfortunately, there will always be people like this -- they existed back in the days of incentive licensing, the Novice enhancement, the cut-over from FCC field-office to VE testing, and so on. Fortunately, they usually number a very vocal minority, and the vast majority of people you will find on the radio are helpful, "average" people with an interest in radio like yourself.

>There is no logical reason to continue testing cw because
>it is an outdated mode of communication.

40% of amateurs on HF use CW. That makes it worthy of testing as an operational element.

>AMTOR and packet are much
>better as a data mode of getting thru where cw can't. Any ham can use
>AMTOR and packet therefore it is a better mode to use for public
>service emergencies.

Something like <10% of amateurs use AMTOR or packet on HF on a regular basis. Why test for something <10% of amateurs are going to use? It would seem that AMTOR/packet are great deal in more jeopardy of becoming extinct than CW is.

>Here in the Atlanta area the local governments
>want us hams to provide them with packet communications in case of
>emergency use. It is faster and easier to use than cw.

Packet is excellent for routine health-and-welfare traffic in emergency communications. Almost all tactical traffic has to be FM voice. 90% of

local-government interest in emergency communications is VHF-based,
local FM. Other organizations, like the Red Cross, are usually interested
in local as well as long-distance communications for tactical and
H&W traffic.

>Sure... First, he's helping >you<, isn't he? If I help a friend work
>on a project, I don't necessarily expect reap benefits (i.e. if I help
>a friend work on his car, I don't expect to drive it.) In many respects,
>his answer sounds awfully selfish.

So? What is wrong with selfish? It is an avocation and anyone who
chooses such an activity for their spare time that is not doing so
for both personal benefit (enjoyment, relaxation, and utility) *and*
self-satisfaction (through contributing in a meaningful way) has
psychological problems.

You also have a really poor idea of how technical development is done
and how long it takes; particularly with people who are doing it on
their own time. Think of these factors, multiple design iterations,
late midnight sessions, spur of the moment ideas and inspirations, tweak
and re-tweak opeating parameters, operations under varying conditions
to confirm robustness, etc, etc. This doesn't happen in one weekend
session; this takes weeks or months, even sometimes years, of repeated
activity. There is no good reason why a person who is competent to
perform these operations should have to go on a continuing basis to
Cecil for to act as control operator or just deliver it to Cecil and
then go away without any further benefit.

Also, no matter how much he considers Cecil a friend, and vice versa,
no good friend asks another friend to do something for weeks and
months at a time that doesn't also help that other friend in some
way also. Your friend might help work on your car some weekend, but
would you ask him to help you on a complete car restoration from the
ground up without establishing *any* understanding of mutual benefit?

>Second, he can reap benefits, by operating under your license, with
>certain restrictions.

That you could expect someone to be capable and willing to develop a
new design or technique, and then require him to go to someone else
for permission and supervision *every* time they feel an urge to use
it is ridiculous and asinine. This is even more asinine in that it

is possible that the technique involves some RF engineering that Cecil, the logic designer, might have to struggle to understand (sorry Cecil, just trying to make a point :-))! This is a strawman set up by you to let you write this off with an easy conscience. The fact is that no rational person would operate under these conditions and there is no good reason for him to have to do so.

Cecil ... the stock answer to the question seems to go something
like "those stinking no-coder, technical types should be GLAD to
grovel at the feet of "higher class" beeping hams and hand over all
the technical stuff they've developed so the "higher class" beeping
hams can use it, too" (oh ... I almost forgot, "they should also install
it and maintain it for the benefit of the "higher class" beeping hams,
since they can't do it themselves 'cause they were too busy learning
to beep to learn how to do that technical stuff themselves ...")

No, Graham, the Canadians are dead bang right ...

Arbitrary "filter mechanisms to exclude" (anyone for anything that's
not truly relevant and mandatory) are discriminatory and should NOT
be part of government-mandated licensing schemes.

Cecil (and at times, Gary too) wrote:
"CW is not a language..."

Holding onto that kind of opinion is what makes learning the code
so miserable for you.

My approach to learning code was no different than my approach to
studying Vietnamese, Spanish, and German.

For example, to understand the spoken VNese phrase Chu'ng to^i -du+o+.c
ba cha'u, I would have had to spent much time committing each word to
memory:
chu'ng to^i = we (exclusive)
chu'ng to^i = we (exclusive)
...
-du+o+.c = have
-du+o+.c = have
...
ba = three
ba = three
...
cha'u = child(en)
cha'u = child(en)
...
Once I knew those four words (along with hundreds of others over the
course of a semester), someone could (slowly at first) put all four
words together, and I'd hear the four words seperately (and form four
individual meanings). Eventually, the speaker could say the four words
at normal speed and my mind wouldn't hear the individual words but
rather take meaning from the complete phrase.

This is *no* different than how one should approach code. To copy the
word "ocean" I initially had to copy each letter individually, but
eventually someone could send --- -.-. . .- -. quickly and I wouldn't
hear the seperate letters but rather the entire word.

In learning a spoken language we strive to comprehend an entire phrase
rather than deciphering word by word.
In learning the Morse language we strive to comprehend an entire word
rather than deciphering letter by letter.

Same mental process in either case (I imagine one would have to be
proficient in both a foreign language and the Morse language to see
this).

If you don't take this "Morse is a language" approach you'll hate code
and never want to use it (and strive to do away with it). Pity that
both Cec and Gary et al failed to see this intimate connection.

73 from Hawaii - oops! I mean Nevada,
Jeff KH2PZ / 7 (for 2.5 more weeks)

P.S. Vietnames is a tonal language with six tones. Lucky for us
non-native speakers, the correct tone associated with a particular
word is part of that word's spelling. Thus, you'll see the tone markings
' (rising tone) ` (decending) ~ (low-high) . (very deep)
? (fall-rise)
included within each written word. (No mark means to use a flat
tone.)

Hello and thanks for reading this. I have the following items available for sale.

40 ft. crankup/crankover tower
Ham-M rotor
CDE rotor controller
100 ft. 9913
100 ft. RG-8
100 ft. 8 conductor rotor cable
2 TV antenna masts
VHF Ringo Ranger (ARX-2B)

Asking $295 for the whole package!!! If interested I can be contacted at kelchr@bright.net
I am located near Akron, Ohio

> newsgroups it makes me ashamed to tell people (non-hams) that I am a
> ham.

Maybe you should start a new club ... find the folks in you area
who have similar interests and opinions and go for it ... then you
can gradually try to convert some of those with less progressive
ideas ...

> Where did this hatred between pro-code and no-code hams come from?

Decades of government supported, ARRL sponsored discrimination
against non-beepers by beepers ... plain and simple.

> Ham radio is supposed to be a fun hobby. At least that is what I
> thought.

Ham radio *should* be fun for those who pursue it ... I'll grant you
that ... but it primarily *supposed to be* a service oriented towards\
technical pursuits and public service ...

> But I also like history and keeping a part of the traditions of ham
> radio for the future.

Your proposal for continued CW testing is unacceptable ... once
the ITU treaties are changed, ALL Morse testing should be eliminated.
Those who wish a certificate for their wall demonstrating code proficiency
can buy one from the ARRL ... but government-mandated Morse is no
longer appropriate ...

> This will keep CW alive for history's sake and fun and experimenting
> if desired and still move us into the 21st Century in the search for
> more modern modes of communicating (like our charter intended for us
> to do).

If Morse deserves to survive, it will do so on it's own merits, but it should
not be kept on government-mandated life support ...

>Am I misreading something or is there no way to crossband without the
>2710 being in in contiuous transmit mode..????

The crossband repeater instructions are not published at all in the
radios instruction manual so you are not misreading anything.

1. Set up the bands the way you require.
2. While the radio is powered up press and hold the VHF Main Tuning
Knob, UHF Main Tuning Knob and the VHF SET Knob.
3. The memory channels will now be a flashing " L " in the display.
4. Pressing the VHF SET Knob reverts the radio back to normal.

While in crossband repeat, the radio may not generate or decode a
CTCSS tone. It should pass a CTCSS tone from another source though.

First off I have to defend myself. One, I have no choice. The government is moving me if I like it or not. Two, don't belive everything you see or read from the media. Los Angeles is full of culture and some very wonderful people. Every town, city, or super city has it's problems. Drugs and gangs are everywhere you go, and fearing them gives them power. Power to dominate your media, minds, and freedoms. Besides, a good dose of fear keeps the red necks home. Less traffic to drive in.

So NO! I would not trade Los Angeles by choice for any other city in the U.S. As far as Tucson goes, and a few other comments go. If Tucson is such a "gods country" why do they have over 30 police frequencies for the city alone. Over 50 for State Police, and a trunking system for Pima

County that is said to be unmonitorable? Could it be the crime is so high they need that many police officers per person? What is Pima county Sheriff's office attempting to hide? Abuse, maybe? According to Tucsons page, it's only a town of 500,000. Looks like over kill to me. The city of Anaheim, home of Disneyland, and a polulation of only 389,000 only uses 2 frequencies for there police department. No Sheriff's or State police coverage is required.

Ha!

CQ CQ -

Hi all. I am attempting to write a Win95 based program for use by Ham Radio operators. Part of the program requires the program to determine where a Call Sign is from. To find the country I am using the ARRLS International call sign prefix page at http://www.arrl.org/awards/dxcc/allocation.html as a reference. The page gives information in the format:

```
-----------------------------------------------
| Call sign Series | Allocated to |
-------------------------------------------------------------------------
| AAA - ALZ | United States of America |
-------------------------------------------------------------------------
| 8PA-8PZ | Barbados |
-------------------------------------------------------------------------
```

etc...

I have made the following assumptions. Could some please tell me if these
assumptions are correct.

1) Any Call Sign Prefix with less than 3 charters is allocated to the country whose series includes that prefix if A's filled out the rest of the 3 charters.
[Example: AB --> same country as ABA]
2) Every Call Sign has a Single Digit Region number following the Prefix.
3) There is at MOST 1 (one) single digit Number in a Prefix.
4) NO suffix contains a number.

Summary of Assumptions:
==========
All Call Signs have the following format:

```
Prefix + Region# + Suffix
| | |
May have 1 Number <---+ | +----> May not contain a
Number
(one digit) |
\/
One Digit Number
```

Also, if anyone has a URL where I can get US region Number information besides: http://www.fcc.gov/wtb/amatur.html, or can point me in the

direction of a URL that shows foreign region information I would be
greatly
appreciative.

Thanks for all of the help,

I agree that it is very difficult to remember all the questions and answer in the test pool, but memorization is not what we are after. What we should be striving for is comprehension. After all, most of the questions are just reworded from other questions. So, if you know the basic law, what frequencies you can do what on, and electronic and radio theory, then I believe that you would have no problem answering all the questions.

At least we will see if that will work when I take the test next month...

A triple-conversion scanner is specifically designed to make images appear out of the passband of the receiver so you CAN'T hear these images.

If you live next to a cell tower, perhaps you might pick up cellular conversations all over the band, but generally this shouldn't be true on a properly working receiver.

This is the way radio operates and the laws of physics cannot be legislated. With all of the dual-conversion scanners Radio Shack sells (that CAN hear cell images plainly), I rather doubt there has been a recall on a triple-conversion for this reason!

3415. St. Louis A/P repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC

Source record: 197900

I am travelling to St. Louis this week, and would like to get some active
2 meter repeater freqs.

The ARRL Repeater Directory lists an open auto-patch at 147.000 pl 88.5
Anybody out there have directions for its use?

Primarily want to be able to contact someone if I get stuck, lost or the
rental car dies...

Although I frequently read the ng, please forward to my email as well.
dirwin@imap2.asu.edu

Thanks in advance.
Dave

I agree with Rich, for the LEOs, a J-pole is reasonable.
I can tell you that a discone sucks for satellite because
I have one and have tried. It appears to have a huge null
"on top". One thing I have given serious consideration is
building Quadrifilar Helical antennae for 2m and 70cm. These
are circularly polarized, omnidirectional, and have a bit of
gain over a dipole.
A discussion of QHA may be found at
http://www.ee.surrey.ac.uk/Personal/A.Agius/#QHA
There are other sources of info, QST had a construction article
for 2m or 70cm in the August 1996 issue (I believe).

My problem with the LEOs is that I can rarely *hear* them
well enough on 10m. I have a Kenwood TS-690 and a Cushcraft
R7 vertical antenna. I would like any and all advice as to
how to improve my 10m satellite receive capability!

Thanks
73

3417. New RF Compliance Program

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bc6615$2d794580$e6647392@kirk.ultranet.com>
Source record: 197902

QST DE N1LU:

I have just posted Version 1.1 of the RF Compliance Program first posted here a few weeks ago. This version produces a printed report of the results (not just the form although this feature was retained) and it permits you to load and store various profiles for different antennas.

Now it's easy to prepare and keep a file for each antenna and print a report for each to include in your log as evidence of compliance (assuming youu do of course!).

As usual, I did my best on this, but cannot gaurentee the results or the program etc....

The product is free to all Amateur Radio Operators for Amateur Station use.

You can get a copy (about 278K) from ftp.ultranet.com/pub0/u/umina

>operational element.

No it doesn't. If they use it, then it's pretty obvious that they
already know the code, and testing would serve no purpose whatsoever.

Since the other 60% doesn't use code, there's no need for them to know
it or be tested for it.

Wrong. The point is that *at this time*, code is required for access
to HF. If he wants to access those bands, he HAS to learn code.
Passing a 5WPM test is such a trivial matter these days that there's
no valid excuse for not doing it, *if* the person involved is really
interested in getting those privileges, and is not just whining for
the sake of whining.

>So you admit that it's just an "initiation rite"

Not only do I admit it, I practically invented the idea. IMO, the
"initiation rites" and its variations is the *only* valid argument for
retaining code testing. Whether or not that argument is good enough
to justify retention of the code test is another topic.

> ... that is NOT an appropriate
>reason for having a licensing requirement ... it is not the FCC's place to
>prop up ancient intitiation rites through the force of regulations ...
>That is EXACTLY why all Morse testing should be eliminated.

About 90% of the current test could be abolished using that logic.
The only legitimate interest the FCC has in licensing hams is to
insure that they know the rules. An open book test using the current

ARRL license guide would be good enough for that purpose.

>How do you know that? Do you have detailed statistics on how many

How do you know it isn't? Do YOU have any such stats? A gratuitous
claim can be refuted by an equally gratuitous rebuttal. It's up to
the original party to show that a significant number of people cannot
pass a code test after "years of failure." Besides, for the purposes
of this silly argument, a 5WPM test is sufficient, and I maintain that
is a relatively trivial task.

I have plenty of anecdotal evidence of people who have overcome
serious handicaps to get a ham license, even back in the days when
there were no legitimate no-code hams, and passing the CW tests was
far more difficult than it is nowadays. Code is hard for most people.
It was hard for me. For some it's harder. Same with the theory test.
You either deal with it, or you do something else. Whining won't help
a bit.
